Fourth Quarter 2015 Progress Report
October 1, 2015 through December 31, 2015
Whirlpool Facility - Fort Smith, Arkansas

1. INTRODUCTION

This quarterly report has been prepared in accordance with the Remedial Action Decision Document (RADD) issued by the Arkansas Department of Environmental Quality (ADEQ) on December 27, 2013 and updated on November 2015, for the Whirlpool Fort Smith, Arkansas, site (Site). This Fourth Quarter Progress Report (Report) is not forward looking. This report includes a description of the work completed during the fourth quarter of 2015, findings of the activities completed in this reporting period, issues identified and resolved, and deviations or schedule adjustments from plans and correspondence submitted to the ADEQ. Details supporting the Summary of Findings are provided in the documents attached to this Report.

2. SUMMARY OF FINDINGS

- Groundwater monitoring data suggests natural attenuation of trichloroethene (TCE) is continuing to occur via biological and other natural attenuation mechanisms in both onsite and offsite groundwater.
- The approximate location of the hydraulic divide between the north and south groundwater plume boundaries continued to be south of Ingersoll Avenue, which is generally consistent with previous reporting periods and historic results.
- The installation of eight sentinel wells to the south of the former manufacturing building has refined the understanding of the southern flow regime where the hydraulic gradient is gradual to the south beneath the facility but steepens to the east and southwest beyond the former manufacturing building.
- Fourth quarter groundwater monitoring data shows generally stable to decreasing trends for TCE concentrations.
  - Plume boundary well data continue to show results generally consistent with historical TCE concentrations although trends in the northern portion of the plume near MW-61R should continue to decrease due to in-situ chemical reduction (ISCR) injections.
  - Offsite groundwater data are similar to previous monitoring events and continue to show generally stable to decreasing TCE concentration trends.
  - Onsite groundwater data continue to show generally stable to decreasing TCE concentration trends. The data demonstrates the positive influence of the in-situ chemical oxidation (ISCO) injections.
- Based on fourth quarter groundwater data, the average minimum and maximum quantities of TCE in groundwater associated with the Site has been assessed for the north and south groundwater plumes. The quantity of TCE in the north plume is estimated to range from less than 1 gallon to 2 gallons, the quantity of TCE in the south plume is estimated to range from 8 to 30 gallons, and the quantity of TCE in the northeast plume is estimated to contain less than 1 gallon; for a combined volume of TCE in groundwater ranging from 10 to 33 gallons.

- Risk estimates for vapor intrusion from groundwater in the neighborhood are below ADEQ's risk management limits of 10^{-4} and 1 for cumulative cancer risk and non-cancer hazards, respectively.
- Vapor intrusion modeling using perched water and soil gas confirms the modeling results using volatile organic compound (VOC) concentrations in water collected from groundwater monitoring wells, except at Parcel 3 where concentrations of TCE in VP-9 increased from the previous quarter. Due to this increase, outdoor, crawl space, and indoor air were sampled. The absence of detectable plume-related constituents in the crawl space air at Parcel 3 indicates the vapor intrusion pathway from the groundwater plume is incomplete at this parcel.
- There are no known TCE impacts to offsite surface water or sediment.
- Monitoring to assess the impact of ISCO injection events measured decreases in TCE concentrations in groundwater source area wells, the supplemental neck area, and Areas 2 and 3 of approximately 62%, 83% and 83%, respectively from 2014 through 2015.
- Monitoring to assess the impact of ISCR injection has shown TCE concentration decreases in area wells by approximately 50%.

3. REVIEW OF ACTIVITIES COMPLETED – FOURTH QUARTER 2015

During the week of October 5, Fourth Quarter 2015 groundwater samples were collected via low flow sampling methodologies. Groundwater samples were collected from a total of 99 wells to assist in evaluating the entire Site including the northeast corner, Boys and Girls Club property, ISCO monitoring, ISCR pilot study monitoring, and plume definition. The groundwater samples were analyzed for parameters as outlined in the RADD except for perched groundwater wells and select temporary ISCR monitoring wells which were analyzed for VOCs only.

In addition to the RADD required sampling, additional groundwater samples were collected from select wells concurrent with the fourth quarter groundwater sampling event to evaluate the performance of ISCO and ISCR events completed in accordance with ADEQ approved permits. The data from the ISCO and ISCR performance monitoring is presented and evaluated in the Fourth Quarter 2015 Groundwater Monitoring Report (Attachment A), a detailed review of the fourth ISCO event including 30 and 60 day monitoring is provided in Attachment C (Fourth Oxidant Injection Summary Report), and a review of the ISCR event with 30 and 60 day monitoring is provided in Attachment D.

Key fourth quarter observations based on the groundwater monitoring data include the following:

- The groundwater potentiometric surface observed during the fourth quarter event is consistent with that historically observed at the Site except for the addition of a southwestern gradient in the southern plume identified due to the installation of sentinel wells.

- The direction of the lateral hydraulic gradient continues to be influenced by a divide located just south of Ingersoll Avenue with directions of the hydraulic gradient predominantly to the northeast and south on either side of the general divide.
  - Groundwater north of the divide is flowing in a northeasterly direction; and
  - Groundwater south of the divide is flowing in a south/southeasterly direction with a southwest component at the southwest corner of the facility.
- Fourth quarter event groundwater monitoring data shows predominantly stable to decreasing trends for TCE concentrations.
  - Plume boundary well data continue to show results predominantly consistent with historical TCE concentrations although trends in the northern portion of the plume near MW-61R are anticipated to decrease due to ISCR injections;
  - Offsite well data are similar to previous monitoring events and continue to show stable to decreasing TCE concentration trends; and
  - Onsite well data continue to show predominantly stable to decreasing TCE concentration trends; although, the data has been influenced by the ISCO injections.
- The chemical, geochemical and microbial data from the fourth quarter event are similar to the quarterly monitoring events in 2014 and 2015. The VOC results demonstrate that reductive dechlorination is occurring in various locations both on and offsite.
- The ISCO events performed in 2014 and 2015 continue to be effective with TCE concentration reductions through 2015 as follows:
  - Approximately 62% decrease at source area wells MW-25, MW-85 and MW-86;
  - Supplemental neck area decrease of approximately 83% since May 2014; and
  - Approximately 83% decrease at wells in Areas 2 and 3.
- The ISCR event performed in September/October 2015 is proving to be effective with TCE concentrations reducing as follows:
  - The sum of the TCE concentrations for MW-61R, TMW-10 and TMW-11, 60 days after ISCR injection, showed a decreasing concentration trend from approximately 238 micrograms per liter (µg/L) to 120 µg/L (~50% decrease).

During the fourth quarter of 2015, a soil vapor sampling event was completed on October 6, 7, and 9, 2015. Soil vapor samples were successfully collected from VP-7 and VP-9. Perched water filled the vapor points at locations VP-5, VP-6, VP-8, VP-10, VP-12, VP-14, and VP-15. The water in these vapor sampling points could not be purged from the sampling train. Water samples were collected from these points. Outdoor, crawl space, and indoor air samples were also collected at Parcel 3 to further evaluate the potential for groundwater vapor intrusion.

Key fourth quarter observations based on the soil vapor and shallow groundwater monitoring data include the following:

- Risk estimates for potential vapor intrusion from offsite groundwater into offsite residences are below ADEQ's risk management limits of 10^{-4} and 1 for cumulative cancer risk and non-cancer hazards, respectively.
- Vapor intrusion modeling using shallow water and soil gas samples collected, continues to confirm the modeling results using groundwater VOC concentrations collected from monitoring wells except at Parcel 3 where the absence of detectable plume-related constituents in the crawl space air indicates the vapor intrusion pathway from the groundwater plume is incomplete at this parcel.

The Fourth Quarter 2015 Soil Vapor Monitoring/Vapor Intrusion Report further discusses the sampling event as well as evaluates the water and soil vapor data. This report is included as Attachment B.

The fourth ISCO injection event was completed September 28 through October 2, 2015. During this event, approximately 9,000 gallons of base activated sodium persulfate (BASP) was introduced into the groundwater in the Supplemental Neck Area onsite in the north parking lot area south of Ingersoll Avenue and Areas 2 and 3 offsite north of Ingersoll Avenue. Further details regarding this injection event and associated monitoring are included in Attachment C.

The ISCR injection event was completed September 28 through October 2, 2015. Approximately 4,844 gallons of solution containing 7,500 pounds of ProvectIR-40™ [controlled release organic carbon, amendments and zero-valent iron (ZVI)], 660 pounds of magnesium oxide (MgO) and 13 L of Dehalococcoides (DHC) SDC-9 microbial consortium were introduced into the contaminated groundwater bearing zone in the area of MW-61R and TMW-11. The 60 day post injection monitoring results identify a more than a 98% reduction in TCE at TMW-11 which appears to be due to a combination of abiotic and biological reactions. The sum of TCE concentrations for MW-61R, TMW-10 and TMW-11, show a decreasing concentration trend from approximately 238 µg/L to 120 µg/L (~50% decrease). Based upon 60 day monitoring results, the TCE concentration at MW-61R is at the remedial action level (RAL) (a decrease of almost 70%) and the concentration at TMW-11 is less than the RAL. Further details regarding the ISCR injection event and associated monitoring can be found in Attachment D.

4. QUANTITY OF TCE

Estimated average minimum and maximum quantities of TCE in groundwater were calculated for the Site using the results of the fourth quarter groundwater monitoring event. The distinction between the north and south groundwater plumes is identified based upon the consistent groundwater divide north of the Whirlpool manufacturing facility and south of Ingersoll Avenue and the reduction or elimination of TCE in groundwater near the hydraulic barrier. The quantity of TCE calculations are based on separating the northern and southern plumes at the hydraulic divide at the location of MW-24 (see Figures 2A and 2B, Attachment A – Fourth Quarter 2015 Groundwater Monitoring Report). The northeast plume is also included.

The estimated quantities of TCE included calculation of the volume of groundwater based upon the distinct areas within the plumes (i.e. area of plume within the isoconcentration lines on Figures 2A and 2B of Attachment A), average saturated thickness and total porosity (i.e. area x average saturated thickness x porosity = volume of water). The volume of water and minimum and maximum TCE concentrations based upon the plume boundaries were used to calculate the mass of TCE within each section of the plume. The volume of TCE was then determined based upon the specific gravity of TCE. Parameters used in the calculation of TCE quantities are presented below. Calculations are presented in Attachment E, Table 2.

Northern plume parameters:

- Plume area of approximately 455,000 square feet (ft^2) consisting of 303,000 ft^2 for the portion of the plume with TCE concentrations ranging from 5 µg/L to 100 µg/L; 152,000 ft^2 for the portion of the plume with TCE concentrations ranging from 100 µg/L to 1,000 µg/L (a decrease of almost 24% compared to the 2014 Fourth Quarter); and no portion of the plume exhibits TCE concentrations greater than 1,000 µg/L;
- Average saturated thickness of 3.7 feet (see Attachment E, Table 1);
- Total porosity of 0.4; and
- TCE specific gravity of 1.465.

Southern plume parameters:

- Plume area of approximately 1,067,000 ft^2 consisting of approximately 452,000 ft^2 for the portion of the plume with TCE concentrations ranging from 5 µg/L to 100 µg/L; 411,000 ft^2 for the portion of the plume with TCE concentrations ranging from 100 µg/L to 1,000 µg/L; 178,000 ft^2 for the portion of the plume with TCE concentrations ranging from 1,000 µg/L to 10,000 µg/L; and 26,000 ft^2 for the portion of the plume with TCE concentrations greater than 10,000 µg/L, (the southern plume has been modified due to the installation of down-gradient well MW-182 and further down gradient sentinel wells);
- Average saturated thickness of 8.3 feet (see Attachment E, Table 1);
- Total porosity of 0.4; and
- TCE specific gravity of 1.465.

Northeastern plume parameters:

- Plume area of approximately 237,000 ft^2 consisting of 160,000 ft^2 for the portion of the plume with TCE concentrations ranging from 5 µg/L to 100 µg/L; and, 77,000 ft^2 for the portion of the plume with TCE concentrations ranging from 100 µg/L to 1,000 µg/L;
- Average saturated thickness of 4.4 feet (see Attachment E, Table 1);
- Total porosity of 0.4; and
- TCE specific gravity of 1.465.

Based on the plume information listed above, the following ranges of the quantities of TCE distributed throughout the respective plumes were calculated:

Plume Location	Calculated Minimum Volume	Calculated Maximum Volume
Northern Plume	Less than 1 gallon	2 gallons
Southern Plume	8 gallons	30 gallons
Northeastern Plume	Less than 1 gallon	Less than 1 gallon

Therefore the total average minimum and maximum quantities of TCE in groundwater associated with the Site are approximately 10 to 33 gallons of TCE.

5. DATA AVAILABLE IN THIS QUARTER

Analytical data for the 99 wells sampled, including water levels from this sampling event, are included in the Fourth Quarter 2015 Groundwater Monitoring Report included as Attachment A.

Analytical data for the soil vapor monitoring are included in the Fourth Quarter 2015 Soil Vapor Monitoring/Vapor Intrusion Report included as Attachment B.

Baseline, injection, and 30 and 60 day post injection monitoring data for the ISCO and ISCR injection events are included as Attachments C and D.

Calculations for the estimation of TCE mass for the fourth quarter are included as Attachment E.

6. ISSUES ENCOUNTERED AND RESOLUTION

No issues where encountered during the fourth quarter of 2015.

7. SCHEDULE

There are no schedule deviations to report in the fourth quarter of 2015.

1 Introduction

Ramboll Environ US Corporation (Ramboll Environ) has prepared this Fourth Quarter 2015 Groundwater Monitoring Report (Report) for the Fort Smith, Arkansas, Site (Site) on behalf of Whirlpool Corporation (Whirlpool). The work was performed and the report prepared in accordance with the November 2015, Remedial Action Decision Document (RADD) issued by the Arkansas Department of Environmental Quality (ADEQ) and ADEQ comment letters and Ramboll Environ/Whirlpool responses to previous quarterly monitoring reports[1].

Whirlpool has been monitoring the groundwater at the Site since 1989. This report is Attachment A of the Fourth Quarter 2015 Progress Report for the Site.

This report describes the results of the groundwater monitoring event performed between October 5 and October 9, 2015. This event included measuring water levels on October 5th from 107 wells and collection of groundwater samples from 99 wells consisting of 76 wells denoted as plume boundary, onsite, or offsite wells according to the RADD plus two wells sampled on the Boys and Girls Club property (MW-183 and MW-184), four wells sampled for in-situ chemical oxidation (ISCO) monitoring (MW-23, MW-24, MW-81, MW-82), two wells sampled for in-situ chemical reduction (ISCR) (TMW-10 and TMW-11) and fifteen additional wells sampled to support the evaluation of the source area, plume boundary and shallow groundwater.

On November 4 and 5, 2015 (30 days following the injection events) and again on December 1 and 2, 2015 (60 days following the injection events) groundwater sampling was completed to assess the performance of the ISCO and ISCR remediation efforts.

ADEQ Comments on the First Quarter 2015 Progress Report dated August 3, 2015, and Ramboll Environ/Whirlpool responses dated September 9, 2015. ADEQ Comments on the Second Quarter 2015 Progress Report dated September 14, 2015, and Ramboll Environ/Whirlpool responses dated October 16, 2015. ADEQ Comments on the Third Quarter 2015 Progress Report dated December 10, 2015, and Ramboll Environ/Whirlpool responses dated January 13, 2016.

2 Groundwater Sample Collection and Onsite Activities

Ramboll Environ performed the Fourth Quarter 2015 Groundwater Monitoring Event (Fourth Quarter event) on behalf of Whirlpool during the week of October 5, 2015. Activities performed during the monitoring event included measuring water levels in site wells and collecting groundwater samples for analysis of volatile organic compounds (VOCs) and monitored natural attenuation (MNA) parameters.

Constituents of concern (COCs) as identified by the RADD in groundwater for this Site include trichloroethene (TCE) and related degradation (i.e. daughter) products (Table 1). The groundwater monitoring wells listed in the RADD for compliance with quarterly monitoring are listed in Table 2. The COCs and additional geochemical parameters were analyzed in collected groundwater samples to evaluate the effectiveness of MNA in support of the natural degradation of site related chlorinated compounds.

The following sections describe the groundwater monitoring activities completed during the Fourth Quarter event.

2.1 Static Water Level Measurements

On October 5, 2015, static water levels and total well depths were measured in a total of 107 monitoring wells. Monitoring wells were opened to allow water levels to equilibrate to atmospheric conditions prior to their measurement using an electronic water level meter. The instrument was calibrated by the manufacturer prior to its purchase and therefore does not require calibration in the field. The water levels were measured to the nearest 0.01 foot (ft) with an accuracy of 0.02 ft per the manufacturer's specification. The water level meter probe and tape (i.e. the only non-dedicated sampling equipment) were decontaminated prior to use at each well by spraying and scrubbing the probe and tape with Alconox detergent mixed with distilled water and then rinsing the probe and tape with distilled water prior to being wiped dry.

The Fourth Quarter event static water level measurements are presented in Table 3 along with ten previous water level measurements recorded from project wells.

2.2 Monitoring Well Sampling

After static water level measurement activities were completed, low-flow sampling was performed at each well via the use of a peristaltic pump and dedicated polyethylene tubing. The tubing was placed at a depth within the well approximately equal to the midpoint of the well screen. The wells were then purged, via United States Environmental Protection Agency (USEPA) Low Stress (low flow) purging procedures (USEPA, 1996); at a rate generally less than 0.1 liters (L) per minute to minimize the amount of drawdown in the well and to reduce the likelihood of elevated turbidity. Flow rates and drawdown were checked continuously during purging. Purge water was then placed into a container prior to transfer to the onsite water holding tank for ultimate proper disposal.

Water quality parameters were measured via a water quality probe and flow thru cell. Instruments were calibrated daily prior to the start of sampling. All instruments were calibrated at a minimum of once per day. Calibration logs are included as Appendix A. Readings were recorded approximately every five minutes until the parameters stabilized. Stabilization was considered obtained when three consecutive rounds of parameter readings met the following:

- Turbidity: +/- 10% for values greater than 10 Nephelometric Turbidity Unit (NTU), or less than 10 NTU;
- Dissolved Oxygen (DO): +/- 10% for values greater than 0.5 milligrams per liter (mg/L);
- Specific Conductance: +/- 3%;
- Temperature: +/- 1^{o}C;
- pH: Within +/- 0.1 standard units; and
- Oxidation Reduction Potential (ORP): Within +/- 10 millivolts (mV).

Table 4 presents a summary of results for measured field parameters for the 2015 Fourth Quarter event.

The groundwater samples were obtained by directly filling the laboratory provided sampling bottles from the pump discharge. VOCs were collected in three 40 milliliter (mL) glass vials that contained hydrochloric acid as a preservative per standard procedures. Samples for assessing Quality Assurance/Quality Control (QA/QC) metrics were collected by alternately filling investigative and QA/QC sample bottles for each parameter. VOC sample bottles for both the investigative and the QA/QC sample were completely filled, purged of headspace and sealed. All other samples (i.e. for non VOC analysis) were collected in appropriate bottles as specified by the method and/or laboratory. Hach Test Kits (all verified with valid expiration dates) were used to measure ferrous iron in the field. Groundwater samples for analysis of dissolved hydrogen concentration were collected by the Microseeps gas stripping procedure (2014 Microseeps).

A total of 99 groundwater samples, ten field duplicate samples, five matrix spike/matrix spike duplicate (MS/MSD) samples and seven equipment blanks were collected during the 2015 Fourth Quarter event (i.e. week of October 5). Duplicate samples were taken at a frequency of one duplicate sample per 10 groundwater monitoring samples. Duplicate samples were collected from ITMW-9, ITMW-10, ITMW-13, ITMW-18, IW-74, MW-33R, MW-40R, MW-41R, MW-61R and MW-91.

Because monitoring wells contain dedicated or new tubing, the only equipment transferred and used from well to well is the water level meter used to monitor well water levels during purging and stabilization prior to sampling. Equipment rinsate blanks were collected after each of the seven water level meters used during the monitoring event were decontaminated to evaluate field decontamination procedures. Equipment rinsate blanks were collected by pouring ASTM Type II deionized water over the decontaminated water level meter probe and tape into the appropriate sample containers. The rinsate blanks were collected after decontamination procedures at MW-187 (EB-01-201510 at 17:00), MW-66R (EB-02-201510 at 17:25), MW-29 (EB-03-2010510 at 17:25), MW-172 (EB-04-201510 at 16:51),MW-24 (EB-06-201510 at 18:00) MW-38 (EB-07-201510 at 17:50) and ITMW-12 (EB-08-201510 at 17:30). The preservation and

analysis of the equipment rinsate blanks was identical to those of the associated environmental samples.

Sample containers were labeled and packed on ice in insulated coolers before being shipped under chain of custody via overnight courier or FedEx to Pace Analytical Services in Lenexa, Kansas (VOC and MNA parameters), via FedEx to Microseeps in Pittsburg, Pennsylvania and via FedEx to Microbial Insights in Knoxville, Tennessee (Microbial parameters). Chain of custody procedures were followed from the point of sample collection through completion of analysis. The laboratories used infrared thermometers to take sample temperatures upon sample receipt in accordance with USEPA "Manual for the Certification of Laboratories Analyzing Drinking Water" fifth edition.

2.3 Other Site Monitoring Activities

During this quarter groundwater samples were also collected from MW-173 through MW-178 and MW-180. These wells are screened shallow to assist in evaluating the potential for vapor intrusion from groundwater and as such the data from these wells is further discussed in Attachment B, Fourth Quarter 2015 Soil Vapor Monitoring and Vapor Intrusion Assessment Report.

Due to slow recovery rates, low-flow sampling techniques were not used at MW-173, MW-174, MW-178 and MW-180. These wells were purged dry once and were then allowed to recover prior to collection of the sample. The recovery rates and subsequent sampling for the indicated wells were all less than 24 hours. Adequate sample volume was present for all analytical fractions from the wells designated for sampling with the exception of MW-181 for VOC analysis and MW-97, MW-98 and MW-193 for Hydrogen analysis. A Hydrogen sample was not collected from MW-185 due to a highly turbid water matrix which plugged the intake to the Bubble Stripping cell. Microseeps laboratory noted on their sample acknowledgement form that they did not receive sample containers for methane, ethene, ethane and acetylene (MEE-A) analysis for one sample, MW-84 which was noted on the chain of custody (COC). The sample was collected and noted on the COC, however it was not located by the laboratory and therefore analysis results for MEE-A are not available. See Section 3.4 Data Quality Assessment for additional information.

During the fourth quarter an ISCO event was completed between September 28 and October 2, 2015. During this event 9,000 gallons of BASP were injected into nine injection wells and 36 temporary direct push injection points located in Supplemental Neck Area and Areas 2 and 3. A detailed review of this event is further discussed in Attachment C, Fourth Oxidant Injection Summary Report.

Also completed from September 29 through October 2, 2015, was an ISCR event where 4,844 gallons of solution containing 7,500 lbs. of ProvectIR-40™, 660 pounds magnesium oxide and 13 L Dehalococcoides (DHC) inoculum were injected into 44 temporary direct push injection points. This event is further discussed in Attachment D, ISCR Pilot Study Report.

Groundwater sampling of select wells was completed as part of the 30-day (November 2015) and 60-day (December 2015) performance monitoring of the ISCO and ISCR events. The analytical results from the performance monitoring for ISCO are included in Tables 1C and 1D of Attachment C – Fourth Oxidant Injection Summary Report. The analytical results from the performance monitoring for ISCR are included in Table 2 of Attachment D – In-situ Chemical Reduction Pilot Study Report.

Aquifer hydraulic testing was completed during this quarter on October 1, 22 and 23, 2015, which included the completion of slug testing at eight wells. The eight wells that were included in this testing are MW-188, MW-189, TMW-10, TMW-11, MW-67R, MW-184, MW-186 and MW-193. Slug tests were conducted at each well by quickly lowering (falling head test) or removing (rising head test) the slug into or out of the well, resulting in an instantaneous change in water level. The slugs were raised and lowered using a custom well sampling reel equipped with Teflon-coated stainless-steel cable, which allowed raising and lowering the slugs in a matter of seconds once the slug was positioned in the well. Water levels were monitored using Level TROLL 700 transducers with an integral data logger. Transducers were securely deployed below the static water level in the well below the maximum depth of slug travel by a direct-read cable allowing real-time viewing of data. Manual water level measurements were recorded using an electronic water level indicator to the nearest 0.01 foot before testing to determine the static water level, as well as during the tests to confirm the transducer data. The observed initial water level displacement was compared to the expected initial displacement based on the volume of the slug used. Data logging generally continued until the groundwater level in the well stabilized.

3 Results

The following sections present a discussion of the hydrogeology, analytical methods, the results of the laboratory analyses and an assessment of data quality and usability.

3.1 Hydrogeology

Gradient

Water levels from 107 wells at the Site were collected during the Fourth Quarter event (Table 3) as discussed in Section 2.1. These wells were monitored during this event to provide potentiometric information regarding groundwater flow direction at the Site.

The static water level measured in the wells ranged from less than a foot to just over 20 ft below top of the well casing (btwc) during the monitoring event. Figure 1A shows the contours of the groundwater elevations based on the monitoring well static water level measurements completed on October 5, 2015, for this Fourth Quarter event. Based on the current potentiometric maps, the lateral hydraulic gradient, as an indication of the likely direction of groundwater flow, appears to be generally consistent with historical conditions, including the presence of a groundwater gradient divide that trends east to west north of the facility building. As illustrated on the figure, the hydraulic gradient is near zero in the area that extends from the western portion of the north parking lot near Ingersoll Avenue to just north of Jacobs Avenue. North of Jacobs Avenue, the hydraulic gradient is directed to the north/northeast. South of this flat area, near the facility building, the direction of the hydraulic gradient is to the southeast, then south. The hydraulic gradient is gradual to the south beneath the facility but steepens to the east and southwest beyond the extent of the former manufacturing building. The installation of eight additional (sentinel) wells to the south has refined the understanding of the southern flow regime (Ramboll Environ, 2015).

The water level data collected in October characterizes a southwest component to the groundwater gradient previously suggested after the installation of MW-182. Since the data set includes only one set of water level measurements, a linear interpolation of the gradient between three groups of wells was completed in order to assess the groundwater flow direction and gradients from MW-25 to MW-192, MW-182 to MW-186, ITMW-5 to MW-187. Although the gradient remains relatively flat beneath the building (i.e. 0.0009 feet/foot), the gradient steepens somewhat towards the southwest at the southwest corner of the building. The gradient increases from 0.004 feet/foot to 0.013 feet/foot towards the southwest based upon the October 2015 water level measurements.

Shallow Monitoring Wells

Groundwater elevations from shallow groundwater wells (MW-173 through MW-177 and MW-181 located along the north side of Jacobs Avenue and MW-178 through MW-180 located immediately south of Ingersoll Avenue) were used to evaluate horizontal gradient. Static water levels along Jacobs Avenue decrease from west to east; from a high of 465.34 ft at MW-177 to a low of 461.75 ft at MW-174. The highest shallow groundwater elevations were measured in

MW-178 and MW-180 (471.48 ft and 471.46 ft, respectively). These results suggest that the shallow groundwater horizontal flow gradient mimics the deeper groundwater flow gradient to the east/northeast. The number and location of shallow groundwater monitoring wells limit this interpretation.

Groundwater elevations from shallow groundwater wells (MW-173 through MW-177 and MW-181 located along the north side of Jacobs Avenue and MW-178 through MW-180 located immediately south of Ingersoll Avenue) were also compared to groundwater elevations from nearby deeper monitoring wells to evaluate vertical gradient. MW-175 is located approximately at the midpoint between deeper groundwater monitoring wells MW-46R and MW-56 allowing the comparison of groundwater elevations at MW-175 to the average of the groundwater elevations at MW-46R and MW-56. The vertical gradients are summarized in Table 5. Based on this evaluation observations are as follows:

- Downward vertical gradient at the western well grouping MW-178/MW-83;
- Slight downward gradient (-0.02 feet/foot) at MW-177/MW-70;
- Slight upward gradient (0.04 feet/foot) at MW-176/MW-46R;
- Slight downward gradient (-0.07 feet/foot) at MW-175/MW-46R and MW-56; and
- Slight upward gradient (0.06) at the eastern most well pairing, MW-174/MW-63.

As shown on Figure 1B, the difference in vertical gradients observed during the fourth quarter sampling event were less at three of the five locations but generally consistent with the previous (third quarter) sampling event at the well groupings evaluated.

The observed vertical gradients suggest that the vertical gradients vary over time but there is a general trend by location. For the fourth quarter, there is a downward hydraulic gradient between the silty clayey sand interval and Basal Transmissive Zone to the west that becomes nearly neutral (less than 0.1 feet/foot difference), then slightly upward to the east. The second and third quarter differences at each set of wells used for the comparison were generally larger in magnitude. Additionally, some evidence suggests that the shallow zone and the Basal Transmissive Zone are connected hydraulically as indicated by similar horizontal gradients and the presence of TCE contamination in both zones.

Hydraulic Conductivity Testing

The monitoring wells used for the hydraulic conductivity testing are constructed with five and ten foot screened intervals (Well Construction Details, Appendix D). The subsurface profile and amount of saturation varied for the three areas tested as follows:

- **Northeast:** Saturated soils were noted only in the Basal Transmissive Zone comprised of 3 to 5 ft of clayey gravel at TMW-10 and TMW-11. The clay in the Basal zone that included coarser material in MW-193 and MW-67R was not noted as wet or saturated.
- **East:** Approximately 5.5 ft of gravel with sand and silty clay were observed at MW-184 in the Basal zone but no saturation is indicated in the Basal Zone or fine grained soil above.

- **South:** At MW-186, approximately 3 ft of wet coarse Basal Zone is noted overlain with clayey sand, at MW-188 5 ft of wet soils are noted in coarse gravels with sand and clay overlain with clayey sand. At MW-189 approximately 10.5 ft of wet gravel with sand and silty clay was observed. The wet soils extend upward for several feet in the clayey sands over the Basal gravels.

The response data from the October 2015 slug tests was used to estimate hydraulic conductivity (K) using the KGS and/or Bouwer-Rice curve fitting methods as implemented by AQTESOLV software (HydroSOLVE, Inc.). Graphic output results are included in Appendix D. For these methods, the saturated thickness of the shallow aquifer at each well location was assumed to be the difference between the water level measured at the well just prior to the slug test and the depth of the well. The aquifer was assumed to be unconfined, isotropic and of uniform thickness at each well.

Other input parameters required for each analysis included the casing radius, position of the screened interval and the effective radius of the well, which was set to the outer radius of the filter pack, as recommended by Butler (1998). When the KGS model was used, the specific storage (Ss) parameter was constrained to the typical range for alluvium aquifer (1E-06 to 1E-05 ft^{-1}). The KGS model was fit to the entire set of response data and the Bouwer-Rice data was fit to data in the recommended normalized head range (20 – 30% recovery) to reduce effects resulting from the filter pack material (Butler 1998).

Recovery from the falling-head test occurred within a reasonable time frame and the rising head test was initiated upon achieving close to full recovery from the falling head test, for all wells except for MW-67R, where the falling head test could not be conducted due to shallow groundwater conditions. Once it was determined the falling head test could not be conducted in well MW-67R, the transducer and slug were left in the well overnight to allow the well to equilibrate for the rising test. The next morning (October 23, 2015), the rising head test was conducted. However, due to the results not falling under a normalized range the estimates of K for this well were inconclusive.

The K estimates for the unconfined analysis for the remaining seven wells range from 0.09 ft/day [3.17E-05 centimeters per second (cm/sec)] at MW-193 to 4.48 ft/day (1.58E-03 cm/sec) at MW-189. The results generally showed a reasonable level of consistency between falling head and rising head K estimates and between K estimates from the two analytical models used.

The test data was also analyzed assuming the confined aquifer method by the KGS and Bouwer-Rice curve fitting methods for both the falling and rising head data sets. The K estimates are consistent with results from unconfined method and range from 0.11 ft/day (3.88E-05 cm/sec) in MW-193 to 4.86 ft/day (1.71E-03 cm/sec) in MW-189.

For wells, TMW-11, MW-193, MW-186 and MW-188, the well screen interval exceeds the observed saturated interval in the boring log. The screen interval includes a portion of the fine grained soils above the observed water bearing sediments. Hence for these wells, the KGS and Bouwer-Rice curve fitting methods for both the falling and rising head data sets were evaluated

under confined state for the part of the screen interval that was observed to be saturated in the Basal Transmissive Zone. For this set of tests, it is assumed that the non-saturated soils intersected by the screen is cased. The K estimates are consistent with results from unconfined method and range from 0.19 ft/day (6.7E-05 cm/sec) in MW-193 to 4.38 ft/day (1.55E-03 cm/sec) in MW-188.

For wells, MW-188, TMW-11, MW-67R, MW-186 and MW-193, the well screen is partly covered with coarse grained geologic unit. Hence for these wells, the KGS and Bouwer-Rice curve fitting methods for both the falling and rising head data sets were evaluated under confined state for

$$K_h \text{ avg} = \sum_{m=1}^{n} \frac{K_{hm} b_m}{b}$$

the part of the screen interval where coarse grained unit exist. For this set of tests, it is assumed that the fine grained unit part of screen is cased. The K estimates are consistent with results from unconfined method and range from 0.01 to 4.38 ft/day (3.53E-06 to 1.54E-03 cm/sec). For these wells, the hydraulic conductivity of coarse grained unit was also estimated using the method described in Fetter, 1994; where an equivalent horizontal conductivity in layered aquifer (each unit having a different hydraulic conductivity) is found from the summation below:

Where,

K_h avg is the average horizontal hydraulic conductivity
K_{hm} is the horizontal hydraulic conductivity of the m^{th} layer
$_{bm}$ is the thickness of the m^{th} layer; and
b is the total aquifer thickness

The estimated thickness of the coarse grained unit is provided in Table 6. For these estimates, it was assumed that the coarse grained unit is an order of magnitude higher conductivity than the fine grained unit. The average horizontal hydraulic conductivity (K_h avg) is the average of hydraulic conductivity estimates for each well for falling/rising tests for Bouwer-Rice and KGS method under confined state as described above. These average values of hydraulic conductivity for each well are shown in Table 7. The estimated hydraulic conductivities for the coarse grained unit using Fetter's method (Fetter 1994) range from 0.01 to 3.87 ft/day (3.53E-06 to 1.36E-03 cm/sec). The values are consistent with the other estimates from different methods (as described before) and are considered reliable for use in the groundwater model for the site.

3.2 Analytical Methods

Seventy-six groundwater samples were collected from plume boundary wells, onsite wells, offsite wells and were analyzed for the following parameters in accordance with the indicated laboratory methods:

- VOCs: SW846 5030B/8260B
- Chloroethanol: SW846 8015
- Total Iron: SW846 6010
- Total Manganese: SW846 6010
- Alkalinity: SM 2320B

- Ferric Iron: SM 3500-Fe B#4
- Sulfide: SM 4500-H+B
- Sulfate: EPA 300.0
- Chloride: EPA 300.0
- Ammonia: EPA 350.1
- Nitrate: EPA 353.2
- Nitrite: EPA 353.2
- Total Nitrogen: EPA 353.2
- Carbon Dioxide: SM 4500-CO2 D
- Total Organic Carbon: SM 5310C
- Phosphate: SM 4500P-E
- Volatile Fatty Acids: AM21G
- Methane: AM20GAX
- Ethane: AM20GAX
- Ethene: AM20GAX
- Acetylene: AM20GAX
- Hydrogen: AM20GAX

Twenty-two groundwater samples were collected from wells not specifically mentioned in the RADD and were analyzed for the following parameters in accordance with the indicated laboratory methods:

- VOCs: SW846 5030B/8260B

The analytical methods listed above are contained in the USEPA's Test Methods for Evaluating Solid Waste (SW-846 Third Edition, 1983); the American Public Health Association (APHA), American Water Works Association (AWWA) and Water Environment Federation (WEF) Joint Editorial Board's Standard Methods for the Examination of Water and Wastewater (SM 2 First Edition, 2005); and Analysis of Dissolved Methane, Ethane and Ethylene in Groundwater by the laboratory modified AM20GAX Standard Gas Chromatographic Technique published in the RSKSOP-175 SOP that was prepared for the use of the Groundwater Ecosystems Restoration Division of the USEPA.

3.3 Analytical Results

All VOC analytical data from plume boundary wells, onsite wells and offsite wells were subjected to data validation in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Review (June 2008). The laboratory analytical reports for the samples are presented in Appendix B. Summaries of analytical results (i.e. detected compounds) for samples collected during the Fourth Quarter event are presented in Table 8. This table includes data qualifiers that may have been assigned from validation. A discussion of the field and laboratory analytical results for this event is presented below.

3.3.1 VOC Results

This section presents an evaluation of the VOC data that were collected from the Site during the 2015 Fourth Quarter event. TCE results for the Fourth Quarter (October groundwater sampling event) are presented on Figures 2A and 2B.

Plume Boundary Wells

As noted within the RADD, 27 monitoring wells are identified as plume boundary wells (Table 2) at the Site. During this quarter an additional well (MW-23) was sampled to assist in the boundary evaluation. VOC concentrations were detected above the RADD remedial action levels (RALs) (Table 1) in three of the 28 samples collected from the plume boundary wells. Tabulated VOC concentrations measured in these wells during the 2015 Fourth Quarter event are presented in Table 8.

Notable results from the fourth quarter sampling event include:

- ITMW-6: 1,1-Dichloroethane (1,1-DCA) concentration of 4.3 micrograms per liter (µg/L) (this result is consistent with historical ranges for ITMW-6 and is lower than the highest concentration of 1,1-dichloroethane in October 2013 at 6.7 µg/L);
- MW-36R: Bromomethane concentration of 48.1 µg/L; and
- MW-61R: TCE concentrations of 13.3 µg/L (Note: December 60-day post ISCR injection performance results indicate a concentration of 5 µg/L in MW-61R).

Consistent with historical analytical results for the Site, all other plume boundary well VOC results were reported as non-detect or at concentrations less than RALs.

The highest concentration of TCE in a boundary well at 13.3 µg/L in this fourth quarter event was detected in the sample from MW-61R located south of Jacobs Avenue. The concentration of TCE in this well is declining from the highest level of TCE (16.5 µg/L) in the third quarter of 2015. A well (MW-193) down-gradient of MW-61R was installed during the week of September 14, 2015. The TCE concentration at MW-193 was non-detect during the fourth quarter event.

Offsite Wells

In accordance with the RADD, 14 monitoring wells are identified as offsite wells (Table 2). The offsite wells include those installed at offsite properties to the north and northeast of the Whirlpool northern property boundary that are not otherwise identified as plume boundary wells. Tabulated VOC concentrations measured in the 14 offsite monitoring wells during the 2015 fourth quarter event are presented in Table 8. Temporary wells, TMW-10 and TMW-11, were installed the week prior to the fourth quarter sampling event for the purpose of monitoring ISCR performance. These wells were sampled during the fourth quarter event and are included in the offsite well evaluation.

During the fourth quarter event, the highest concentration of TCE detected in groundwater samples from the offsite wells was 400 µg/L collected from MW-57R. This is slightly down from

the highest concentration documented at this location (409 µg/L) during the third quarter of 2015. Just up-gradient of MW-57R, trends are decreasing at MW-46R and MW-41R. MW-46R went from a high of 680 µg/L in March of 2011 to a current concentration of 371 µg/L. The highest TCE concentration (1,170 µg/L) identified at MW-41R was identified in April of 2005 while the current concentration of 48.7 µg/L is fairly consistent with the third quarter 2015 result of 43 µg/L.

Onsite Wells

In accordance with the RADD, 35 monitoring wells are identified as onsite wells (Table 2). Onsite wells designated by the RADD do not include wells identified as plume boundary wells that are located onsite. Onsite wells include specific wells north of Ingersoll Avenue and some wells south of Ingersoll Avenue which are north of the Whirlpool northern property fence line, but still located on property owned by Whirlpool Corporation. The remaining onsite wells are located along the perimeter of the former Whirlpool manufacturing facility, within the source area, or south of the source area which includes wells immediately adjacent to the Whirlpool manufacturing building. Tabulated VOC concentrations measured in onsite wells during the fourth quarter event are presented in Table 8.

VOCs were detected above the RADD RALs in 29 of the 35 groundwater samples collected from onsite wells. Parameters exceeding RALs include: TCE in all onsite wells (except for ITMW-14, MW-34R, MW-65, MW-84, MW-88 and MW-90), bromomethane in five wells, 1,1-dichloroethane (1,1-DCA) in three wells, 1,1-dichloroethene (1,1-DCE) in six wells, cis-1,2-dichloroethene (cis-1,2-DCE) in six wells, trans-1,2-dichloroethene (trans-1,2-DCE) in one well, methylene chloride in two wells, 1,1,2,2-tetrachloroethane (1,1,2,2-TCA) in eight wells, tetrachloroethene (PCE) in six wells and vinyl chloride (VC) in five wells.

During the 2015 fourth quarter event, the maximum onsite TCE concentration measured was 131,000 µg/L at MW-86. MW-86 is located in the linear drainage feature which is the predominant source area onsite. The fourth quarter 2015 concentration of TCE at MW-86 is over 75 percent lower than the highest concentration of 533,000 µg/L in May of 2014. The TCE concentration has varied since 2014 due to ISCO efforts within this area. These results further document the successful ISCO remediation events performed at the site.

The concentration of the daughter products (cis-1,2-DCE and 1,1-DCE) are also highest in the wells in the source area and immediately surrounding the source area. The highest concentration of VC continues to be detected at MW-38.

Figures 3 and 4 depict trends in TCE concentration at select onsite wells. Figure 3 depicts TCE concentrations at ITMW-17, ITMW-19 and MW-25 over time on a logarithmic scale. The linear trend for TCE concentration is generally stable to decreasing at these three wells. Figure 4 depicts TCE concentrations at the northern onsite wells (MW-33R, MW-34R and MW-35R along Ingersoll Avenue) over time on a logarithmic scale. The concentration results for MW-34R and MW-35R exhibit stable to decreasing linear trends. The October 2015 TCE concentration from MW-34R (4.5 µg/L) continues to remain below the RAL along with the third quarter 2015 result of 3.5 µg/L since monitoring began in 2001. MW-33R has shown fluctuation in TCE

concentrations over time; however, the current TCE result of 562 µg/L is approximately 1/3 of the maximum detected concentration of 1,700 µg/L, measured in September of 2007.

Northeast Corner Wells

As discussed in the Northeast Corner Investigation Report (dated December 8, 2014), wells were installed at the northeast corner of the Whirlpool property and on the Boys and Girls Club property. These wells (MW-87 through MW-91, MW-96 through MW-99 and MW-183 and MW-184) were installed to identify and delineate TCE impacts at or near the northeast corner of the Site. Analytical results from these wells are included in Table 8. As stated in the Response to ADEQ Correspondence Dated August 3, 2015 regarding the First Quarter 2015 Progress Report, these wells were sampled for VOCs and MNA parameters during the fourth quarter 2015 sampling event and will continue to be sampled for these parameters during subsequent quarters subject to any future ADEQ-approved changes.

During the fourth quarter event, samples were collected from these wells as shown on Figure 2A and the samples were analyzed for VOCs. Wells MW-97 through MW-99, located on the Boys and Girls Club property, were non-detect for VOCs except for one unqualified detection of 2-butanone. MW-88 and MW-90 are located north of the manufacturing building northeast corner and neither well contained detectable levels of VOCs except for one unqualified value of chloromethane at MW-88. MW-89 contained TCE at a concentration of 12.7 µg/L which is comparable with the level identified during the initial northeast corner investigation in June 2014. The TCE concentrations in MW-87 and MW-91 have decreased as compared to the third quarter 2015 event. TCE concentrations in MW-96 through MW-99 on the Boys and Girls Club property are below detection limits. Wells MW-183 and MW-184 were installed in late September 2015. TCE was below RALs in MW-183 and non-detect in MW-184 in the fourth quarter.

3.3.2 Monitored Natural Attenuation Results

In accordance with the Revised RADD, 76 monitoring wells are noted as plume boundary, onsite, or offsite wells which are monitored for natural attenuation parameters. During the fourth quarter event, 23 additional wells (not listed in the RADD) were monitored for field natural attenuation parameters and VOCs. Tabulated results are presented in Table 8.

This section presents the natural attenuation data collected from the Site during the 2015 fourth quarter event.

The USEPA documents “Technical Protocol for Evaluating Natural Attenuation of Chlorinated Solvents in Groundwater” (USEPA, 1998) and “An Approach for Evaluating the Progress of Natural Attenuation in Groundwater” (USEPA, 2011) provides a framework for presenting the lines of evidence that natural attenuation of chlorinated solvents is occurring. The three recognized lines of evidence include:

- Historical groundwater and/or soil chemistry data that clearly demonstrate a trend of decreasing contaminant mass and/or concentration over time at appropriate monitoring points (USEPA, 1998);

- Hydrogeologic and geochemical data that can be used to establish indirectly the type(s) of natural attenuation processes occurring at the site and the rate at which the processes will reduce contaminant concentrations to the cleanup goal (USEPA, 1998); and
- Data from field or microcosm studies which directly demonstrate the occurrence of a specific natural attenuation process at the site and its capacity to degrade the contaminants of concern (USEPA, 1998).

The MNA assessment evaluates predominant electron acceptors, the variability of these electron acceptors, major nutrients, general groundwater quality, key microbial population and enzyme activities and dissolved gasses. The assessment uses this data to determine the types of organisms that will be able to effectively flourish in the aquifer, how the geochemistry and chemistry of the aquifer impacts MNA processes, how the indigenous microbial population is being supported, the availability of microbial populations and the presence of reductive dechlorination occurring in the aquifer.

3.3.2.1 Chemical Lines of Evidence

The occurrence and progress of natural attention in reducing COC concentrations is provided by evaluating the presence and effectiveness of the transformation pathways for chlorinated ethenes. Chlorinated ethenes are degraded by both biological and abiotic (non-biological) mechanisms. The graphic below shows the biological (anaerobic) and abiotic transformation pathways for chlorinated ethenes. This graphic does not include other chemically induced aerobic (e.g. ISCO) and anaerobic (e.g. zero valent iron) pathways that can promote degradation of chlorinated compounds.

Abiotic and Biotic Pathways for Chlorinated Ethenes and Ethane

Source: Vogel et al., 1987.

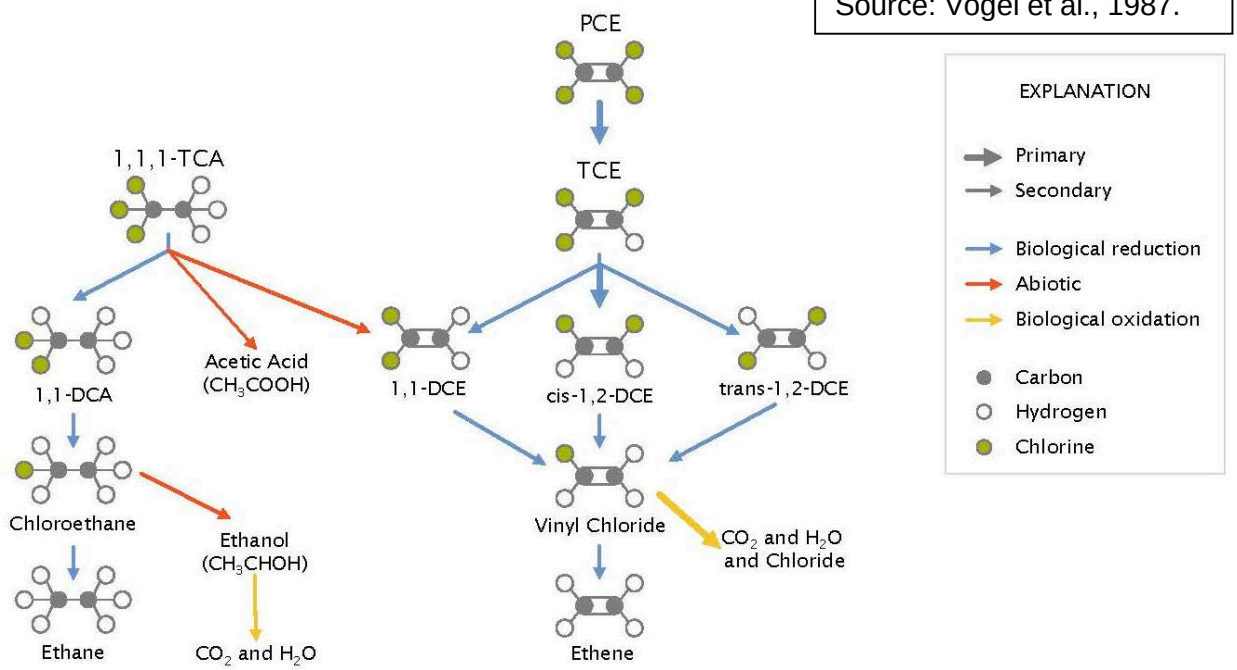

Table 9 presents a summary of analytical results for VOCs in groundwater. These data provide lines of evidence that natural attenuation of TCE is continuing to occur via biological mechanisms in both onsite and offsite groundwater. Groundwater sample results continue to show elevated levels of cis-1,2-DCE in Site monitoring wells, as well as the presence of VC in 34 of the wells monitored. In addition, 20 wells showed ethene concentrations equal to or greater than 1 µg/L, indicating that complete reductive dechlorination is occurring in various locations of the northern and southern plumes. Table 8 also includes the laboratory MNA analytical results and the microbial data.

When TCE concentrations are below 5 µg/L the remedial action level (Maximum Contaminant Level (MCL)) has been achieved and due to the low concentration further significant reduction in contaminants is not expected on an annual basis. Also in areas where VOC concentrations are at very low levels, it is unlikely to observe microbial populations, genes and other indicator parameters necessary to demonstrate biodegradation of VOCs.

3.3.2.2 Geochemical Lines of Evidence

The occurrence and progress of natural attenuation in reducing COC concentrations is provided by evaluating geochemical parameters along with the results of conventional chemical and microbial analyses. The detection of cis-1,2-DCE in groundwater samples from this Site is evidence that conditions likely are favorable for active reductive dechlorination processes. Key parameters used to assess the progress of reductive dechlorination include: temperature, concentration or presence of electron acceptors (dissolved oxygen, nitrate, iron, manganese and sulfate), presence and amount of nutrients (e.g. concentrations of nitrogen and phosphorus), bioavailable carbon source to sustain microbial population, concentrations of COCs and pH.

Tables 4, 8 and 9 present the groundwater field parameters and MNA analytical and microbial results for the fourth quarter event. A summary of the key items from these tables are discussed below:

- The groundwater during this quarter was generally considered to be under bulk anaerobic conditions, with 64 out of 97 wells showing DO concentrations less than 1 mg/L. In addition, 13 wells displayed microaerophilic conditions with DO less than 2.0 mg/L. DO levels were low in both the northern and southern plumes. Elevated DO levels were observed in some areas that had been exposed to ISCO injections, similar to previous sampling rounds.
- The ORP of the groundwater samples ranged from a low of -251.1 mV in MW-178 to a high of 758.9 mV in IW-76 (some purged groundwater exhibited a purple color presumably due to ISCO injections in this area). Similar to previous quarters, IW-72 also exhibited a high ORP measurement (690 mV) during this quarter. In general, the ORP levels were less than 500 mV in most of the Site wells, which indicate that the groundwater is under manganese reducing to sulfate reducing conditions.
- In general the northern and southern plumes are under anaerobic to microaerophilic conditions. However, when ISCO was applied there was a localized increase in the DO

and ORP levels. ISCO injections tend to increase ORP, conductivity and dissolved oxygen levels.

- The pH of the groundwater ranged from a low of 4.2 in MW-36R to a high of 13.2 in MW-65.
- The alkalinity of the groundwater is relatively low with many of the groundwater samples showing total or bicarbonate alkalinity concentrations less than 100 mg/L. However, this quarter twenty six wells showed total alkalinity equal to or greater than 100 mg/L including , MW-25, MW-35R, MW-38, ITMW-6, ITMW-11, ITMW-15, ITMW-19, MW-41R, MW-50R, MW-56R, MW-57R, MW-60R, MW-61R, MW-65, , MW-67R,MW-81, MW-83, MW-84, MW-86, MW-90, MW-91, MW-92, MW-98, MW-188, IW-77 and IW-80. The relatively low alkalinity concentrations in some parts of the plume indicate that the groundwater does not have significant natural buffering capacity in these areas.
- In general, pH levels are in the range of 5 to 6; however, the pH is affected by ISCO injections for approximately one year. Similar to pH results, the alkalinity also increased in the northern wells impacted by the ISCR injection. Source area wells have not shown a significant change in alkalinity.
- The temperature of the groundwater ranged from about 19.3° to 29.1°C, with the majority of the temperatures around 21-26°C, which is a range that is conducive to most microbes in groundwater.
- The major competing electron acceptors nitrate, manganese, iron and sulfate were evaluated in Site groundwater samples (Table 8). Nitrate levels were generally present at less than 1 mg/L in most of the monitoring wells. ITMW-6 showed an elevated level of nitrate at 25.5 mg/L. Manganese concentrations ranged from 0.0045 mg/L in ITMW-15 to 20.0 mg/L in MW-61R. The majority of the wells showed manganese concentrations less than 1 mg/L. Total iron was present in the majority of the groundwater samples at 10 mg/l or less, with the exception of MW-39R, MW-40R, MW-41R, MW-58R, MW-61R and MW-184. The very high total iron concentration observed in MW-61R (74.0 mg/L) was due to the in situ chemical reduction injections in the area of this well. These results are consistent with the low levels of ferrous iron measured in groundwater (<4 mg/L). MW-40R, MW-41R and MW-61R showed total iron concentrations greater than 10 mg/L and ferrous iron concentrations at about 3.30 mg/L in all three wells, indicating iron reducing conditions are present in the area around these wells. Although it should be noted that there are elevated levels of total iron and ferrous iron. Sulfate concentrations were generally less than 1,000 mg/L with the exception of IW-76, IW-77, MW-23, MW-25, MW-35R, MW-36R, MW-65, MW-82, MW-83, MW-84, MW-85, MW-86, ITMW-15, ITMW-18 and ITMW-19. MW-35R displayed one of the highest sulfate concentrations in groundwater at 5,510 mg/L and likewise also showed elevated levels of persulfate at 8,400 mg/L. The wells which displayed significantly higher concentrations of sulfate were likely impacted by the ISCO injections. In general, both the northern and southern plumes displayed low levels of total iron and manganese in the groundwater, which appears to represent background levels in the groundwater. These levels were even lower in wells impacted by ISCO in the northern plume. However, the iron and manganese concentrations remained fairly consistent throughout the eight quarterly

sampling events. During the past two years of monitoring, sulfate, nitrate and manganese concentrations have generally been stable. Of these compounds, sulfate concentrations were most significantly impacted by ISCO injections.

- The dissolved hydrogen concentrations ranged from 1.6 nanomolar (nM) in six wells to 44,000 nM in MW-36R. Several wells displayed dissolved hydrogen greater than 1,000 nM and the majority of these wells, including MW-36R also showed elevated persulfate concentrations, which likely impacted the dissolved hydrogen concentrations in groundwater. Most of the wells displayed dissolved hydrogen concentrations in a range of 1.7 to 10 nM, which indicates that the majority of the plume is under sulfate reducing to methanogenic conditions.
- Dissolved gasses methane, ethane and ethene were present in low levels at the Site. Ethene levels remained similar to third quarter 2015, with elevated ethene levels observed in MW-38 and MW-41R. The ethene levels in MW-38 corresponded to elevated levels of DHC and BAV1 vinyl chloride reductase in this well, which is similar to the previous quarters.
- TOC levels ranged from less than 1 mg/L to a high of 26 mg/L in MW-65 for those wells not impacted by ISCR. Since MW-61R was directly down-gradient of the ISCR injection, it is not surprising that the TOC level significantly increased to 1,620 mg/L due to the high amount of carbon substrate in the ISCR injection. Similar to the previous quarters more than 80 percent of the groundwater samples displayed TOC levels less than 2 mg/L. Methane, ethane and ethene were detected at low concentrations or were non-detect in groundwater samples throughout the Site (Table 8). These results are likely due to low levels of TOC present in the groundwater, which may be inhibiting bacterial growth.
- Major nutrients, ammonia and phosphate, were evaluated in groundwater and the results in Table 8 indicate that the groundwater contains non-detectable levels of ammonia (< 0.10 mg/L), with the exception of 20 wells which displayed ammonia levels greater than 0.10 mg/L. The highest ammonia level was observed in MW-61R with a concentration of 8.1 mg/L. This well was impacted by the ISCR injection and therefore, it is not surprising to see elevated ammonia levels in this well. Phosphate was detected at concentrations ranging from non-detect (< 0.03 mg/L) to a high of 95.4 mg/L in MW-65. Elevated levels of phosphate greater than 3 mg/l were also observed in MW-23, MW-61R, MW-65, MW-81, MW-83 and IW-77, which indicates that phosphate is present in non-limiting concentrations to the indigenous microbial community in some areas of the Site groundwater. The high phosphate concentrations observed in MW-65 (95.4 mg/L) and MW-23 (27.1 mg/L) are likely due to the modified activated sodium persulfate (MASP) injections, which contained 5 grams per liter (g/L) phosphate and was performed in the area of these two wells. Average nutrient levels, including ammonia, nitrate, nitrite and total phosphate have displayed relatively consistent results. In general nitrate levels are slightly higher in the southern plume, which may be inhibiting the DHC population. Ammonia and phosphate levels are more elevated in the northern plume than the southern plume which may indicate that key nutrients (nitrogen and phosphorus) may be limiting the microbial population including DHC in the southern plume.

- There are several compounds that have shown non-detect values over the past 8 quarters including volatile fatty acids (lactic acid, propionic acid, butyric acid, pyruvic acid and acetic acid), sulfide and 2-chloroethanol. Since MW-61R was exposed to an ISCR injection, which included high concentrations of fermentable organic carbon substrates, it is not unexpected that elevated levels of acetic acid, pyruvic acid, propionic acid and butyric acid were observed in this well. In addition, 2-butanone was detected in MW-61R at 269 µg/L. The butanone is likely due to the microbial conversion of fermentable organic carbon under low pH conditions, (pH was 5.5 in MW-61R).

3.3.2.3 Microbial Lines of Evidence

Table 8 provides the microbial results for the groundwater samples which were evaluated using standard groundwater analysis protocols. Table 8 includes the results for the genus DHC, the functional genes, tceA reductase (tceA), BAV1 VC reductase (BVC) and VC reductase (VCR). Historical quarterly microbial results are presented in Table 9. Similar to 2014 and the first three quarters of 2015 sampling results, the DHC microbial population was detected at elevated levels in MW-38 (7,700 cells/mL); a location that is relatively close to the source area. Likewise, the BVC gene was also detected at elevated levels (4,730 cells/mL) in MW-38, which indicates the potential for complete reductive dechlorination in this area. In addition to MW-38, IW-73 and MW-90 showed elevated levels of DHC (1,660 and 6,030 cells/mL, respectively). The following thirteen wells displayed DHC concentrations greater than 30 cells/mL: MW-22, MW-38, IW-73, IW-74, MW-46R, MW-60R, MW-61R, MW-63R, MW-67R, MW-82, MW-88, MW-90 and MW-98.

The DHC population generally peaked during the monitoring event in August 2014. The bulk of the microbial population is located within the source area and the peak occurred in between the second and third ISCO injection events in May and October 2014. To date the highest population of DHC has been identified at MW-38. Pre-ISCO application, the population was approximately 50,000 cells/mL. The population peaked at almost 250,000 cells/mL in July 2014 and has since declined to approximately 7,700 cells/mL. In general the DHC population has declined since the last ISCO injection which is to be expected given the oxidative conditions which inhibit the growth and sustainability of DHC. However various field studies have shown that DHC populations can rebound to native levels within a relatively short time period (Sutton et al., 2011).

The chemical, geochemical and microbial data from the fourth quarter event are similar to the previous quarterly monitoring events in 2014 and 2015. The VOC results demonstrate that reductive dechlorination is occurring in various locations of the plume.

The higher levels of TOC and ethene have been consistently observed in MW-38, which indicate that there is bioavailable organic carbon in this area that is supporting the indigenous microbial population of DHC and contributing to complete reductive dechlorination of VOCs in groundwater. The lower levels of reductive dechlorination observed in this plume are likely due to the low levels of TOC observed in various locations throughout the plume and the elevated DO levels.

3.4 Data Quality Assessment

All field and analytical data were reviewed by Ramboll Environ. Validation findings are summarized below. Detailed validation reports are included in Appendix C.

3.4.1 Field Data

Field data were collected and validated according to the RADD, Work Plan and associated SOPs and USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Review (June 2008). The field data and documentation were evaluated against the following criteria, as appropriate:

Samples were collected at the specified locations identified in the RADD plus five wells sampled on the northeast corner of the Whirlpool property (MW-87 through MW-91), six wells sampled on the Boys and Girls Club property (MW-96 through MW-99, MW-183 and MW-184), nine wells sampled for in-situ chemical oxidation (ISCO) monitoring (MW-23, MW-24, MW-81, MW-82, MW-92 through MW-95 and MW-172), two temporary wells sampled for in-situ chemical reduction (TMW-10 and TMW-11) and twenty-one additional wells sampled to support the evaluation of the source area, plume boundary and shallow groundwater.

- Field instrumentation calibration and quality assurance/quality control (QA/QC) checks on equipment were conducted on a daily basis, prior to field work; and
- Sample documentation protocol and chain-of-custody protocols were followed per Ramboll Environ Field Procedures.

3.4.2 Laboratory Analytical Data

All VOC (SW846 5030B/8260B) analytical results for the 76 RADD plume boundary, onsite and offsite wells, in addition to wells noted in Section 3.4.1, received data validation by a Ramboll Environ Project Chemist. During the data validation process, data validation qualifiers were assigned to the results per USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Review (June 2008), as necessary, to indicate potential limitation on use of the data. In addition, data qualifier codes were added to the results to indicate the reason(s) for qualification and the associated bias direction, if discernible.

The following sections provide a summary of the data validation results.

General Usability Assessment

The laboratory data packages for VOC analysis received from PACE Analytical Services were paginated, complete and overall of good quality. The data packages submitted contained modified level II data packages for data validation.

The data quality for VOCs was generally acceptable. A number of analytes were qualified as non-detect due to method, equipment and trip blank contamination. This contamination generally originates from carry over on the instrument, from common laboratory contaminants used in the laboratory and from cross contamination during shipping and storage of samples.

The overall quality of analytical data is inferred from the quantitative and qualitative data quality indicators of reporting limits, accuracy, precision, completeness, representativeness and comparability. A general overall assessment of each of the data quality assurance objectives is provided below:

- **Reporting Limits.** The minimum reporting limits required were attained on undiluted samples with the exception of 1,3-dichloropropene and 1,1,2,2-tetrachloroethene. The laboratory instrument used for USEPA Method 8260B cannot be calibrated to detect 1,3-dichloropropene at a RAL of 0.41 µg/L or 1,1,2,2-tetrachloroethene at a RAL of 0.066 µg/L as prescribed by the RADD. The method detection limit (MDL) for 1,3-dichloropropene at 0.14 µg/L was below the RAL whereas the MDL for 1,1,2,2-tetrachloroethene was 0.15 µg/L which is above the RAL listed in the RADD. ADEQ was informed of the limitations of the laboratory instrument in March 2014.

  Elevated target analyte concentrations necessitated dilutions for several samples. In such instances, the reviewer selected the result for each target analyte, corresponding to the analysis run with the least dilution. All other analytes were reported from the undiluted analysis if applicable. Results below the reporting limit (RL) were flagged by the laboratory if above the MDL. To reflect the uncertainty associated with values reported between the MDL and RL, these results were qualified as estimated ("J").

- **Precision.** The MS/MSD relative percent difference (RPD) results for VOCs and the field duplicate RPD VOC results satisfied applicable precision criteria. All field duplicate results had calculated RPDs less than 30% for all aqueous samples, indicating adequate and reproducible field and laboratory collection and analytical techniques. Laboratory dilution calculations were reviewed and were determined to be accurate. The more conservative (higher) concentrations were reported in tabular form and are used for the purpose of site evaluation.

- **Accuracy.** Accuracy is a measure of bias in a measurement system. The closer the value of the measurement agrees with the true value, the more accurate the measurement. This was expressed as the percent recovery of LCSs, MS/MSDs and surrogates. Surrogate spike recoveries, MS/MSD results and LCS results for constituents of concern satisfied the applicable evaluation criteria for accuracy, which indicates that overall accuracy with respect to the analytical system and to the site specific matrix can be considered acceptable. While several recoveries were outside of acceptable criteria, these recoveries were not severe enough to impact the usability of the data and qualification of data was required for seventeen sample results.

- **Completeness.** Completeness is a measure of the number of valid measurements obtained in relation to the total number of measurements planned. Completeness is expressed as the percentage of valid or usable measurements to planned measurements. No data were rejected during the validation process. As such, the completeness for the 2015 fourth quarter event is 100%.

- **Representativeness.** Representativeness is a qualitative parameter which expresses the degree to which sample data accurately and precisely represents a characteristic of a population, parameter variations at a sampling point, or an environmental condition.

The agreement between the field duplicate results was used to assess representativeness. The general agreement between the field duplicate results is considered to indicate that the samples collected are adequately representative of the medium sampled.

- **Comparability.** In essence, comparability was maintained by consistency in sampling conditions, selection of sampling procedures, sample preservation methods, analytical methods and data reporting units.

4 Plume Stability

This section includes discussion of trends for individual wells, trends for groups of wells, plume boundaries and concentration versus time plots. The discussion and assessment of the plume is based upon a macro-analysis of the entire plume versus a single well analysis to categorize the plume stability. Individual wells will exhibit variability and fluctuations that will influence plume boundaries in any given quarter. The macro-analysis of the entire data set minimizes the over weighting of any particular well or data set from a well. Monitoring wells installed after the 2013 RADD was issued by ADEQ are only included in this analysis if they have been sampled a sufficient number of times to establish temporal trends (statistical trend analysis typically requires data from at least four sampling events).

Table 10 presents a historical summary of TCE and degradation products, cis-1,2-DCE and VC, concentrations in groundwater samples. These values are used for the analysis of trends described in the remainder of this section.

4.1 Lines of Evidence

Several analytical tools or "lines of evidence" were used to evaluate plume stability conditions including:

- **Statistical Methods**. Mann-Kendall nonparametric test (Gilbert, 1987; USEPA, 2000) to calculate the temporal trend in individual well analyte concentrations over time.
- **Isoconcentration Maps.** Qualitative method to evaluate temporal trends by comparing representations of plume concentration and extent for certain periods over the duration of monitoring.
- **Time vs. Concentration Plots.** Qualitative method to evaluate temporal trends in constituent concentration for individual wells and for representative concentration of overall plume (mean). The plots also include exponential regression lines to aid the analysis of temporal trends.

4.1.1 Statistical Analysis of Temporal Trends

The Mann-Kendall test (Gilbert, 1987) is a non-parametric test for linear trend, based on the idea that a lack of trend would be represented by a time series plot fluctuating randomly about a constant mean level, with no visually apparent upward or downward pattern. Because Mann-Kendall is a non-parametric test, it is not dependent upon the magnitude of data, the distribution of the data (does not have to have a normal distribution), missing data from a particular sampling event, or irregularly spaced monitoring events. Mann-Kendall assesses whether a time-ordered data set exhibits an increasing or decreasing trend, at a predetermined level of significance.

The Mann-Kendall statistic is computed by looking at all possible pairs of measurements in the data set and scoring each pair as follows:

- An earlier value lower in magnitude than a later one is assigned a value of 1;
- An earlier value higher in magnitude than a later sample is assigned a value of –1; and
- Two identical values are assigned 0.

The scores from all of the pairs are added together to get the Mann-Kendall statistic (S), a positive value of S indicates that a majority of the differences between earlier and later measurements are positive, which suggests an increasing trend over time. Conversely, a negative value for S implies that a majority of the differences between earlier and later values are negative, indicating a decreasing trend. A value near zero indicates a roughly equal number of positive and negative results. This indicates the values have randomly fluctuated around a constant mean with no apparent trend. If the Mann-Kendall test indicates that there is not a statistically significant trend a second test, coefficient of variation (COV), is performed to determine if the trend is stable (COV is less than 1, little variation above and below the mean value) or if no trend exists (COV is greater than 1, high variation above and below the mean value).

The applicable outcomes of the temporal trend analysis are as follows:

- **Increasing**. Statistically significant increasing trend for concentrations (>90% confidence);
- **Stable.** No statistically significant trend for concentrations along with low variability for results (coefficient of variance <1);
- **No Trend**. No statistically significant trend for concentrations along with high variability for results (coefficient of variance >1);
- **Decreasing**. Statistically significant decreasing trend for concentrations (>90% confidence);
- **<PQL (Practical Quantitation Limit).** All sample results have a “J” qualifier (estimated result greater than the method detection limit but less than the reporting limit) or a mixture of non-detects and results with “J” qualifiers; and
- **Not Detected (ND).** Constituent has not been detected at the well during the time period analyzed.

The trend analysis performed for groundwater concentrations from 2009 (when installation of the last of the current wells used for monitoring in accordance with the RADD was complete) through fourth quarter 2015 are summarized in Tables 11 and 12. MW-42B and MW-43 were damaged in 2009 and permanently abandoned in 2014; therefore no statistical evaluation was performed for these wells. The following is the list of wells in each category (this list is only presented for evaluation of plume stability):

- **Northern Plume Wells (42 wells)**. MW-23, MW-27, MW-28, MW-31/31R, MW-32/32R, MW-33/33R, MW-34/34R, MW-35R, MW-36/36R, MW-39/39R, MW-40/40R, MW-41/41R, MW-46R, MW-50, MW-55/55R, MW-56/56R, MW-57/57R, MW-58/58R, MW-60,

MW-61, MW-62/62R, MW-63/63R, MW-65, MW-66, MW-67/67R, MW-68, RW-69, MW-70, MW-71, IW-72, IW-73, IW-74, IW-75, IW-76, IW-77, IW-78, IW-79, IW-80, MW-81, MW-82, MW-83 and MW-84.

- **Northeast Corner Wells (9 wells)**. MW-87, MW-88, MW-89, MW-90, MW-91, MW-96, MW-97, MW-98 and MW-99.
- **Southern Plume Wells (35 wells)**. ITMW-1, ITMW-2, ITMW-3, ITMW-4, ITMW-5, ITMW-6, ITMW-7, ITMW-9, ITMW-10, ITMW-11, ITMW-12, ITMW-13, ITMW-14, ITMW-15, ITMW-16, ITMW-17, ITMW-18, ITMW-19, ITMW-20, ITMW-21, MW-22, MW-24, MW-25, MW-26, MW-29, MW-30, MW-37, MW 38, MW-85, MW-86, MW-92, MW-93, MW-94, MW-95 and MW-172.
- **Source Area Wells (16 wells)**. ITMW-11, ITMW-12, ITMW-15, ITMW-17, ITMW-18, ITMW-19, MW-25, MW-37, MW-38, MW-85, MW-86, MW-92, MW-93, MW-94, MW-95 and MW-172.

Contaminant concentration trends as established during the fourth quarter event are summarized below:

- **Northern Plume Wells (42 wells):** The Mann-Kendall trend analysis utilizes data from all wells associated with the October 2015 groundwater monitoring event for the northern plume (Table 11) (temporal trend analysis relies upon previous data from four of the 42 wells in the northern plume). As described in more detail below, our determination that a majority of the wells exhibit little or no TCE or a decreasing or stable TCE concentration trend is based on the fact that 86% (36 of 42 wells) of these wells exhibit either little or no TCE or a decreasing or stable TCE concentration trend.

  The trend analysis for the 42 wells associated with monitoring the northern plume indicates the following:

  - Nine wells exhibit a stable trend for TCE concentrations.
  - Sixteen wells exhibit a decreasing trend for TCE concentrations.
  - Six wells exhibit no trend regarding TCE concentrations according to the statistical test. TCE concentrations in all six of these wells consisting of MW-27, MW-31/31R, MW-36/36R, MW-39/39R, MW-68 and IW-75 have been non-detect or less than 1 µg/L since October 2012.
  - Five wells exhibit TCE concentrations below detection limits or below reporting limits; and
  - Six wells exhibit an increasing trend for TCE concentrations.

  TCE concentrations in eleven of the 42 northern plume wells (26%) have been non-detect or less than 1 µg/L since October 2012 and 25 of the 42 wells (60%) have exhibited decreasing or stable trends; therefore, 36 of the 42 northern plume wells (86%) exhibit either little or no TCE or a decreasing or stable TCE concentration trend. We believe that this supports our plume stability conclusions.

In addition, Table 13 indicates that the average TCE concentration for wells in the northern plume decreased from 384 µg/L in April 2009 to 121 µg/L in October 2015.

As noted, TCE concentration trends are increasing in six of 42 (14%) of the wells (MW-55R, MW-56R, MW-57R, MW-61R, MW-66 and MW-67R). Further, of the six wells located in the northern plume with increasing TCE concentration trends:

- Four wells (MW-56R, MW-61R, MW-66 and MW-67R) had concentrations during the 2015 fourth quarter that were within historical ranges of detected values;
- MW-55 had not been sampled since October 2013 because access had not been granted by the property owner. The property owner provided access prior to the third quarter 2015 monitoring event; therefore, MW-55 was replaced (as MW-55R) and sampled during the third quarter 2015. Fourth quarter results reported a TCE concentration of 4.4 µg/L which is lower than the 8.2 µg/L when sampled in the third quarter 2015.

- **Northeast Corner Wells (nine wells):** The five wells located on Whirlpool property in the area of the northeast corner plume have been sampled six times between June 2014 and October 2015 and four wells located on Boys & Girls Club property further to the northeast have been sampled five times between October 2014 and October 2015. This allows for statistical analysis of temporal trends over this approximate one year period but does not allow for the interpretation of long-term temporal trends in these wells. The overall TCE concentration trends are increasing in MW-87 and MW-91 with concentrations ranging from 564 µg/L to 758 µg/L and 234 µg/L to 442 µg/L, respectively. The TCE concentration at MW-87 in the fourth quarter was the slightly lower than that in July 2015 and the TCE concentration in MW-91 increased from 405 µg/L in July 2015 to 442 µg/L in October 2015. TCE concentrations in MW-96 through MW-99 on the Boys & Girls Club property continue to be below detection limits (i.e. less than 0.17 µg/L).
- **Southern Plume Wells (35 wells):** As described in more detail below, our determination that a majority of the wells exhibit little or no TCE or a decreasing or stable TCE concentration trend is based on the fact that that 31 of 35 (89%) of the southern wells exhibit either little or no TCE or a decreasing or stable TCE concentration trend. The trend analysis for the 35 wells associated with monitoring the southern plume indicates the following:
  - Six wells exhibit a stable trend for TCE concentrations.
  - Eighteen wells exhibit a decreasing trend for TCE concentrations.
  - Five wells exhibit no trend regarding TCE concentrations (TCE concentrations at three of these wells, consisting of ITMW-16, ITMW-20 and MW-26, have been non-detect or less than 1 µg/L since October 2011). TCE concentrations at MW-85 and MW-86 (the other two wells with no trend) exhibit no trend according to the statistical test; however, TCE concentrations increased comparing the third and fourth quarters. While the TCE concentration at MW-85 jumped from 132 µg/L in July 2015 to 12,000 µg/L in October 2015, the TCE concentration at MW-86 increased from 65,100 µg/L to 131,000 µg/L during the same period.

- Three wells exhibit TCE concentrations below PQLs.
- Three wells (ITMW-6 and ITMW-10 located south of the former manufacturing building and MW-38 located immediately north of Area 1) exhibit an increasing trend for TCE concentrations. MW-38 is a source area well and is discussed further below. ITMW-6 had a TCE concentration of 3.1 µg/L during the fourth quarter 2015. Although TCE concentrations at ITMW-6 may have exhibited an increasing trend, review of the data set indicates that TCE concentrations have ranged from < 1.6 µg/L to 4.4 µg/L during 33 monitoring events since 1989 and the current detected concentration of 3.1 µg/L is insignificant regarding the overall range of concentrations. Although cis-1,2-DCE concentrations at ITMW-6 may have exhibited an increasing trend, review of the data set indicates that cis-1,2-DCE concentrations have ranged from 2.1 µg/L to 6.7 µg/L during 30 monitoring events since 1997 (cis-1,2-DCE was not analyzed during early monitoring events at ITMW-6) and the current detected concentration of 5.5 µg/L is insignificant regarding the overall range of concentrations. ITMW-10 will continue to be monitored regarding the increasing trend of TCE concentrations near the south central boundary of the building; concentrations for cis-1,2-DCE and vinyl chloride at ITMW-10 showed decreasing trends. TCE concentrations in October 2015 are approximately 10% lower than the concentrations measured in July 2015.

- **Source Area Wells (16 wells):** The source area wells showed predominantly decreasing or stable concentration trends for TCE (ten wells decreasing, three wells stable and two wells with no trend) and for cis-1, 2-DCE (seven wells decreasing, seven wells stable and one well with no trend). Only one of the source area wells, MW-38, continued to demonstrate an increasing concentration trend for TCE and cis-1,2-DCE, however TCE concentrations have been continuing to decrease at MW-38 since October 2014 and the current TCE concentration is 50% less than the October 2014 concentration.

4.1.2 Isoconcentration Maps

Figures 2A and 2B show isoconcentration lines at the northern, northeastern and southern plumes for the 2015 Fourth Quarter groundwater monitoring event. Figure 2A of this report shows TCE concentrations exceeding 5 µg/L on and near the northeast corner of the facility. The presence of TCE in this area does not necessarily represent an expansion of the plume beyond the bounds of its historical maximum extent.

The 2014 second quarter groundwater monitoring event was the first time that the TCE concentration at MW-61 well exceeded 5 µg/L, requiring that the isoconcentration line be extended to include MW-61. This trend continued during the 2015 fourth quarter event, with a TCE concentration of 13.3 µg/L reported at MW-61R. Therefore, MW-61R continues to be included within the 5 µg/L plume boundary. A new monitoring well (MW-193) was installed northeast (down-gradient) of MW-61R in September 2015 and TCE was not detected during the fourth quarter 2015 sampling event. An ISCR pilot test commenced at MW-61R in October 2015 and the current TCE concentration in MW-61R is 5 µg/L; therefore, the isoconcentration no

longer extends past this well (see Attachment D of the Fourth Quarter 2015 Progress Report for further discussion).

4.1.3 Concentration vs. Time Plots

The average (arithmetic mean) of the detected TCE, cis-1,2-DCE and VC concentrations were calculated for each of the 17 comprehensive groundwater monitoring events conducted at the Site beginning in 2009 and are summarized in Table 13. Figures 5 through 9 show the average concentrations versus time for the combined northern and southern plume wells, the northern plume wells, the southern plume wells, the source area wells and the northeast corner plume wells, respectively. Decreases in average concentrations for TCE, cis-1,2-DCE and VC are noted for the combined northern and southern plume wells, southern plume wells and source area wells. The average concentrations of TCE, cis-1,2-DCE and VC in the northern plume wells continue to decrease, but at a moderate rate compared to the remainder of the wells. The average TCE concentration in the northeast corner wells has continued to increase gradually over the approximate one year time period since they were installed; however the cis- 1,2 – DCE concentration shows preliminary signs of a decreasing trend as is evident from Figure 9. The rate of decrease in average TCE concentrations has declined and average concentrations for the combined northern and southern plume wells, the southern plume wells and the source area wells increased in October 2015 due increases in source areas well concentrations (e.g., MW-25 and MW-86).

TCE and cis-1,2-DCE concentration versus time charts are also provided for pairs of wells located in the southern plume, source area and two located in the northern plume (Figure 10-12). As shown on Figure 10, although TCE concentrations continue to increase in ITMW-10 (primarily during the previous seven most recent sampling events) concentrations of cis-1,2-DCE in ITMW-10 and in nearby ITMW-9 have been decreasing. The concentration of TCE at ITMW-9 shows a stable trend. Figure 11 shows concentration trends for ITMW-19 and MW-25 located in the source area; concentrations are generally decreasing with decreases of one to two orders of magnitude following the third ISCO injection event in the source area. Although the overall trend is still decreasing for MW-25, the TCE concentration in October 2015 was almost 1.75 times the TCE concentration in July 2015. Figure 12 shows TCE concentrations at MW-61/61R increasing above historical maximums.

4.2 Summary of Plume Stability

The overall groundwater conditions at the Site exhibit stable characteristics based upon statistical analysis of temporal concentration trends, decreasing average TCE concentrations in the southern plume, stable to decreasing average TCE concentrations in the northern plume and an aerial extent for the north plume predominantly within the bounds of the historical maximum plume extent except near MW-61R. Increases in TCE concentrations observed in MW-66 and MW-67/67R are within historical ranges and continue to be reported at levels below the RAL. The boundaries of the south plume have been modified based upon the findings from the Property Boundary Investigation September 2014, data obtained from MW-182 (installed in late June 2015) and the data from the south sentinel wells installed in late September 2015).

The site-wide groundwater conditions can be categorized as three separate plumes with distinct characteristics (i.e. the southern plume, the northern plume and northeastern plume).

The southern plume is characterized by:

- A relatively flat south, southeast potentiometric gradient with a southwestern gradient in the southern section of the plume;
- Source area (Area 1) TCE concentrations greater than 10,000 µg/L;
- An aerial extent of approximately 1,070,000 square feet (ft^2) (predominately located under the footprint of the Whirlpool building); and
- A decreasing trend in average TCE concentrations.

The northern plume is characterized by:

- A north-northeast potentiometric gradient that is flat in the south portion of the north plume but steepens to north-northwest;
- TCE concentrations generally between 100 and 1,000 µg/L;
- An aerial extent of approximately 455,000 ft^2 located north of the Whirlpool building and extending to the residential area to the north and northeast; and
- A decreasing trend in average TCE concentrations.

The northeast plume is characterized by:

- An east, northeast potentiometric gradient.
- TCE concentrations generally between 5 and 800 µg/L.
- An aerial extent of approximately 237,000 ft^2 located northeast of the Whirlpool building and extending to property owned by the Boys and Girls Club, but offsite groundwater TCE concentrations are only slightly elevated above MCLs.
- Concentrations at MW-87 and MW-91 have begun to stabilize, after previously increasing since first installation and sampling in June 2014. There is not enough data to establish long-term temporal trends.

5 Summary and Conclusions

Ramboll Environ performed the 2015 Fourth Quarter Groundwater Monitoring Event on behalf of Whirlpool during the week of October 5, 2015. The quarterly monitoring was conducted for collection of groundwater samples for analysis of VOCs and MNA parameters defined by the RADD as well as additional parameters not included in the RADD.

- The groundwater potentiometric surface observed during the fourth quarter event is consistent with that historically observed at the Site except for the addition of a southwestern gradient in the southern plume identified due to the installation of sentinel wells.
- The direction of the lateral hydraulic gradient continues to be influenced by a divide located just south of Ingersoll Avenue with directions of the hydraulic gradient predominantly to the northeast and south on either side of the general divide.
    - Groundwater north of the divide is flowing in a northeasterly direction; and
    - Groundwater south of the divide is flowing in a southern/southeasterly direction with a southwesterly trend south of the manufacturing building.
- Fourth quarter event groundwater monitoring data shows generally stable to decreasing trends for TCE concentrations.
    - Plume boundary well data continue to show results generally consistent with historical TCE concentrations although trends in the northern portion of the plume near MW-61R are anticipated to decrease due to ISCR injections;
    - Offsite well data are similar to previous monitoring events and continue to show generally stable to decreasing TCE concentration trends; and
    - Onsite well data continue to show generally stable to decreasing TCE concentration trends; although, the data has been influenced by the ISCO injections.
- The chemical, geochemical and microbial data from the fourth quarter event are similar to the quarterly monitoring events in 2014 and 2015. The VOC results demonstrate that reductive dechlorination is occurring in various locations of the plume.
- The ISCO events performed in 2014 and 2015 continue to be effective with TCE concentration reductions as follows:
    - Approximately 62% decrease since May 2014 at source area wells MW-25, MW-85 and MW-86;
    - Supplemental neck area decrease of approximately 83% since May 2014; and
    - Approximately 83% decrease since May 2014 at wells in Areas 2 and 3.
- The ISCR event performed in September/October 2015 is proving to be effective with TCE concentrations reducing as follows:
    - The TCE concentration in MW-61R has been reduced to 5 µg/L. The sum of the TCE concentrations for MW-61R, TMW-10 and TMW-11, 60 days after ISCR

injection, showed a decreasing concentration trend from approximately 238 µg/L to 120 µg/L (~50% decrease).

Notes:
ft = Feet
NA = Not available (not installed or abandoned/replaced)
nm = Not measured
Horizontal and vertical coordinates converted to Arkansas State Plane, North Zone (NAD83) and North American Vertical Datum of 1988 (NAVD88) based on information provided in historic site file. Casing elevations for ITMW-1 through ITMW-21 and MW-22 extracted from 2011/2012 Annual Ground Water Monitoring Report dated June 28, 2012.
Casing elevations for remaining wells extracted from survey data provided by Philip J. Leraris, PE, LS, dated May 12, 2009.
IW-129, IW-130, IW-131, and MW-81 to MW-99 surveyed during 2014
Well screen intervals and depths adapted from monitoring well construction diagrams.
1 = Construction diagram notes use of pre-packed stainless steel screen
2 = Construction diagram text and graphical representation differ on construction details. Graphical representation used to infer elevations
3 = Construction diagram notes presence of sedimentation sump below screened interval

Notes:

ft btoc	feet below top of casing	mL/min	milliliters per minute
in	inches	mg/L	milligrams per liter
ORP	oxidation reduction potential	NTUs	nephelometric turbidity units
DO	dissolved oxygen	nm	not measured
(°C)	degrees Celcius	(µS/cm)	microsiemens per centimeter
mV	millivolts	--	color not noted
^	Well not sampled		

Tubing inlet depths based on estimated distance from total depth.
All wells gauged using electronic water level meter and purged using peristaltic pumps.

Notes:

The slug used for the tests has a diameter of 1.5 inches and a length of 35.4 inches. It should displace approximately 0.27 gallons or 1.6 feet of water in a 2 inch diameter well.
Coarse grained unit is gravel with sand, silt and loose framents and fine grained unit is clayey silt.

1 = Screen within fine grained unit is assumed cased.
2 = Average hydraulic conductivity of anisotropic aquifer (Fetter 1994)
[1] = [1] For the calculations it is assumed that coarse grained unit is an order of magnitude higher conductivity as compared to the fine grained unit.
NR = Not required (well screened in coarse grained unit only)
ft = Feet
ft/d = Feet per day
cm/sec = Centimeters per second
NV = No curve matching possible

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method

RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Onsite Wells
Offsite Wells
Plume Boundary Wells

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
nm = Not measured

Notes:
ND = Result is not detected at the associated method quantitation limit
NT = Analyte not tested
U = Not Detected (MDL included where available, RDL included for older analyses)
M1 = Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Fourth Quarter 2015 Calibration Logs

Whirlpool Fort Smith Field Equipment Calibration Checklist

Date: 10/5/15

Calibrated by: Victoria Sieglen

Turn on YSI. Note time in DO section, line 1!

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** SAC0116 **Exp:** 3/16

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8039 **Exp:** 9/19

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAC488 **Exp:** 3/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAC304 **Exp:** 3/17
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.

9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAA 1604 **Exp:** 1/17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 10:21 + 10min = 11:21
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.13 in. x 25.4 = 765.302 mmHg - 15.169 = 750.133 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Field Notebook calibration entry:
YSI – Serial Number:

1. Specific Conductance: 1303
2. ORP: 241.3
3. pH:
   - Point 1: 7.0
   - Point 2: 3.93
   - Point 3: a.ad
4. DO: 9.05

Whirlpool Fort Smith Field Equipment Calibration Checklist

Date: 10/5/2015

Calibrated by: Courtney Bednaz

Turn on YSI. Note time in DO section, line 1!

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 5ACC61C **Exp:** March 2016

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 6039 **Exp:** 9/2019

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC488 **Exp:** Mar/2017
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC304 **Exp:** Mar/17
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AA1EA **Exp:** Jan/17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1030 + 10min = 10:40
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.13 in. x 25.4 = 765.302 mmHg - 15.169 = 750.133 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Field Notebook calibration entry:

YSI – Serial Number: 17278

1. Specific Conductance: 1.379
2. ORP: 247.4
3. pH:
   - Point 1: 7.01
   - Point 2: 4.00
   - Point 3: 10.02
4. DO: 98.8

Whirlpool Fort Smith Field Equipment Calibration Checklist

Date: 10/05/2015

Calibrated by: J. Myers

Turn on YSI. Note time in DO section, line 1!

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** SAC151 **Exp:** 03/31/2016

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8034 **Exp:** 04/30/2019

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAD425 **Exp:** 4/30/2017
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAD247 **Exp:** 4/30/2017
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAD453 **Exp:** 4/30/2017
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1010 + 10min = 1020
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.13 in. x 25.4 = 765.302 mmHg - 15.169 = 750.133 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Field Notebook calibration entry:

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC488 **Exp:** 3/3/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5GH1066 **Exp:** 8/31/16
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.

9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AA164 **Exp:** Jan / 17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 11:56 am + 10min = ~~1256~~ 1206
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.13 in. x 25.4 = 765.302 mmHg - 15.169 = 750.133 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 4AD1640 **Exp:** 4/16
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 4A5289 **Exp:** 6/16
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** AA5846 **Exp:** 10/16
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 0655 + 10min = 0705
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.09 in. x 25.4 = 764.286 mmHg - 15.169 = 749.117 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Field Notebook calibration entry:

3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water. 4/30/16
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 4AD0698 **Exp:** 4/30/16 CB
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 4AG557 **Exp:** 7/30/16
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 6:47 + 10min = 6:57
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.09 in. x 25.4 = 764.286 mmHg - 15.169 = 749.117 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Field Notebook calibration entry:
YSI – Serial Number:

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** SAC616 **Exp:** 3116

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8154 **Exp:** 10119

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAC488 **Exp:** 3117
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAC304 **Exp:** 3117
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** SAA164 **Exp:** 1117
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 0650 + 10min = 0700
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.08 in. x 25.4 = 764.032 mmHg - 15.169 = 748.863 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

RE: Project: FORT SMITH, AR
Pace Project No.: 60204289

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 06, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204289

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 16, 2015

General Information:
1 sample was analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204289

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 16, 2015

General Information:
1 sample was analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204289

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
1 sample was analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72134

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403828 [MSV/7213 (Lab ID: 1646422)
  - Chloromethane
  - Trichloroethene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72134

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204425003

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 1646424)
  - Acetone
  - Chloroethane
- MSD (Lab ID: 1646425)
  - Acetone

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60204289

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: WET/57797

[1]	Ferrous iron performed in the field

Batch: WET/57798

[1]	Field pH

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: FORT SMITH, AR
Pace Project No.: 60204296

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 06, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204296

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 16, 2015

General Information:
9 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204296

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 16, 2015

General Information:
9 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204296

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
13 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72111

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403625 [MSV/7211 (Lab ID: 1645608)
  - Chloromethane

QC Batch: MSV/72112

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403626 [MSV/7211 (Lab ID: 1645610)
  - Chloromethane

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72111

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1645609)
  - Acetone

QC Batch: MSV/72112

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1645611)
  - Acetone

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204296

Method: **SM 2320B**
Description: 2320B Alkalinity
Client: Environ_AR
Date: October 16, 2015

General Information:
9 samples were analyzed for SM 2320B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60204296

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72111

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/72112

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: WET/57797

[1] Ferrous iron performed in the field

Batch: WET/57798

[1] Field pH

Batch: WET/57809

[1] Ferrous iron performed in the field

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60204296

ANALYTE QUALIFIERS

L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Sample Condition Upon Receipt

WO# : 60204296

60204296

Client Name: Environ

Optional
Proj Due Date:
Proj Name:

Courier: FedEx ☐ UPS ☐ VIA ☑ Clay ☐ PEX ☐ ECI ☐ Pace ☐ Other ☐ Client ☐

Tracking #: _____ Pace Shipping Label Used? Yes ☑ No ☐

Custody Seal on Cooler/Box Present: Yes ☑ No ☐ Seals intact: Yes ☑ No ☐

Packing Material: Bubble Wrap ☐ Bubble Bags ☑ Foam ☑ None ☐ Other ☐

Thermometer Used: CF +0.6 T-239 / CF +0.6 T-262 **Type of Ice:** Wet Blue None ☐ Samples received on ice, cooling process has begun. (circle one)

Cooler Temperature: 2.0 2.8 1.8

Date and initials of person examining contents: BB 10/6/15 0959

Temperature should be above freezing to 6°C

Chain of Custody present:	☑Yes ☐No ☐N/A	1.
Chain of Custody filled out:	☑Yes ☐No ☐N/A	2.
Chain of Custody relinquished:	☑Yes ☐No ☐N/A	3.
Sampler name & signature on COC:	☑Yes ☐No ☐N/A	4.
Samples arrived within holding time:	☑Yes ☐No ☐N/A	5.
Short Hold Time analyses (<72hr):	☑Yes ☐No ☐N/A	6. Nov 5
Rush Turn Around Time requested:	☐Yes ☑No ☐N/A	7.
Sufficient volume:	☑Yes ☐No ☐N/A	8.
Correct containers used:	☑Yes ☐No ☐N/A	
Pace containers used:	☑Yes ☐No ☐N/A	9.
Containers intact:	☑Yes ☐No ☐N/A	10.
Unpreserved 5035A soils frozen w/in 48hrs?	☐Yes ☐No ☑N/A	11.
Filtered volume received for dissolved tests?	☐Yes ☐No ☑N/A	12.
Sample labels match COC: Includes date/time/ID/analyses Y Matrix: WT	☑Yes ☐No ☐N/A	13.
All containers needing preservation have been checked.	☑Yes ☐No ☐N/A	
All containers needing preservation are found to be in compliance with EPA recommendation.	☑Yes ☐No ☐N/A	14.
Exceptions: VOA, Coliform, O&G, WI-DRO (water)	☑Yes ☐No	Initial when completed / Lot # of added preservative
Trip Blank present: Pace Trip Blank lot # (if purchased): Covered	☑Yes ☐No ☐N/A	15. cap color corresponds TB w/ samples from same cooler
Headspace in VOA vials (>6mm):	☐Yes ☑No ☐N/A	16.
Project sampled in USDA Regulated Area:	☐Yes ☐No ☑N/A	17. List State:
Additional labels attached to 5035A vials in the field?	☐Yes ☐No ☑N/A	18.

RE: Project: Fort Smith, AR
Pace Project No.: 60204425

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 07, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204425

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 16, 2015

General Information:
21 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204425

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 16, 2015

General Information:
21 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204425

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
29 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

pH: Post-analysis pH measurement indicates insufficient VOA sample preservation.
- MW-57R-201510 (Lab ID: 60204425001)

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

QC Batch: MSV/72158

S2: Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- IW-72-201510 (Lab ID: 60204425024)
  - Toluene-d8 (S)
- IW-76-201510 (Lab ID: 60204425006)
  - Toluene-d8 (S)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72134

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403828 [MSV/7213 (Lab ID: 1646422)
  - Chloromethane

QC Batch: MSV/72135

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403829 [MSV/7213 (Lab ID: 1646426)
  - Chloromethane

QC Batch: MSV/72146

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403892 [MSV/7214 (Lab ID: 1646653)

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

QC Batch: MSV/72146

B: Analyte was detected in the associated method blank.
- Chloromethane

QC Batch: MSV/72185

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404231 [MSV/7218 (Lab ID: 1648879)
  - Bromomethane
  - Chloromethane

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72135

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1646427)
  - Acetone

QC Batch: MSV/72185

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648880)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72134

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204425003

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 1646424)
  - Acetone
  - Chloroethane
- MSD (Lab ID: 1646425)
  - Acetone
  - Chloroethane

QC Batch: MSV/72135

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72146

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72158

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204563001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Method: **EPA 350.1**
Description: 350.1 Ammonia
Client: Environ_AR
Date: October 16, 2015

General Information:
21 samples were analyzed for EPA 350.1. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36347

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204425003,60204425020

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1649421)
  - Nitrogen, Ammonia

QC Batch: WETA/36348

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204543001,60204648002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1649426)
  - Nitrogen, Ammonia

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

Analyte Comments:

QC Batch: WETA/36347

D3: Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

- IW-72-201510 (Lab ID: 60204425024)
  - Nitrogen, Ammonia

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204425

Method: **EPA 353.2**
Description: 353.2 Nitrogen, NO2/NO3 unpres
Client: Environ_AR
Date: October 16, 2015

General Information:
21 samples were analyzed for EPA 353.2. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36248

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204416001,60204434002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1645652)
  - Nitrogen, NO2 plus NO3
  - Nitrogen, Nitrate

QC Batch: WETA/36250

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204425003,60204425006

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1645757)
  - Nitrogen, NO2 plus NO3

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204425

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

Batch: MSV/72185
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: WET/57799
[1] Ferrous iron performed in the field
Batch: WET/57807
[1] Ferrous iron performed in the field
Batch: WET/57810
[1] Field pH
Batch: WET/57811
[1] Field pH

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204425

ANALYTE QUALIFIERS

D3	Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MS	Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.
R1	RPD value was outside control limits.
RS	The RPD value in one of the constituent analytes was outside the control limits.
S2	Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Project: Fort Smith, AR
Pace Project No.: 60204426

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 07, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204426

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 16, 2015

General Information:
3 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204426

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 16, 2015

General Information:
3 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204426

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
4 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72146

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403892 [MSV/7214 (Lab ID: 1646653)
  - Chloromethane

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72146

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72158

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204563001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- MS (Lab ID: 1647434)
  - Acetone
  - Chloroethane
- MSD (Lab ID: 1647435)
  - Acetone
  - Chloroform

3 samples were analyzed for EPA 350.1. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36348

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204543001,60204648002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1649426)
  - Nitrogen, Ammonia

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204426

Method: **EPA 353.2**
Description: 353.2 Nitrogen, NO2/NO3 unpres
Client: Environ_AR
Date: October 16, 2015

General Information:
3 samples were analyzed for EPA 353.2. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36248

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204416001,60204434002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1645652)
  - Nitrogen, NO2 plus NO3
  - Nitrogen, Nitrate

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204426

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72146

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: WET/57807

[1]	Ferrous iron performed in the field

Batch: WET/57811

[1]	Field pH

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MS	Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.
R1	RPD value was outside control limits.
RS	The RPD value in one of the constituent analytes was outside the control limits.

RE: Project: Fort Smith
Pace Project No.: 60204443

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 07, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith
Pace Project No.: 60204443

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
5 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72146

B: Analyte was detected in the associated method blank.
- BLANK for HBN 403892 [MSV/7214 (Lab ID: 1646653)
  - Chloromethane

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72146

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

QUALIFIERS

Project: Fort Smith
Pace Project No.: 60204443

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72146

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

RE: Project: FORT SMITH AR
Pace Project No.: 60204563

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH AR
Pace Project No.: 60204563

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 20, 2015

General Information:
30 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

PROJECT NARRATIVE

Project: FORT SMITH AR
Pace Project No.: 60204563

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 20, 2015

General Information:
30 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH AR
Pace Project No.: 60204563

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 20, 2015

General Information:
45 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72181

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404213 [MSV/7218 (Lab ID: 1648794)
  - Chloromethane

QC Batch: MSV/72185

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404231 [MSV/7218 (Lab ID: 1648879)
  - Bromomethane
  - Chloromethane

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72185

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648880)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH AR
Pace Project No.: 60204563

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 20, 2015

QC Batch: MSV/72158

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204563001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1647434)
  - Acetone
  - Chloroethane
- MSD (Lab ID: 1647435)
  - Acetone
  - Chloroform

R1: RPD value was outside control limits.

- MSD (Lab ID: 1647435)
  - Ethylbenzene

QC Batch: MSV/72160

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204563008,60204563014,60204563019

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1647541)
  - Acetone
  - Chloroform
- MS (Lab ID: 1647543)
  - Acetone
- MS (Lab ID: 1653004)
  - 2-Butanone (MEK)
  - 2-Hexanone
  - Acetone
  - Styrene
- MSD (Lab ID: 1647542)
  - Acetone
- MSD (Lab ID: 1647544)
  - 1,1,2-Trichloroethane
  - Acetone
  - Chloroform
- MSD (Lab ID: 1653005)
  - 2-Butanone (MEK)
  - 2-Hexanone
  - Acetone
  - Styrene

R1: RPD value was outside control limits.

- MSD (Lab ID: 1647542)
  - Bromomethane
  - Styrene
- MSD (Lab ID: 1647544)
  - 1,1,2-Trichloroethane

Project: FORT SMITH AR
Pace Project No.: 60204563

Method: **SM 2320B**
Description: 2320B Alkalinity
Client: Environ_AR
Date: October 20, 2015

General Information:
30 samples were analyzed for SM 2320B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH AR
Pace Project No.: 60204563

Method: **SM 3500-Fe B#4**
Description: Iron, Ferric (Calculation)
Client: Environ_AR
Date: October 20, 2015

General Information:
30 samples were analyzed for SM 3500-Fe B#4. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

Batch Comments:

Ferrous iron performed in the field
- QC Batch: WET / 57808
- QC Batch: WET / 57809

Method: **EPA 350.1**
Description: 350.1 Ammonia
Client: Environ_AR
Date: October 20, 2015

General Information:
30 samples were analyzed for EPA 350.1. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36373

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204563001,60204563008

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1650418)
  - Nitrogen, Ammonia
- MS (Lab ID: 1650419)
  - Nitrogen, Ammonia

QC Batch: WETA/36375

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204563014,60204767013

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1650482)
  - Nitrogen, Ammonia
- MS (Lab ID: 1650492)
  - Nitrogen, Ammonia

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: FORT SMITH AR
Pace Project No.: 60204563

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72165
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/72181
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/72185
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: WET/57808
[1] Ferrous iron performed in the field
Batch: WET/57809
[1] Ferrous iron performed in the field
Batch: WET/57824
[1] Field pH
Batch: WET/57825
[1] Field pH

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

QUALIFIERS

Project: FORT SMITH AR
Pace Project No.: 60204563

ANALYTE QUALIFIERS

H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
MS	Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.
R1	RPD value was outside control limits.
RS	The RPD value in one of the constituent analytes was outside the control limits.

Sample Condition Upon Receipt

WO# : 60204563

60204563

Client Name: Environ

Optional
Proj Due Date:
Proj Name:

Courier: FedEx ☐ UPS ☐ VIA ☑ Clay ☐ PEX ☐ ECI ☐ Pace ☐ Other ☐ Client ☐

Tracking #: _____ Pace Shipping Label Used? Yes ☐ No ☑

Custody Seal on Cooler/Box Present: Yes ☑ No ☐ Seals intact: Yes ☑ No ☐

Packing Material: Bubble Wrap ☐ Bubble Bags ☑ Foam ☐ None ☐ Other ☐

Thermometer Used: CF +0.6 T-239 / CF +0.6 T-262 **Type of Ice:** (Wet) Blue None ☐ Samples received on ice, cooling process has begun.

Cooler Temperature: 4.1/2.2/4.7/2.2/1.0/2.4/1.7/2.3 (circle one)

Temperature should be above freezing to 6°C

Date and initials of person examining contents:

Chain of Custody present:	☑Yes	☐No	☐N/A	1. TB-13
Chain of Custody filled out:	☑Yes	☐No	☐N/A	2. MW-27, MW-26, IW-74, MW-89
Chain of Custody relinquished:	☑Yes	☐No	☐N/A	3. TB-14
Sampler name & signature on COC:	☑Yes	☐No	☐N/A	4. ITMW-1, ETMW-9, MW-87, ITMW-20
Samples arrived within holding time:	☑Yes	☐No	☐N/A	5.
Short Hold Time analyses (<72hr):	☑Yes	☐No	☐N/A	6. Fe2+ NO2 NO3 pH
Rush Turn Around Time requested:	☐Yes	☑No	☐N/A	7.
Sufficient volume:	☑Yes	☐No	☐N/A	8. TB-15
Correct containers used:	☑Yes	☐No	☐N/A	MW-28, MW-91, ITMW-6, MW-29
Pace containers used:	☑Yes	☐No	☐N/A	9. TB-16
Containers intact:	☑Yes	☐No	☐N/A	10. MW-96, MW-46R, MW-35R, MW97
Unpreserved 5035A soils frozen w/in 48hrs?	☐Yes	☐No	☑N/A	11. TB-17
Filtered volume received for dissolved tests?	☐Yes	☐No	☑N/A	12. MW-65, MW-32R, ITMW-16, ETMW-4
Sample labels match COC:	☑Yes	☐No	☐N/A	TB-18 ITMW-13, ITMW-12, ITMW-14, ITMW-11
Includes date/time/ID/analyses Matrix: WT				13.
All containers needing preservation have been checked.	☑Yes	☐No	☐N/A	TB-03 MW-84, ITMW-10
All containers needing preservation are found to be in compliance with EPA recommendation.	☑Yes	☐No	☐N/A	14.
Exceptions: ~~VOA~~, Coliform, O&G, WI-DRO (water)	☐Yes	☐No		Initial when completed / Lot # of added preservative
Trip Blank present:	☑Yes	☐No	☐N/A	Extra TB on listed on COC. extra MS
Pace Trip Blank lot # (if purchased): Oct 05 2015				15. Samples 1,2,3 and 4 received with TB.
Headspace in VOA vials (>6mm):	☐Yes	☐No	☐N/A	16.
Project sampled in USDA Regulated Area:	☐Yes	☐No	☐N/A	17. List State:
Additional labels attached to 5035A vials in the field?	☐Yes	☐No	☐N/A	18.

Client Notification/ Resolution: Copy COC to Client? Y / (N) Field Data Required? Y / (N)

Person Contacted: _____ Date/Time: _____

Comments/ Resolution: Emailed Wendy about extra set of trip blanks not on COC.

RE: Project: Fort Smith, AR
Pace Project No.: 60204621

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204621

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
5 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72186

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404233 [MSV/7218 (Lab ID: 1648882)
  - Chloromethane
  - Trichloroethene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72186

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648883)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72186

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204621

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72186

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: Fort Smith, AR
Pace Project No.: 60204623

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204623

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
2 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72186

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

- LCS (Lab ID: 1648883)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72181

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72186

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204623

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72181

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/72186

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: FORT SMITH, AR
Pace Project No.: 60204635

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60204635

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
2 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72186

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404233 [MSV/7218 (Lab ID: 1648882)
  - Chloromethane
  - Trichloroethene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72186

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648883)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72186

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60204635

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72186

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

RE: Project: FORT SMITH AR
Pace Project No.: 60204637

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 08, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: FORT SMITH AR
Pace Project No.: 60204637

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 16, 2015

General Information:
1 sample was analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72186

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404233 [MSV/7218 (Lab ID: 1648882)
  - Trichloroethene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72186

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648883)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72186

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: FORT SMITH AR
Pace Project No.: 60204637

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72186

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

RE: Project: Fort Smith, AR
Pace Project No.: 60204767

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 09, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204767

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 22, 2015

General Information:
25 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204767

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 22, 2015

General Information:
25 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MPRP/33491

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204767001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 1649052)
  - Iron
  - Manganese

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204767

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 22, 2015

General Information:
38 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

pH: Post-analysis pH measurement indicates insufficient VOA sample preservation.
- MW-61R-201510 (Lab ID: 60204767001)

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72185

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404231 [MSV/7218 (Lab ID: 1648879)
  - Bromomethane
  - Chloromethane

QC Batch: MSV/72186

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404233 [MSV/7218 (Lab ID: 1648882)
  - Chloromethane
  - Trichloroethene

QC Batch: MSV/72258

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404738 [MSV/7225 (Lab ID: 1650919)
  - Methylene chloride

QC Batch: MSV/72263

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404786 [MSV/7226 (Lab ID: 1651024)
  - Methylene chloride

All laboratory control spike compounds were within QC limits with any exceptions noted below.

QC Batch: MSV/72185

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648880)
  - Acetone

QC Batch: MSV/72186

L0: Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- LCS (Lab ID: 1648883)
  - Acetone

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72185

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72186

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72258

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72263

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72280

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/72387

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204767

Method: **SM 2320B**
Description: 2320B Alkalinity
Client: Environ_AR
Date: October 22, 2015

General Information:
25 samples were analyzed for SM 2320B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Additional Comments:

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204767

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72185
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/72186
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/72258
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/72263
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/72280
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: WET/57812
[1] Ferrous Iron performed in the field
Batch: WET/57813
[1] Field pH
Batch: WET/57814

BATCH QUALIFIERS

Batch: WET/57815
[1] Ferrous Iron performed in the field
Batch: WET/57825
[1] Field pH
Batch: WET/57838
[1] Ferrous Iron performed in the field.
Batch: MSV/72387
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
L0	Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
L1	Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
L3	Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

Client Name: Environ

Optional
Proj Due Date:
Proj Name:

Courier: FedEx ☐ UPS ☐ VIA ☐ Clay ☐ PEX ☐ ECI ☐ Pace ☐ Other ☐ Client ☑

Tracking #: _____ Pace Shipping Label Used? Yes ☐ No ☑

Custody Seal on Cooler/Box Present: Yes ☑ No ☐ Seals intact: Yes ☑ No ☐

Packing Material: Bubble Wrap ☐ Bubble Bags ☐ Foam ☑ None ☐ Other ☐

Thermometer Used: CF +0.6 T-239 / CF +0.6 T-262 **Type of Ice:** (Wet) Blue None (circle one) ☐ Samples received on ice, cooling process has begun.

Cooler Temperature: 1.7, 2.4, 4.8, 5.1, 4.0, 5.1, 2.1

Temperature should be above freezing to 6°C

Date and initials of person examining contents: BB 10/9/15

Chain of Custody present:	☑Yes ☐No ☐N/A	1.
Chain of Custody filled out:	☑Yes ☐No ☐N/A	2.
Chain of Custody relinquished:	☑Yes ☐No ☐N/A	3.
Sampler name & signature on COC:	☑Yes ☐No ☐N/A	4.
Samples arrived within holding time:	☑Yes ☐No ☐N/A	5.
Short Hold Time analyses (<72hr):	☑Yes ☐No ☐N/A	6. No 2/3
Rush Turn Around Time requested:	☐Yes ☑No ☐N/A	7.
Sufficient volume:	☑Yes ☐No ☐N/A	8.
Correct containers used:	☑Yes ☐No ☐N/A	
Pace containers used:	☑Yes ☐No ☐N/A	9.
Containers intact:	☑Yes ☐No ☐N/A	10.
Unpreserved 5035A soils frozen w/in 48hrs?	☐Yes ☐No ☑N/A	11.
Filtered volume received for dissolved tests?	☐Yes ☐No ☑N/A	12.
Sample labels match COC: Includes date/time/ID/analyses Matrix: WS	☑Yes ☐No ☐N/A	13.
All containers needing preservation have been checked.	☑Yes ☐No ☐N/A	
All containers needing preservation are found to be in compliance with EPA recommendation.	☑Yes ☐No ☐N/A	14.
Exceptions: VOA, Coliform, O&G, WI-DRO (water)	☑Yes ☐No BB 10/9	Initial when completed / Lot # of added preservative
Trip Blank present:	☑Yes ☐No ☑N/A	
Pace Trip Blank lot # (if purchased): Cov. / not purchased		15.
Headspace in VOA vials (>6mm):	☐Yes ☑No ☐N/A	16.
Project sampled in USDA Regulated Area:	☐Yes ☐No ☑N/A	17. List State:
Additional labels attached to 5035A vials in the field?	☐Yes ☐No ☑N/A	18.

RE: Project: Fort Smith, AR
Pace Project No.: 60204791

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 09, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60204791

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Environ_AR
Date: October 19, 2015

General Information:
2 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

pH: Post-analysis pH measurement indicates insufficient VOA sample preservation.
- TMW-11-201510 (Lab ID: 60204791001)

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/72263

B: Analyte was detected in the associated method blank.
- BLANK for HBN 404786 [MSV/7226 (Lab ID: 1651024)
  - Methylene chloride

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/72263

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60204791

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72263

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
pH	Post-analysis pH measurement indicates insufficient VOA sample preservation.

RE: Project: Fort Smith, AR
Pace Project No.: 60205243

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on October 07, 2015. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60205243

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Environ_AR
Date: October 19, 2015

General Information:
1 sample was analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60205243

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Environ_AR
Date: October 19, 2015

General Information:
1 sample was analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Description: 350.1 Ammonia
Client: Environ_AR
Date: October 19, 2015

General Information:
1 sample was analyzed for EPA 350.1. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36342

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204295001,60204382001

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1649388)
  - Nitrogen, Ammonia

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Project: Fort Smith, AR
Pace Project No.: 60205243

Method: **EPA 353.2**
Description: 353.2 Nitrogen, NO2/NO3 unpres
Client: Environ_AR
Date: October 19, 2015

General Information:
1 sample was analyzed for EPA 353.2. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WETA/36253

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60204408002

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1646208)
  - Nitrogen, Nitrite

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60205243

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/72146

[M5]	A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: WET/57807

[1]	Ferrous iron performed in the field

Batch: WET/57841

[1]	Field pH

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA recommended holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Data Validation Report

LEVEL II DATA VALIDATION REVIEW
4th Quarter Groundwater Monitoring Event 2015
Whirlpool Corporation
Fort Smith, Arkansas

Laboratory Sample Delivery Groups (SDGs): 60204289, 60204296, 60204767, 60205243, 60204563, 60204425, 60204426, 60204443, 60204621, 60204623, 60204635, 60204637, 60204791

Laboratory: PACE Analytical, Lenexa, Kansas

Reviewer: Wendy Stonestreet **Date Reviewed: October 26, 2015**

This data validation report has been prepared by Ramboll Environ US Corporation (Ramboll Environ) to assess the validity and usability of laboratory analytical data generated from samples collected during the fourth quarter groundwater sampling event at the Whirlpool Corporation, Fort Smith, Arkansas Site (the "site") from October 5, 2015 through October 9, 2015.

The analytical data were evaluated for quality assurance and quality control (QA/QC) based on the following document: *USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review* (June 2008). Analytical services for volatile organic compounds (VOC) analysis of 148 aqueous samples was provided by PACE Analytical of Lenexa, Kansas.

This report summarizes the QA/QC evaluation of the data according to precision, accuracy, representativeness, completeness and comparability relative to the project data quality objectives. This report provides a quantitative and qualitative assessment of the data and identifies potential sources of error, uncertainty, and bias that may affect the overall usability of the data.

One hundred and six groundwater samples,10 blind groundwater field duplicates, five matrix spike/matrix spike duplicate (MS/MSD), seven equipment rinsate blanks and 25 trip blanks were submitted to the laboratory for VOC analysis and evaluated in this data validation report. The following table lists the sample identifications by SDG.

Field ID	Sample Type	Lab ID	Matrix	Analyses

Sample Type: SA = Sample TB = Trip Blank FD = Field Duplicate RB = Rinsate Blank
MS =Matrix Spike MSD = Matrix Spike Duplicate
VOCs = Volatile Organic Compounds by USEPA Method SW-846 8260B by Gas Chromatography/Mass Spectrometry (GC/MS) Medium Level.

The following laboratory submittals were evaluated:

- Data Package Completeness,
- Sample Preservation and Holding Times,
- Blanks,
- Surrogate Compound Recoveries
- Laboratory Control Samples,
- Matrix Spike/Matrix Spike Duplicates,
- Laboratory and Field Precision,
- Overall Assessment of Data.

General Overall Assessment:

_____ Data are usable without qualification.

__X__ Data are usable with qualification (noted below).

_____ Some or all data are unusable for any purpose (detailed below).

Case Narrative Comments: Any case narrative comments concerning data qualification were noted below.

1.0 Data Package Completeness

Were all items delivered as specified on the COC and is the data package complete?

Yes, the analysis was performed as requested on the chain-of-custody records. All samples were received by the laboratory and analyzed properly with appropriate corrective actions taken when appropriate. No data points were rejected. The data completeness measure for this data package is 100% and is acceptable.

2.0 Laboratory Case Narrative, Sample Preservation and Cooler Receipt Form

Were problems noted in the laboratory case narrative or cooler receipt form?

Yes, the laboratory case narrative indicated the following:

- **SDG: 60204289 -** The laboratory indicated that chloromethane and trichloroethene were detected in a method blank. See Section 4.0 for further discussion and resultant data qualification.
- **SDG: 60204296 -** The laboratory indicated that chloromethane was detected in a method blank. See Section 4.0 for further discussion and resultant data qualification. The laboratory indicated that the laboratory control sample (LCS) was reported outside of laboratory control requirements for acetone. See Section 7.0 for further discussion and resultant data qualification.
- **SDG: 60204767 -** The laboratory indicated the post-analysis pH measurement was greater than 2.0. See Section 3.0 for further discussion and resultant data qualification. The laboratory indicated that bromomethane, chloromethane and methylene chloride were detected in a method blank. See Section 4.0 for further discussion and resultant data qualification. The laboratory indicated that the laboratory control sample (LCS) was reported outside of laboratory control requirements for acetone. See Section 7.0 for further discussion and resultant data qualification.
