Second Quarter 2016 Progress Report
April 1, 2016 through June 31, 2016
Whirlpool Facility - Fort Smith, Arkansas

1. INTRODUCTION

This quarterly report has been prepared in accordance with the Remedial Action Decision Document (RADD) issued by the Arkansas Department of Environmental Quality (ADEQ) on December 27, 2013 and updated in November 2015, for the Whirlpool Fort Smith, Arkansas, site (Site). This Second Quarter Progress Report (Report) is not forward looking. This report includes a description of the work completed during the second quarter of 2016, findings of the activities completed in this reporting period, issues identified and resolved, and deviations or schedule adjustments from plans and correspondence submitted to the ADEQ. Details supporting the Summary of Findings are provided in the documents attached to this Report.

2. SUMMARY OF FINDINGS

- Groundwater monitoring data suggests natural attenuation of trichloroethene (TCE) is continuing to occur via a combination of biological and other natural attenuation mechanisms in both onsite and offsite groundwater.
- The location of the hydraulic divide between the north and south groundwater plume boundaries continued to be south of Ingersoll Avenue, which is consistent with previous reporting periods and historic results.
- The installation of eight sentinel wells to the south of the former manufacturing building has refined the understanding of the southern flow regime where the hydraulic gradient is gradual to the south beneath the facility but steepens to the east and to the southwest beyond the former manufacturing building.
- Second quarter groundwater monitoring data re-confirms broadly decreasing to stable trends for TCE concentrations.
  - Plume boundary well data continue to show results generally consistent with historical TCE concentrations.
  - Offsite groundwater data are similar to previous monitoring events and continue to show predominantly decreasing to stable TCE concentration trends.
  - Onsite groundwater data continue to show predominantly decreasing to stable TCE concentration trends. The data demonstrates the positive influence of the in-situ chemical oxidation (ISCO) injections.
- Based on second quarter groundwater data, the average minimum and maximum quantities of TCE in groundwater associated with the Site has been assessed again for the north, south, and northeast groundwater plumes. The quantity of TCE in the north plume is estimated to range from less than 1 gallon to 2 gallons, the total quantity of TCE in the south plume is estimated to range from 9 to 31 gallons, and the quantity of TCE in the northeast plume is estimated to contain less than 1 gallon; for a combined volume of TCE in groundwater ranging from 11 to 34 gallons. The north plume remains with the boundaries of the properties north of the site with deed restrictions precluding installation of wells (i.e. well ban area), the south plume remains on the property, and the northeast plume extends beyond the northeast property boundaries but no off-site

monitoring exhibit concentrations of MCLs regarding the northeast plume. See Section 4 of this report for the total estimated quantity of TCE in groundwater and soil at the site.

- Risk estimates for vapor intrusion from groundwater in the neighborhood remain below ADEQ's risk management limits of 10^{-4} and 1 for cumulative cancer risk and non-cancer hazards, respectively.
- Vapor intrusion modeling using perched water confirms the modeling results using volatile organic compound (VOC) concentrations in water collected from groundwater monitoring wells.
- There are no identified TCE impacts to offsite surface water or sediment.
- Monitoring to assess the impact of ISCO injection events measured decreases in TCE concentrations in groundwater source area wells, the supplemental neck area, and Areas 2 and 3 of approximately 79%, 96% and 86%, respectively from 2014 through the second quarter of 2016 (Attachment A – Groundwater Monitoring Report and the Groundwater Monitoring Plan (August 2016) provide more discussion regarding rebound and TCE concentration reduction after ISCO treatment).
- Monitoring to assess the impact of ISCR injection has shown TCE concentration decreases in area wells by up to 74%.

3. REVIEW OF ACTIVITIES COMPLETED – SECOND QUARTER 2016

During the weeks of April 18, 2016 and between May 2 and 5, 2016, Second Quarter 2016 groundwater samples were collected via low flow sampling methodologies. Groundwater samples were collected from a total of 104 wells to assist in evaluating the entire Site including the northeast corner, Boys and Girls Club property, ISCO monitoring, ISCR pilot study monitoring, and plume definition. The groundwater samples were analyzed for parameters as outlined in the RADD except for perched groundwater wells and select temporary ISCR monitoring wells which were analyzed for VOCs only.

In addition to the RADD required sampling, additional groundwater samples were collected from select wells concurrent with the second quarter groundwater sampling event to evaluate the performance of ISCO and ISCR events completed in accordance with ADEQ approved permits. The data from the ISCO and ISCR performance monitoring is presented and evaluated in the Second Quarter 2016 Groundwater Monitoring Report (Attachment A).

Key second quarter observations based on the groundwater monitoring data include the following:

- The groundwater potentiometric surface observed during the second quarter event is consistent with that historically observed at the Site except for the addition of a southwestern gradient in the southern plume identified due to the installation of sentinel wells.

- The direction of the lateral hydraulic gradient continues to be influenced by a divide located just south of Ingersoll Avenue with directions of the hydraulic gradient predominantly to the northeast and south on either side of the general divide.
  - Groundwater north of the divide is flowing in a northeasterly direction; and
  - Groundwater south of the divide is flowing in a south/southeasterly direction with a southwest component at the southwest corner of the facility.
- Second quarter event groundwater monitoring data shows predominantly stable to decreasing trends for TCE concentrations.
  - Plume boundary well data continue to show results predominantly consistent with historical TCE concentrations;
  - Offsite well data are similar to previous monitoring events and continue to show stable to decreasing TCE concentration trends; and
  - Onsite well data continue to show predominantly stable to decreasing TCE concentration trends; the data reflects the impact of the ISCO injections.
- The combination of chemical, geochemical and microbial data from the second quarter event are similar to the quarterly monitoring events from 2014 through the first quarter of 2016. The VOC results demonstrate that reductive dechlorination is occurring in various locations both on and offsite.
- The ISCO events performed in 2014 and 2015 continue to be effective with TCE concentration reductions through the second quarter of 2016 as follows:
  - Approximately 79% decrease at source area wells MW-25, MW-85 and MW-86;
  - Supplemental neck area decrease of approximately 96% since May 2014; and
  - Approximately 86% decrease at wells in Areas 2 and 3.

  The calculations for percent reduction in TCE concentrations in groundwater in the ISCO treatment areas will be modified in future progress and monitoring reports in accordance with the calculations and data presentation for rebound assessment presented in the revised Groundwater Monitoring Plan submitted to ADEQ on August 10, 2016.
- The ISCR event performed in September/October 2015 is proving to be effective with TCE concentrations reducing as follows:
  - The sum of the TCE concentrations for MW-61R, TMW-10 and TMW-11, 210 days after ISCR injection, showed a decreasing concentration trend from approximately 238 micrograms per liter (µg/L) to 136 µg/L (~43% decrease).
  - Monitoring to assess the impact of ISCR injection has shown TCE concentration decreases in area wells by up to 74%.

During the second quarter of 2016, a soil vapor sampling event was attempted the week of May 2, 2016. Soil vapor samples were not able to be collected this quarter. VP-9 did not contain water but collection of a soil vapor sample was not possible even after maintaining a sustained vacuum. Perched water filled the vapor points at locations VP-5, VP-6, VP-7, VP-8, VP-10, VP-

12, VP-14, and VP-15. The water in these vapor sampling points could not be purged from the sampling train. Water samples were collected from these points.

Key second quarter observations based on the soil vapor and shallow groundwater monitoring data include the following:

- Risk estimates for potential vapor intrusion from offsite groundwater into offsite residences are below ADEQ's risk management limits of 10^{-4} and 1 for cumulative cancer risk and non-cancer hazards, respectively.
- Vapor intrusion modeling using perched water confirms the modeling results using VOC concentrations in water collected from groundwater monitoring wells.

The Second Quarter 2016 Soil Vapor Monitoring/Vapor Intrusion Report further discusses the sampling event as well as evaluates the water and soil vapor data. This report is included as Attachment B.

During the second quarter of 2016 indoor air and sub-slab vapor samples were collected to evaluate the indoor air of the former manufacturing building. This report is pending.

4. QUANTITY OF TCE

Estimated average minimum and maximum quantities of TCE in groundwater were calculated for the Site using the results of the second quarter groundwater monitoring event. The distinction between the north and south groundwater plumes is identified based upon the consistent groundwater divide north of the Whirlpool manufacturing facility and south of Ingersoll Avenue and the reduction or elimination of TCE in groundwater near the hydraulic barrier. The quantity of TCE calculations are based on separating the northern and southern plumes at the hydraulic divide at the location of MW-24 (see Figures 2A and 2B, Attachment A – Second Quarter 2016 Groundwater Monitoring Report). The quantity of TCE in the northeast plume is also included in the calculations.

The estimated quantities of TCE included calculation of the volume of groundwater based upon the distinct areas within the plumes (i.e. area of plume within the isoconcentration lines on Figures 2A and 2B of Attachment A), average saturated thickness and total porosity (i.e. area x average saturated thickness x porosity = volume of water). The volume of water and minimum and maximum TCE concentrations based upon the plume boundaries were used to calculate the mass of TCE within each section of the plume. The volume of TCE was then determined based upon the specific gravity of TCE. Parameters used in the calculation of TCE quantities are presented below. Calculations are presented in Attachment C, Table 2.

Northern plume parameters:

- Plume area of approximately 464,000 square feet (ft^2) consisting of 300,000 ft^2 for the portion of the plume with TCE concentrations ranging from 5 µg/L to 100 µg/L; 164,000 ft^2 for the portion of the plume with TCE concentrations ranging from 100 µg/L to 1,000 µg/L; and no portion of the plume exhibits TCE concentrations greater than 1,000 µg/L;

- Average saturated thickness of 3.7 feet (see Attachment C, Table 1);
- Total porosity of 0.4; and
- TCE specific gravity of 1.465.

Southern plume parameters:

- Plume area of approximately 1,121,000 ft^2 consisting of approximately 501,000 ft^2 for the portion of the plume with TCE concentrations ranging from 5 µg/L to 100 µg/L; 411,000 ft^2 for the portion of the plume with TCE concentrations ranging from 100 µg/L to 1,000 µg/L; 182,000 ft^2 for the portion of the plume with TCE concentrations ranging from 1,000 µg/L to 10,000 µg/L; and 27,000 ft^2 for the portion of the plume with TCE concentrations greater than 10,000 µg/L, (the southern plume delineation has been refined to reflect additional data resulting from the installation of down-gradient well MW-182 and further down gradient sentinel wells);
- Average saturated thickness of 8.3 feet (see Attachment C, Table 1);
- Total porosity of 0.4; and
- TCE specific gravity of 1.465.

Northeastern plume parameters:

- Plume area of approximately 240,000 ft^2 consisting of 160,000 ft^2 for the portion of the plume with TCE concentrations ranging from 5 µg/L to 100 µg/L; and, 80,000 ft^2 for the portion of the plume with TCE concentrations ranging from 100 µg/L to 1,000 µg/L;
- Average saturated thickness of 4.4 feet (see Attachment C, Table 1);
- Total porosity of 0.4; and
- TCE specific gravity of 1.465.

Based on the plume information listed above, the following ranges of the quantities of TCE distributed throughout the respective plumes were calculated:

Plume Location	Calculated Minimum Volume	Calculated Maximum Volume
Northern Plume	Less than 1 gallon	2 gallons
Southern Plume	9 gallons	31 gallons
Northeastern Plume	Less than 1 gallon	1 gallon

Therefore the total average minimum and maximum quantities of TCE in groundwater associated with the Site are approximately 11 to 34 gallons of TCE.

As described in the “Response to ADEQ Comments on the Fourth Quarter 2015 Progress Report” (April 2016), the combined estimated quantity of TCE currently adsorbed in

unsaturated and saturated soil and the TCE dissolved in the three groundwater plumes is estimated to range from approximately 20 to 70 gallons based upon investigation and monitoring events at the Site. The combined estimated quantity of TCE ranging from approximately 20 to 70 gallons consists of:

- Six to 26 gallons of TCE in unsaturated soil (source area dimensions adjusted to 250 feet long, 10 feet wide and an average thickness of unsaturated soil of 18.5 feet);
- One to 8 gallons of TCE in saturated soil;
- Nine to 31 gallons of TCE in groundwater in the south plume;
- Less than 1 to 2 gallons of TCE in groundwater in the north plume; and
- Less than 1 gallon of TCE in groundwater in the northeast plume.

5. DATA AVAILABLE IN THIS QUARTER

Analytical data for the 104 wells sampled, including water levels from this sampling event, are included in the Second Quarter 2016 Groundwater Monitoring Report included as Attachment A.

Analytical data for the soil vapor monitoring are included in the Second Quarter 2016 Soil Vapor Monitoring/Vapor Intrusion Report included as Attachment B.

Calculations for the estimation of TCE mass for the second quarter are included as Attachment C.

6. ISSUES ENCOUNTERED AND RESOLUTION

No issues where encountered during the second quarter of 2016.

7. SCHEDULE

There are no schedule deviations to report in the second quarter of 2016.

1 Introduction

Ramboll Environ US Corporation (Ramboll Environ) has prepared this Second Quarter 2016 Groundwater Monitoring Report (Report) for the Fort Smith, Arkansas, Site (Site) on behalf of Whirlpool Corporation (Whirlpool). The work was performed and the report prepared in accordance with the Remedial Action Decision Document (RADD) issued by the Arkansas Department of Environmental Quality (ADEQ) on December 27, 2013 and revised in November 2015 (Revised RADD), ADEQ comment letters and Ramboll Environ/Whirlpool responses to previous quarterly monitoring reports[1].

Whirlpool has been monitoring the groundwater at the Site since 1989. This report is Attachment A of the Second Quarter 2016 Progress Report for the Site.

This report describes the results of the groundwater monitoring event performed on April 18, 2016 and May 2-5, 2016. This event included measuring water levels on April 18, 2016 and May 2, 2016, from 106 wells followed by the collection of groundwater samples from 104 wells consisting of 76 wells denoted as plume boundary, onsite, or offsite wells according to the RADD plus two wells sampled on the Boys and Girls Club property (MW-183 and MW-184), six wells sampled for in-situ chemical oxidation (ISCO) monitoring (MW-23, MW-24, MW-81, MW-82, IW-101, IW-115), two wells sampled for in-situ chemical reduction (ISCR) (TMW-10 and TMW-11) and 18 additional wells sampled to support the evaluation of the source area, plume boundary and shallow groundwater.

In addition, to the monitoring performed during the second quarter of 2016, the following events occurred that will impact future monitoring at the site:

- In early August 2015, MW-66, MW-67 and MW-193 were abandoned due to the Jenny Lind Road construction project. New wells were installed, with ADEQ approval, west of Jenny Lind Road to continue monitoring the northeast portion of the north plume.
- As requested, future groundwater monitoring reports will include assessment of rebound and ISCO effectiveness in accordance with the revised Groundwater Monitoring Plan submitted to ADEQ for review on August 11, 2016.

ADEQ Comments on the Fourth Quarter 2015 Progress Report dated February 29, 2016; and Ramboll Environ/Whirlpool responses dated April 8, 2016; ADEQ Supplemental Comments on the Fourth Quarter Progress Report dated June 2, 2016; and Ramboll Environ/Whirlpool response dated July 6, 2016. ADEQ Comments on the First Quarter 2016 Progress Report dated June 9, 2016; and Ramboll Environ/Whirlpool responses dated July 13, 2016.

2 Groundwater Sample Collection and Onsite Activities

Ramboll Environ performed the Second Quarter 2016 Groundwater Monitoring Event (Second Quarter event) on behalf of Whirlpool on April 18, 2016, and during the week of May 2, 2016. Activities performed during the monitoring event included measuring water levels in site wells and collecting groundwater samples for analysis of volatile organic compounds (VOCs) and monitored natural attenuation (MNA) parameters.

Constituents of concern (COCs) in groundwater as identified by the RADD for this Site include trichloroethene (TCE) and related degradation (i.e. daughter) products (Table 1). The groundwater monitoring wells listed in the RADD for compliance with quarterly monitoring are listed in Table 2. The COCs and additional geochemical parameters were analyzed in collected groundwater samples to evaluate the effectiveness of MNA in support of the natural degradation of site related chlorinated compounds.

The following sections describe the groundwater monitoring activities completed during the Second Quarter event.

2.1 Static Water Level Measurements

On April 18, 2016 and May 2, 2016, static water levels and total well depths were measured in a total of 106 monitoring wells. Monitoring wells were opened to allow water levels to equilibrate to atmospheric conditions prior to their measurement using an electronic water level meter. The instrument was calibrated by the manufacturer prior to its purchase and therefore does not require calibration in the field. The water levels were measured to the nearest 0.01 foot with an accuracy of 0.02 feet per the manufacturer's specification. The water level meter probe and tape (i.e. the only non-dedicated sampling equipment) were decontaminated prior to use at each well by spraying and scrubbing the probe and tape with Alconox detergent mixed with distilled water and then rinsing the probe and tape with distilled water prior to being wiped dry.

The Second Quarter event static water level measurements are presented in Table 3 along with the previous four quarters of water level measurements recorded from project wells.

2.2 Monitoring Well Sampling

After static water level measurement activities were completed, low-flow sampling was performed at each well via the use of a peristaltic pump and dedicated polyethylene tubing. The tubing was placed at a depth within the well approximately equal to the midpoint of the well screen. The wells were then purged, via United States Environmental Protection Agency (USEPA) Low Stress (low flow) purging procedures (USEPA, 1996); at a rate generally less than 0.1 liters (L) per minute to minimize the amount of drawdown in the well and to reduce the likelihood of elevated turbidity. Flow rates and drawdown were checked continuously during purging. Purge water was then placed into a container prior to transfer to the onsite water holding tank for ultimate proper disposal.

Water quality parameters were measured via a water quality probe and flow thru cell. Instruments were calibrated daily prior to the start of sampling. All instruments were calibrated at a minimum of once per day. Calibration logs are included as Appendix A. Readings were recorded approximately every five minutes until the parameters stabilized. Stabilization was considered obtained when three consecutive rounds of parameter readings met the following:

- Turbidity: +/- 10% for values greater than 10 Nephelometric Turbidity Unit (NTU), or less than 10 NTU;
- Dissolved Oxygen (DO): +/- 10% for values greater than 0.5 milligrams per liter (mg/L);
- Specific Conductance: +/- 3%;
- Temperature: +/- 1°C;
- pH: Within +/- 0.1 standard units; and
- Oxidation Reduction Potential (ORP): Within +/- 10 millivolts (mV).

Table 4 presents a summary of results for measured field parameters for the 2016 Second Quarter event.

The groundwater samples were obtained by directly filling the laboratory provided sampling bottles from the pump discharge. VOCs were collected in three 40 milliliter (mL) glass vials that contained hydrochloric acid as a preservative per standard procedures. Samples for assessing Quality Assurance/Quality Control (QA/QC) metrics were collected by alternately filling investigative and QA/QC sample bottles for each parameter. VOC sample bottles for both the investigative and the QA/QC sample were completely filled, purged of headspace and sealed. All other samples (i.e. for non VOC analysis) were collected in appropriate bottles as specified by the method and/or laboratory. Hach Test Kits (all verified with valid expiration dates) were used to measure ferrous iron in the field. Groundwater samples for analysis of dissolved hydrogen concentration were collected by the Microseeps gas stripping procedure (Microseeps, 2014).

A total of 104 groundwater samples, ten field duplicate samples, five matrix spike/matrix spike duplicate (MS/MSD) samples and seven equipment blanks were collected during the 2016 Second Quarter event. Duplicate samples were taken at a frequency of one duplicate sample per 10 groundwater monitoring samples. Duplicate samples were collected from MW-41R-201605, MW-46R-201605, MW-58R-201605, MW-91-201605, MW-92-201605, MW-182-201605, IW-74-201605, ITMW-1-201605, ITMW-7-201605 and ITMW-10-201605.

Because monitoring wells contain dedicated or new tubing, the only equipment transferred and used from well to well is the water level meter used to monitor well water levels during purging and stabilization prior to sampling and tube weights. Equipment rinsate blanks were collected after each of the seven water level meters used during the monitoring event were decontaminated to evaluate field decontamination procedures. Equipment rinsate blanks were collected by pouring ASTM Type II deionized water over the decontaminated water level meter probe and tape into the appropriate sample containers. The rinsate blanks were collected after decontamination procedures at MW-46R (EB-03-201605 at 17:00), MW-40R (EB-02-201605 at 17:00), VP-12 (EB-01-2010605 at 16:45), MW-38 (EB-05-201605 at 15:35),MW-41R (EB-04-201605 at 17:15) MW-93 (EB-06-201605 at 14:55) and MW-12 (EB-08-201605 at 15:32). The

preservation and analysis of the equipment rinsate blanks was identical to those of the associated environmental samples.

Sample containers were labeled and packed on ice in insulated coolers before being shipped under chain of custody via overnight courier or FedEx to Pace Analytical Services in Lenexa, Kansas (VOC and MNA parameters), via FedEx to Microseeps in Pittsburg, Pennsylvania and via FedEx to Microbial Insights in Knoxville, Tennessee (Microbial parameters). Chain of custody procedures were followed from the point of sample collection through completion of analysis. The laboratories used infrared thermometers to take sample temperatures upon sample receipt in accordance with USEPA "Manual for the Certification of Laboratories Analyzing Drinking Water" fifth edition.

2.3 Other Site Monitoring Activities

During this quarter, groundwater samples were also collected from MW-173 through MW-177 and MW-179 through MW-181. These wells are screened shallow to assist in evaluating the potential for vapor intrusion from groundwater and as such the data from these wells is further discussed in Attachment B, Second Quarter 2016 Soil Vapor Monitoring and Vapor Intrusion Assessment Report.

Due to slow recovery rates, low-flow sampling techniques were not used at MW-181 and MW-90. These wells were purged dry once and were then allowed to recover prior to collection of the sample. The recovery rates and subsequent sampling for the indicated wells were all less than 24 hours. Adequate sample volume was present for all analytical fractions from the wells designated for sampling with the exception of MW-90, MW-97, MW-98 and MW-193 for Hydrogen analysis. See Section 3.4 Data Quality Assessment for additional information.

3 Results

The following sections present a discussion of the hydrogeology, analytical methods, the results of the laboratory analyses and an assessment of data quality and usability.

3.1 Hydrogeology

Gradient

Water levels from 106 wells at the Site were collected during the Second Quarter event (Table 3) as discussed in Section 2.1. These wells were monitored during this event to provide current potentiometric information regarding groundwater flow direction at the Site.

The static water level measured in the wells ranged from less than a foot to just over 23 feet below top of the well casing (btwc) during the monitoring event. Figure 1A shows the contours of the groundwater elevations based on the monitoring well static water level measurements completed on May 2, 2016, for this Second Quarter event. Based on the current potentiometric maps, the lateral hydraulic gradient, as an indication of the likely direction of groundwater flow, is generally consistent with historical conditions, including the groundwater gradient divide that trends west to east north of the facility building. The hydraulic gradient is near zero in the area that extends from the western portion of the north parking lot near Ingersoll Avenue to just north of Jacobs Avenue. North of Jacobs Avenue, the hydraulic gradient is directed to the north/northeast. South of this flat area, near the facility building, the direction of the hydraulic gradient is to the southeast then begins to trend to the northeast at the northeastern extent of the facility. The installation of eight additional (sentinel) wells to the south has refined the understanding of the southern flow regime (Ramboll Environ, 2015). The third round of groundwater data collected since installation of the sentinel wells continues to indicate a potential second gradient divide beneath the facility, the axis of which trends from northwest to southeast. The gradient(s) steepen to the east-northeast east of the former manufacturing building and southwest beyond the extent of the former manufacturing building.

A linear interpolation of the gradient between four groups of wells was completed in order to assess the groundwater flow direction and gradients as follows:

- Southeast from MW-25 to MW-192, 0.001 feet/foot;
- Southwest from MW-182 to MW-186, 0.01 feet/foot;
- Southwest from ITMW-5 to MW-187, 0.003 feet/foot; and
- Northeast from MW-87 to MW-183, 0.015 feet/foot.

Although the gradient remains relatively flat beneath the building (i.e. 0.001 feet/foot), the gradient steepens somewhat towards the southwest at the southwest corner of the building. The gradient increases from 0.003 feet/foot to 0.01 feet/foot towards the southwest based upon the May 2016 water level measurements.

Shallow Monitoring Wells

Groundwater elevations from shallow groundwater wells (MW-174 through MW-177) located along the north side of Jacobs Avenue and MW-178 (located immediately south of Ingersoll Avenue) were used to evaluate shallow horizontal gradient. Static water levels along Jacobs Avenue decrease from west to east; from a high of 469.0 feet at MW-177 to a low of 460.01 feet at MW-174. The calculated shallow groundwater gradient west to east based on these two wells is 0.01 feet/foot. Static water levels in the nearby deeper groundwater wells also decrease from west (MW-70, 464.59) to east (MW-63R, 460.79) with a resulting gradient of 0.005 feet/foot. The highest shallow groundwater elevations were measured in MW-178 and adjacent shallow well MW-180 (472.05 feet and 471.93 feet, respectively). These results suggest that the shallow groundwater horizontal flow gradient mimics the deeper groundwater flow gradient to the east/northeast based on the number and location of shallow groundwater monitoring wells available.

Groundwater elevations from shallow groundwater wells MW-174 through MW-178 were also compared to groundwater elevations from nearby deeper monitoring wells to evaluate vertical gradient. MW-175 is located approximately at the midpoint between deeper groundwater monitoring wells MW-46R and MW-56R allowing the comparison of groundwater elevations at MW-175 to the average of the groundwater elevations at MW-46R and MW-56R. The vertical gradients are summarized in Table 5. Based on this evaluation observations are as follows:

- Downward vertical gradient (-0.45 feet/foot) at the south western well grouping MW-178/MW-83;
- Downward gradient (-0.42 feet/foot) at MW-177/MW-70;
- Slight upward gradient (0.005 feet/foot) at MW-176/MW-46R;
- Slight downward gradient (-0.04 feet/foot) at MW-175/MW-46R and MW-56R; and
- Upward gradient (0.14) at the eastern most well pairing, MW-174/MW-63.

As shown on Figure 1B, the difference in vertical gradients observed during the second quarter 2016 sampling event were nominally greater at three of the five locations but generally consistent with the previous (first quarter) sampling event at the well groupings evaluated. The very slight increase in difference in the vertical gradients may be associated with above average rainfall that occurred in the area in March (5.31 inches) and April (6.05 inches) before the monitoring was conducted in May.

The observed vertical gradients suggest that the vertical gradients vary over time but there is a general trend by location. For the second quarter 2016, there is a downward hydraulic gradient between the silty clayey sand interval and Basal Transmissive Zone to the west that becomes nearly neutral (less than 0.1 feet/foot difference), then slightly upward to the east. The first quarter differences at each set of wells used for the comparison were all less than 0.08 feet/foot difference in magnitude. The monitoring data continue to suggest the shallow and Basal Transmissive Zones are connected hydraulically based on similar horizontal gradients and the presence of TCE contamination in both zones.

3.2 Analytical Methods

Seventy-six groundwater samples were collected from plume boundary wells, onsite wells, offsite wells and were analyzed for the following parameters in accordance with the indicated laboratory methods:

- VOCs: SW846 5030B/8260B
- Chloroethanol: SW846 8015
- Total Iron: SW846 6010
- Total Manganese: SW846 6010
- Alkalinity: SM 2320B
- Ferric Iron: SM 3500-Fe B#4
- Sulfide: SM 4500-H+B
- Sulfate: EPA 300.0
- Chloride: EPA 300.0
- Ammonia: EPA 350.1
- Nitrate: EPA 353.2
- Nitrite: EPA 353.2
- Total Nitrogen: EPA 353.2
- Carbon Dioxide: SM 4500-CO2 D
- Total Organic Carbon: SM 5310C
- Phosphate: SM 4500P-E
- Volatile Fatty Acids: AM21G
- Methane: AM20GAX
- Ethane: AM20GAX
- Ethene: AM20GAX
- Acetylene: AM20GAX
- Hydrogen: AM20GAX

Twenty-eight groundwater samples were collected from wells not specifically mentioned in the RADD and were also analyzed for VOCs. Select wells were also sampled for MNA parameters as described above.

The analytical methods listed above are contained in the USEPA's Test Methods for Evaluating Solid Waste (SW-846 Third Edition, 1983); the American Public Health Association (APHA), American Water Works Association (AWWA) and Water Environment Federation (WEF) Joint Editorial Board's Standard Methods for the Examination of Water and Wastewater (SM 2 First Edition, 2005); and Analysis of Dissolved Methane, Ethane and Ethylene in Groundwater by the laboratory modified AM20GAX Standard Gas Chromatographic Technique published in the RSKSOP-175 SOP that was prepared for the use of the Groundwater Ecosystems Restoration Division of the USEPA.

3.3 Analytical Results

All VOC analytical data from all wells were subjected to data validation in accordance with the USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic

Methods Review (August 2014). The laboratory analytical reports for the samples are presented in Appendix B. Summaries of analytical results (i.e. detected compounds) for samples collected during the Second Quarter event are presented in Table 6. This table includes data qualifiers that may have been assigned from validation. A discussion of the field and laboratory analytical results for this event is presented below.

3.3.1 VOC Results

This section presents an evaluation of the VOC data that were collected from the Site during the 2016 Second Quarter event. TCE results for the Second Quarter event are presented on Figures 2A and 2B.

Plume Boundary Wells

In accordance with the RADD, 27 monitoring wells are identified as plume boundary wells (Table 2) at the Site. VOC concentrations were detected above the RADD remedial action levels (RALs) (Table 1) in three of the 27 samples collected from the plume boundary wells. Tabulated VOC concentrations measured in these wells during the 2016 First Quarter event are presented in Table 6.

Notable results from the first quarter sampling event include:

- ITMW-6: 1,1-dichloroethane (1,1-DCA) concentration of 4.0 micrograms per liter (µg/L) (this result is consistent with historical ranges for ITMW-6 and is lower than the highest concentration of 1,1-dichloroethane in October 2013 at 6.7 µg/L);
- MW-36R: Bromomethane concentration of 29.2 µg/L; and
- MW-61R: TCE concentration of 5.3 µg/L.

Consistent with historical analytical results for the Site, all other plume boundary well VOC results were reported as non-detect or at concentrations less than RALs.

The only detection of TCE in a boundary well above the RAL (5 µg/L) during the Second Quarter event was the slightly elevated result of 5.3 µg/L at MW-61R.

Offsite Wells

In accordance with the RADD, 14 monitoring wells are identified as offsite wells (Table 2)[2]. The offsite wells include those installed at offsite properties to the north and northeast of the Whirlpool northern property boundary that are not otherwise identified as plume boundary wells.

[2] The north and east property boundaries of the site have been changed to accommodate the expansions of Ingersoll Avenue and Jenny Lind Road, respectively. Therefore, the north property boundary has been moved south of Ingersoll Avenue and the east property boundary moved further west. Several wells to the north previously identified as onsite are now offsite wells. The designation of onsite and offsite wells will be refined and presented in the pending groundwater monitoring plan for the site groundwater monitoring plan as described in the Response to ADEQ Comments on the Fourth Quarter Progress Report (April 8, 2016) and Response to ADEQ Comments on the Two Year Technical Review Report (April 15, 2015).

Tabulated VOC concentrations measured in the 14 offsite monitoring wells during the 2016 first quarter event are presented in Table 6.

During the Second Quarter event, the highest concentration of TCE detected in groundwater samples from the offsite wells was 734 µg/L collected from MW-56R. This is an increase from the previous highest concentration documented at this location (618 µg/L) in March 2014.

Just up-gradient of MW-56R, trends are stable at MW-46R where concentrations have primarily ranged between 410 to 472 µg/L since 2012 (in April 2015 the TCE concentration in the monitoring sample and duplicate at MW-46R were 482 µg/L and 220 µg/L J, respectively; and this data was excluded from the previous statement due to the disparity in the monitoring and duplicate sample results).

Onsite Wells

In accordance with the RADD, 35 monitoring wells are identified as onsite wells (Table 2). Onsite wells designated by the RADD do not include wells identified as plume boundary wells that are located onsite. Onsite wells include specific wells north of Ingersoll Avenue and some wells south of Ingersoll Avenue which are north of the Whirlpool northern property fence line, but still located on property owned by Whirlpool Corporation. The remaining onsite wells are located along the perimeter of the former Whirlpool manufacturing facility, within the source area, or south of the source area which includes wells immediately adjacent to the Whirlpool manufacturing building. Tabulated VOC concentrations measured in onsite wells during the fourth quarter event are presented in Table 6.

VOCs were detected above the RADD RALs in 29 of the 35 groundwater samples collected from onsite wells. Parameters exceeding RALs include: TCE in all onsite wells (except for ITMW-14, IW-80, MW-34R, MW-83, MW-84, MW-88 and MW-90), bromomethane in four wells, 1,1-DCA in two wells, 1,1-dichloroethene (1,1-DCE) in five wells, cis-1,2-dichloroethene (cis-1,2-DCE) in eight wells, methylene chloride in two wells, 1,1,2,2-tetrachloroethane (1,1,2,2-TCA) in nine wells, tetrachloroethene (PCE) in five wells, 1,1,1-trichloroethane (1,1,1-TCA) in one well, 1,1,2-trichloroethane (1,1,2-TCA) in one well and vinyl chloride (VC) in six wells.

During the 2016 second quarter event, the maximum onsite TCE concentration measured was 64,900 µg/L at MW-86. MW-86 is located in the onsite linear drainage feature which is the source area. The second quarter 2016 concentration of TCE at MW-86 is approximately 88% lower than the highest detected concentration of 533,000 µg/L in May of 2014. The TCE concentration has varied since 2014 due to ISCO efforts within this area. These results further document the successful ISCO remediation events performed at the Site as discussed and documented in prior reports such as the Two Year Technical Review Report completed by Ramboll Environ in January 2016.

The concentration of the daughter products (cis-1,2-DCE and 1,1-DCE) are also highest in the wells in the source area and immediately surrounding the source area. The highest concentration of VC continues to be detected at MW-38.

Figures 3 and 4 depict trends in TCE concentration at select onsite wells. Figure 3 depicts TCE concentrations at ITMW-17, ITMW-19 and MW-25 over time on a logarithmic scale. The linear trend for TCE concentration is generally decreasing to stableat these three wells. Figure 4 depicts TCE concentrations at the northern onsite wells (MW-33R, MW-34R and MW-35R along Ingersoll Avenue) over time on a logarithmic scale. The concentration results for MW-34R and MW-35R exhibit decreasing to stable linear trends. The May 2016 TCE concentration from MW-34R (2.5 µg/L) continues to remain below the RAL along with the third and fourth quarter 2015 and first quarter 2016 results of 3.5, 4.5 and 2.6 µg/L, respectively. MW-33R has shown fluctuation in TCE concentrations over time; however, the current TCE result of 776 µg/L is less than the maximum detected concentration of 1,700 µg/L, measured in September of 2007 (MW-33R was abandoned in April 2016 due to the current Ingersoll Avenue road expansion project).

Northeast Corner Wells

As discussed in the Northeast Corner Investigation Report (dated December 8, 2014), wells were installed at the northeast corner of the Whirlpool property and on the Boys and Girls Club property. These wells (MW-87 through MW-91, MW-96 through MW-99 and MW-183 and MW-184) were installed to identify and delineate TCE impacts at or near the northeast corner of the Site. Analytical results from these wells are included in Table 6. As stated in the Response to ADEQ Correspondence dated August 3, 2015, regarding the First Quarter 2015 Progress Report, these wells were sampled for VOCs and MNA parameters during the Second Quarter event and will continue to be sampled for these parameters during subsequent quarters subject to any future ADEQ-approved changes.

During this event, samples were collected from these wells as shown on Figure 2A. MW-88 and MW-90 are located north of the former manufacturing building northeast corner. VOCs were non-detect at MW-90. The TCE result at MW-88 is 0.25J µg/L. MW-89 contained TCE at a concentration of 14 µg/L which is comparable with historical concentrations. The second quarter TCE concentration at MW-87 (839 µg/L) is higher than the first quarter monitoring event result (757 µg/L). The TCE concentration at MW-91 (459 µg/L) is the same result that was identified during the first quarter 2016 monitoring event. TCE concentrations in MW-96 through MW-99 on the Boys and Girls Club property are below detection limits. Wells MW-183 and MW-184 were installed in late September 2015. The TCE concentrations at MW-183 and MW-184 during the Second Quarter event were 2.8 µg/L and non-detect respectively. The result of 2.8 µg/L at MW-183 was consistent with the first quarter 2016 result of 2.7 µg/L.

3.3.2 Monitored Natural Attenuation Results

In accordance with the RADD, 55 monitoring wells are noted as plume boundary, onsite, or offsite wells which are monitored for natural attenuation parameters. During the Second Quarter event, 28 additional wells (not listed in the RADD) were monitored for laboratory and field natural attenuation parameters and VOCs. An additional twelve wells were sampled for VOCs and field natural attenuation parameters. Tabulated results are presented in Table 6.

This section presents the natural attenuation data collected from the Site during the 2016 Second Quarter event.

The USEPA documents "Technical Protocol for Evaluating Natural Attenuation of Chlorinated Solvents in Groundwater" (USEPA, 1998) and "An Approach for Evaluating the Progress of Natural Attenuation in Groundwater" (USEPA, 2011) provides a framework for presenting the lines of evidence that natural attenuation of chlorinated solvents is occurring. The three recognized lines of evidence include:

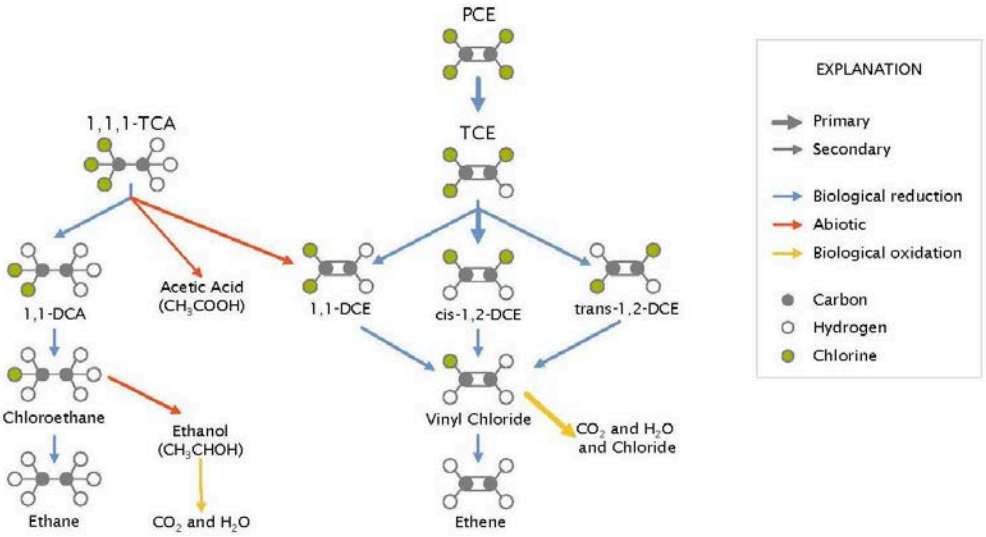
- Historical groundwater and/or soil chemistry data that clearly demonstrate a trend of decreasing contaminant mass and/or concentration over time at appropriate monitoring points (USEPA, 1998);
- Hydrogeologic and geochemical data that can be used to establish indirectly the type(s) of natural attenuation processes occurring at the site and the rate at which the processes will reduce contaminant concentrations to the cleanup goal (USEPA, 1998); and
- Data from field or microcosm studies which directly demonstrate the occurrence of a specific natural attenuation process at the site and its capacity to degrade the contaminants of concern (USEPA, 1998).

The MNA assessment evaluates predominant electron acceptors, the variability of these electron acceptors, major nutrients, general groundwater quality, key microbial population and enzyme activities and dissolved gasses. The assessment uses this data to determine the types of organisms that will be able to effectively flourish in the aquifer, how the geochemistry and chemistry of the aquifer impacts MNA processes, how the indigenous microbial population is being supported, the availability of microbial populations and the presence of reductive dechlorination occurring in the aquifer.

3.3.2.1 Chemical Lines of Evidence

The occurrence and progress of natural attention in reducing COC concentrations is provided by evaluating the presence and effectiveness of the transformation pathways for chlorinated ethenes. Chlorinated ethenes are degraded by both biological and abiotic (non-biological) mechanisms. The graphic below shows the biological (anaerobic) and abiotic transformation pathways for chlorinated ethenes. This graphic does not include other chemically induced aerobic (e.g. ISCO) and anaerobic (e.g. zero valent iron) pathways that can promote degradation of chlorinated compounds.

Abiotic and Biotic Pathways for Chlorinated Ethenes and Ethane



Source: Vogel et al., 1987.

Tables 4 and 6 present a summary of field parameters and analytical results for VOCs in groundwater, respectively. These data provide lines of evidence that natural attenuation of TCE is continuing to occur via biological mechanisms in both onsite and offsite groundwater. Groundwater sample results continue to show elevated levels of cis-1,2-DCE in Site monitoring wells. More than 60% of the wells showed detectable levels of cis-1,2-DCE while approximately 25% of the wells displayed the presence of VC. In addition, 27 wells showed detectable levels of ethene, indicating that complete reductive dechlorination is occurring at multiple locations of the northern and southern plumes. Table 6 also includes the laboratory MNA analytical results and the microbial data.

Sampling MNA parameters at locations where TCE is below 5 µg/L does not provide valuable data when evaluating MNA processes. When TCE concentrations are below 5 µg/L, the remedial action level [Maximum Contaminant Level (MCL)] has already been achieved. Given those very low level concentrations further significant reduction in contaminants cannot be expected within short timeframes. Also in areas where VOC concentrations are at very low levels, one is unlikely to be able to observe microbial populations, genes and other indicator parameters that reflect biodegradation of VOCs.

3.3.2.2 Geochemical Lines of Evidence

The occurrence and progress of natural attenuation in reducing COC concentrations is provided by evaluating geochemical parameters along with the results of conventional chemical and microbial analyses. The detection of cis-1,2-DCE in groundwater samples from this Site is evidence that conditions likely are favorable for active reductive dechlorination processes. Key parameters used to assess the progress of reductive dechlorination include: temperature, concentration or presence of electron acceptors (DO, nitrate, iron, manganese and sulfate),

presence and amount of nutrients (e.g. concentrations of nitrogen and phosphorus), bioavailable carbon source to sustain microbial population, concentrations of COCs and pH.

Tables 4 and 6 present the groundwater field parameters and MNA analytical and microbial results for the second quarter event. A summary of the key items on these tables are discussed below:

- The groundwater during this quarter was generally considered to be under bulk anaerobic conditions, with 54 of the wells showing DO concentrations less than 1 mg/L. In addition, 17 wells displayed microaerophilic conditions with DO less than 2.0 mg/L. DO levels were relatively low in both the northern and southern plumes. Elevated DO levels were observed in some areas that had been exposed to ISCO injections, similar to previous sampling rounds. Following the ISCO injections in both the northern and southern plume, there was an increase in DO in the wells impacted by the injections. Within less than eight months after the ISCO injections, DO levels returned to background concentrations in both plumes, which reflects the potential for further MNA after ISCO injections.
- The ORP of the groundwater samples ranged from a low of -191.6.1 millivolts (mV) in MW-173 to a high of 635.2 mV in IW-72 (some purged groundwater exhibited a light purple color presumably due to ISCO injections in this area). Similar to previous quarters, IW-72 continues to display high ORP levels. In general, the ORP levels were less than 500 mV in most of the Site monitoring wells, which indicate that the groundwater is under manganese to sulfate reducing conditions.
- The pH of the groundwater ranged from a low of 4.36 in MW-24 to a high of 12.72 in MW-190. In general, pH levels are in the range of 5 to 7; however, the pH is affected by ISCO injections.
- The alkalinity of the groundwater is relatively low with many of the groundwater samples showing total or bicarbonate alkalinity concentrations less than 100 mg/L. However, this quarter, 22 wells showed total alkalinity equal to or greater than 100 mg/L, which is similar to the previous quarters. The relatively low alkalinity concentrations in some parts of the plume indicate that the groundwater does not have significant natural buffering capacity in these areas. Similar to pH results, the alkalinity also increased in the northern wells impacted by the ISCO injection. Source area wells have not shown a significant change in alkalinity.
- The temperature of the groundwater ranged from about 17.07°C to 26.87°C, with the majority of the temperatures around 19-23°C, which is a range that would support microbial growth in groundwater.
- The major competing electron acceptors nitrate, manganese, iron and sulfate were evaluated in Site groundwater samples (Table 6). Nitrate levels were generally present at less than 1 mg/L in most of the monitoring wells. Both MW-89 and ITMW-6 showed elevated levels of nitrate at 74.9 mg/L and 23.8 mg/L, respectively which is consistent with the previous quarterly sampling events. Manganese concentrations ranged from non-detect at the method detection limit of 0.005 mg/L in several onsite wells to 6.3 mg/L in MW-41R. The majority of the wells showed manganese concentrations less than 1

mg/L. Total iron was generally present in groundwater samples at 10 mg/L or less, with the exception of MW-36R, MW-40R, MW-41R, MW-58R, MW-61R and TMW-11. The elevated total iron concentration observed in MW-61R (22 mg/L) was due to the in situ chemical reduction injections in the area of this well. The total iron results are consistent with the low levels of ferrous iron measured in groundwater (<4 mg/L). MW-34R, MW-39R, MW-40R, MW-41R, MW-58R, MW-61R, MW-62R and MW-67R showed total iron concentrations greater than 10 mg/L and ferrous iron concentrations at 3.0 mg/L or higher, indicating iron reducing conditions are present in the area around these wells. Although elevated levels of iron were observed in the aforementioned wells, it does not appear to be significantly inhibiting reductive dechlorination, as demonstrated by the presence of cis-1,2-DCE and VC in the groundwater. Sulfate concentrations were generally less than 1,000 mg/L with the exception of MW-35R, MW-65, MW-86, IW-77, MW-36R, MW-24, MW-83, MW-84, MW-85, ITMW-18 and ITMW-19. MW-35R displayed one of the highest sulfate concentrations in groundwater at 6,380 mg/L and likewise also showed elevated levels of persulfate at 3,500 mg/L. The wells that displayed significantly higher concentrations of sulfate were likely impacted by the ISCO injections.

- The dissolved hydrogen concentrations ranged from 0.76 nanomolar (nM) in MW-185 to 17,000 nM in MW-36R. Several wells displayed dissolved hydrogen greater than 1,000 nM and the majority of these wells, including MW-36R also showed elevated persulfate concentrations, which likely impacted the dissolved hydrogen concentration measurement in groundwater. Most of the wells displayed dissolved hydrogen concentrations in a range of 1.2 to 10 nM, which indicates that the majority of the plume is under sulfate reducing to methanogenic conditions.
- Dissolved gasses methane, ethane and ethene were present in low levels at the Site. Ethene levels remained similar to first quarter 2016, with a slightly elevated ethene level observed in MW-58R. The ethene levels in MW-58R corresponded to the presence of dehalococcoides (DHC) in this well, which is similar to the previous quarters.
- TOC levels ranged from less than 1 mg/L to a high of 42.6 mg/L in TMW-11, which was impacted by the ISCR amendments. Similar to the previous quarters, more than 80% of the groundwater samples displayed TOC levels less than 2 mg/L. Methane, ethane and ethene were detected at low concentrations or were non-detect in groundwater samples throughout the Site (Table 6). These results are likely due to low levels of TOC present in the groundwater, which may be inhibiting bacterial growth.
- Major nutrients such as ammonia and phosphate, were evaluated in groundwater and the results in Table 6 indicate that the groundwater contains non-detectable levels of ammonia (< 0.10 mg/L), with the exception of 26 wells which displayed ammonia levels greater than 0.11 mg/L and six wells showed ammonia levels equal to or greater than 1 mg/L. The highest ammonia level was observed in TMW-11 with a concentration of 6.6 mg/L. This well was impacted by the ISCR injection and because the amendment injected contains zero-valent iron, it is not surprising to see elevated ammonia levels in this well. Phosphate concentrations ranged from non-detect (< 0.03 mg/L) to a high of 2.3 mg/L in MW-65. Most wells displayed phosphate levels between 0.05 and 1 mg/L. Average nutrient levels, including ammonia, nitrate, nitrite and total phosphate have

remained relatively consistent during the quarterly sampling events, unless the wells were directly impacted by ISCO or ISCR.

- Similar to the previous quarterly sampling events, volatile fatty acids (lactic acid, propionic acid, butyric acid, pyruvic acid and acetic acid), 2-chloroethanol and acetylene showed non-detect levels in the groundwater and sulfide was only detected in one well, MW-50R (14 µg/L) in this sampling event.

3.3.2.3 Microbial Lines of Evidence

Table 6 provides the microbial results for the groundwater samples which were evaluated using standard groundwater analysis protocols. Table 6 includes the results for the genus DHC, the functional genes, tceA reductase (tceA), BAV1 VC reductase (BVC) and VC reductase (VCR). The second quarter 2016 microbial results are presented in Appendix C. Similar to the previous quarterly sampling results, the DHC microbial population was detected at elevated levels in MW-38 (3,580 cells/mL); a location that is relatively close to the source area. Likewise, the BVC gene was also detected at elevated levels (623 cells/mL) in MW-38, which indicates the potential for complete reductive dechlorination in this area. In addition to MW-38, IW-74 and IW-73 showed elevated levels of DHC (547 and 724 cells/mL, respectively). The following twelve wells displayed DHC concentrations greater than 30 cells/mL: MW-38, MW-88, MW-90, ITMW-16, MW-40R, MW-41R, MW-55R, MW-61R, MW-63R, MW-67R, IW-73 and IW-74. Although the level of DHC is relatively low in some of the aforementioned wells, the presence of these microbes indicates that the environmental conditions could be adjusted to significantly increase their numbers to support active reductive dechlorination.

In general, the average DHC population in the northern and southern plumes is lower in the ISCO impacted wells, which is to be expected given the oxidative conditions which inhibit the growth and sustainability of DHC. However, various field studies have shown that DHC populations can rebound to native levels within a relatively short time period (Sutton et al., 2011).

The chemical, geochemical and microbial data from the second quarter 2016 event are similar to the quarterly monitoring events in 2014 and 2015. The VOC results demonstrate that reductive dechlorination is occurring in multiple locations within the plume.

The higher levels of TOC and ethene have been consistently observed in MW-38, which indicate that there is bioavailable organic carbon in this area that is supporting the indigenous microbial population of DHC and contributing to complete reductive dechlorination of VOCs in groundwater. The lower rates of reductive dechlorination observed in the plume may be due to the lower levels of TOC observed in various locations throughout the plume and the elevated DO levels.

3.4 Data Quality Assessment

All field and analytical data were reviewed by Ramboll Environ. Validation findings are summarized below. Detailed validation reports are included in Appendix C.

3.4.1 Field Data

Field data were collected and validated according to the RADD, Work Plan and associated SOPs and USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Review (August, 2014). The field data and documentation were evaluated against the following criteria, as appropriate:

Samples were collected at the specified locations identified in the RADD plus five wells sampled on the northeast corner of the Whirlpool property (MW-87 through MW-91), six wells sampled on the Boys and Girls Club property (MW-96 through MW-99, MW-183 and MW-184), nine wells sampled for ISCO monitoring (MW-23, MW-24, MW-81, MW-82, MW-92 through MW-95 and IW-101, IW-115 and MW-172), two temporary wells sampled for in-situ chemical reduction (TMW-10 and TMW-11) and twenty-five additional wells sampled to support the evaluation of the source area, plume boundary and shallow groundwater.

- Field instrumentation calibration and quality assurance/quality control (QA/QC) checks on equipment were conducted on a daily basis, prior to field work; and
- Sample documentation protocol and chain-of-custody protocols were followed per Ramboll Environ Field Procedures.

3.4.2 Laboratory Analytical Data

All VOC (SW846 5030B/8260B) analytical results for the 76 RADD plume boundary, onsite and offsite wells, in addition to wells noted in Section 3.4.1, received data validation by a Ramboll Environ Project Chemist. During the data validation process, data validation qualifiers were assigned to the results per USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Review (August, 2014), as necessary, to indicate potential limitation on use of the data. In addition, data qualifier codes were added to the results to indicate the reason(s) for qualification and the associated bias direction, if discernible.

The following sections provide a summary of the data validation results.

General Usability Assessment

The laboratory data packages for VOC analysis received from Pace Analytical Services were paginated, complete and overall of good quality. The data packages submitted contained modified level II data packages for data validation.

The data quality for VOCs was generally acceptable. A number of analytes were qualified as non-detect due to method, equipment and trip blank contamination. This contamination generally originates from carry over on the instrument, from common laboratory contaminants used in the laboratory and from cross contamination during shipping and storage of samples.

The overall quality of analytical data is inferred from the quantitative and qualitative data quality indicators of reporting limits, accuracy, precision, completeness, representativeness and

comparability. A general overall assessment of each of the data quality assurance objectives is provided below:

- **Reporting Limits.** The minimum reporting limits required were attained on undiluted samples with the exception of 1,3-dichloropropene and 1,1,2,2-tetrachloroethene. The laboratory instrument used for USEPA Method 8260B cannot be calibrated to detect 1,3-dichloropropene at a RAL of 0.41 µg/L or 1,1,2,2-tetrachloroethene at a RAL of 0.066 µg/L as prescribed by the RADD. The method detection limit (MDL) for 1,3-dichloropropene at 0.14 µg/L was below the RAL whereas the MDL for 1,1,2,2-tetrachloroethene was 0.15 µg/L which is above the RAL listed in the RADD. ADEQ was informed of the limitations of the laboratory instrument in March 2014.

  Elevated target analyte concentrations necessitated dilutions for several samples. In such instances, the reviewer selected the result for each target analyte, corresponding to the analysis run with the least dilution. All other analytes were reported from the undiluted analysis if applicable. Results below the reporting limit (RL) were flagged by the laboratory if above the MDL. To reflect the uncertainty associated with values reported between the MDL and RL, these results were qualified as estimated ("J").

- **Precision.** The MS/MSD relative percent difference (RPD) results for VOCs and the field duplicate RPD VOC results satisfied applicable precision criteria for the majority of analytes with the following exceptions; four out of the five field samples which were selected for MS/MSD analysis MW-55R-201605, ITMW-20-201605, MW-28-201605 and MW-90-201605 with MS/MSD RPDs reported slightly outside of laboratory criteria. For sample MW-55R-201601 Dibromochloromethane had a reported RPD of 14% and exceeded the laboratory control criteria of 14%. For sample ITMW-20-201601 two analytes (Styrene and Trichloroethene) had MS/MSD RPDs reported slightly above the laboratory control criteria. In addition MW-28-201601 had two analytes (1,1-DCA and chloromethane) with MS/MSD RPDs reported above laboratory control criteria and MW-90201605, the analyte acetone had an MS/MSD RPD reported above laboratory control criteria. While the slightly high MS/MSD RPDs may indicate possible poor precision, all MS/MSD recoveries for these analytes were within laboratory control criteria. Therefore, this non-conformance does not affect the usability of the data and qualification of data was not required. All ten field duplicate results had calculated RPDs less than 30% for all aqueous samples, indicating adequate and reproducible field and laboratory collection and analytical techniques with the exception of sample MW-92-201605 and its associated duplicate DUP-08-201605. Duplicate RPDs for one analyte (chloromethane) was reported above 30% indicating poor replicate precision. As the LCS RPD was reported within laboratory control criteria, this non-conformance does not affect the usability of the data and qualification of data was not required.

- **Accuracy.** Accuracy is a measure of bias in a measurement system. The closer the value of the measurement agrees with the true value, the more accurate the measurement. This was expressed as the percent recovery of LCSs, MS/MSDs and surrogates. Surrogate spike recoveries, MS/MSD results and LCS results for constituents of concern satisfied the applicable evaluation criteria for accuracy, which indicates that overall accuracy with respect to the analytical system and to the site

specific matrix can be considered acceptable. Several recoveries were outside of acceptable criteria and qualification of data was required for twelve sample results. In addition, one MS/MSD recovery for styrene was below 10% indicating that the instrument was not able to sufficiently determine the presence of the analyte in the sample matrix. Therefore, the non-detect results of styrene in sample ITMW-6-201605 was rejected and qualified as "R" indicating that the data cannot be used for any purpose.

- **Completeness.** Completeness is a measure of the number of valid measurements obtained in relation to the total number of measurements planned. Completeness is expressed as the percentage of valid or usable measurements to planned measurements. One data points out of 5202 data points were rejected during the validation process. As such, the completeness for the 2016 second quarter event is 99.9%.
- **Representativeness.** Representativeness is a qualitative parameter which expresses the degree to which sample data accurately and precisely represents a characteristic of a population, parameter variations at a sampling point, or an environmental condition. The agreement between the field duplicate results was used to assess representativeness. As discussed above one sample duplicate result had RPDs which indicated possible poor precision due to sample collection inconsistencies, however for all other sample and duplicate pairs, the general agreement between the field duplicate results is considered to indicate that the samples collected are adequately representative of the medium sampled.
- **Comparability.** In essence, comparability was maintained by consistency in sampling conditions, selection of sampling procedures, sample preservation methods, analytical methods and data reporting units.

4 Plume Stability

This section includes discussion of trends for individual wells, trends for groups of wells, plume boundaries and concentration versus time plots. The discussion and assessment of the plume is based upon a macro-analysis of the entire plume versus a single well analysis to categorize the plume stability. Individual wells will inherently exhibit variability and fluctuations that will influence plume boundaries in any given quarter. The macro-analysis of the entire data set minimizes the over weighting of any particular well or data set from a well. Monitoring wells installed after the 2013 RADD was issued by ADEQ are only included in this analysis if they have been sampled a sufficient number of times to establish temporal trends (statistical trend analysis typically requires data from at least four sampling events).

Table 7 presents a historical summary of TCE and degradation products, cis-1,2-DCE and VC, concentrations in groundwater samples. These values are used for the analysis of trends described in the remainder of this section.

4.1 Lines of Evidence

Several analytical tools or "lines of evidence" were used to evaluate plume stability conditions including:

- **Statistical Methods**. Mann-Kendall nonparametric test (Gilbert, 1987; USEPA, 2000) to calculate the temporal trend in individual well analyte concentrations over time.
- **Isoconcentration Maps.** Qualitative method to evaluate temporal trends by comparing representations of plume concentration and extent for certain periods over the duration of monitoring.
- **Time vs. Concentration Plots.** Qualitative method to evaluate temporal trends in constituent concentration for individual wells and for representative concentration of overall plume (mean). The plots also include exponential regression lines to aid the analysis of temporal trends.

4.1.1 Statistical Analysis of Temporal Trends

The Mann-Kendall test (Gilbert, 1987) is a non-parametric test for linear trend, based on the idea that a lack of trend would be represented by a time series plot fluctuating randomly about a constant mean level, with no visually apparent upward or downward pattern. Because Mann-Kendall is a non-parametric test, it is not dependent upon the magnitude of data, the distribution of the data (does not have to have a normal distribution), missing data from a particular sampling event, or irregularly spaced monitoring events. Mann-Kendall assesses whether a time-ordered data set exhibits an increasing or decreasing trend, at a predetermined level of significance.

The Mann-Kendall statistic is computed by looking at all possible pairs of measurements in the data set and scoring each pair as follows:

- An earlier value lower in magnitude than a later one is assigned a value of 1;
- An earlier value higher in magnitude than a later sample is assigned a value of –1; and
- Two identical values are assigned 0.

The scores from all of the pairs are added together to get the Mann-Kendall statistic (S), a positive value of S indicates that a majority of the differences between earlier and later measurements are positive, which suggests an increasing trend over time. Conversely, a negative value for S implies that a majority of the differences between earlier and later values are negative, indicating a decreasing trend. A value near zero indicates a roughly equal number of positive and negative results. This indicates the values have randomly fluctuated around a constant mean with no apparent trend. If the Mann-Kendall test indicates that there is not a statistically significant trend a second test, coefficient of variation (COV), is performed to determine if the trend is stable (COV is less than 1, little variation above and below the mean value) or if no trend exists (COV is greater than 1, high variation above and below the mean value).

The applicable outcomes of the temporal trend analysis are as follows:

- **Increasing**. Statistically significant increasing trend for concentrations (>90% confidence);
- **Stable.** No statistically significant trend for concentrations along with low variability for results (coefficient of variance <1);
- **No Trend**. No statistically significant trend for concentrations along with high variability for results (coefficient of variance >1);
- **Decreasing**. Statistically significant decreasing trend for concentrations (>90% confidence);
- **<PQL (Practical Quantitation Limit).** All sample results have a “J” qualifier (estimated result greater than the method detection limit but less than the reporting limit) or a mixture of non-detects and results with “J” qualifiers; and
- **Not Detected (ND).** Constituent has not been detected at the well during the time period analyzed.

The trend analysis performed for groundwater concentrations from 2009 (when installation of the last of the current wells used for monitoring in accordance with the RADD was complete) through the second quarter of 2016 are summarized in Tables 8 and 9. MW-42B and MW-43 were damaged in 2009 and permanently abandoned in 2014; therefore no statistical evaluation was performed for these wells. The following is the list of wells in each category (this list is only presented for evaluation of plume stability):

- **Northern Plume Wells (43 wells)**. MW-23, MW-24, MW-27, MW-28, MW-31/31R, MW-32/32R, MW-33/33R, MW-34/34R, MW-35R, MW-36/36R, MW-39/39R, MW-40/40R, MW-41/41R, MW-46R, MW-50, MW-55/55R, MW-56/56R, MW-57/57R, MW-58/58R,

MW-60, MW-61, MW-62/62R, MW-63/63R, MW-65, MW-66, MW-67/67R, MW-68, RW-69, MW-70, MW-71, IW-72, IW-73, IW-74, IW-75, IW-76, IW-77, IW-78, IW-79, IW-80, MW-81, MW-82, MW-83 and MW-84.

- **Northeast Corner Wells (9 wells)**. MW-87, MW-88, MW-89, MW-90, MW-91, MW-96, MW-97, MW-98 and MW-99.
- **Southern Plume Wells (36 wells)**. ITMW-1, ITMW-2, ITMW-3, ITMW-4, ITMW-5, ITMW-6, ITMW-7, ITMW-9, ITMW-10, ITMW-11, ITMW-12, ITMW-13, ITMW-14, ITMW-15, ITMW-16, ITMW-17, ITMW-18, ITMW-19, ITMW-20, ITMW-21, MW-22, MW-23, MW-24, MW-25, MW-26, MW-29, MW-30, MW-37, MW 38, MW-85, MW-86, MW-92, MW-93, MW-94, MW-95 and MW-172.
- **Source Area Wells (16 wells)**. ITMW-11, ITMW-12, ITMW-15, ITMW-17, ITMW-18, ITMW-19, MW-25, MW-37, MW-38, MW-85, MW-86, MW-92, MW-93, MW-94, MW-95 and MW-172.

Contaminant concentration trends as established during the first quarter event are summarized below:

- **Northern Plume Wells (43 wells):** The Mann-Kendall trend analysis utilizes data from all wells associated with the second quarter 2016 groundwater monitoring event for the northern plume (Table 8). As described in more detail below, our determination that a majority of the wells exhibit little or no TCE or a decreasing or stable TCE concentration trend is based on the fact that 86% (37 of 43 wells) of these wells exhibit either little or no TCE or a decreasing or stable TCE concentration trend.

  The trend analysis for the 43 wells associated with monitoring the northern plume indicates the following:

  - Seven wells exhibit a stable trend for TCE concentrations.
  - Nineteen wells exhibit a decreasing trend for TCE concentrations.
  - Eight wells exhibit no trend regarding TCE concentrations according to the statistical test. TCE concentrations in seven out of eight of these wells consisting of MW-27, MW-31/31R, MW-39/39R, MW-67, MW-68, IW-72 and IW-75 have been non-detect or have been detected but at less than 1.8 µg/L since October 2012. MW-82 exhibits no trend and TCE concentrations have been approximately 5 µg/L during the last year of monitoring.
  - Four wells exhibit TCE concentrations below detection limits or below reporting limits.
  - Five wells exhibit an increasing trend for TCE concentrations.
- TCE concentrations in 11 of the 43 northern plume wells (26%) have been non-detect or less than 1.8 µg/L since October 2012 and 26 of the 43 wells (60%) have exhibited decreasing or stable trends; therefore, 37 of the 43 northern plume wells (86%) exhibit either little or no TCE or a decreasing or stable TCE concentration trend. We believe that this supports our plume stability conclusions.

As noted, TCE concentration trends are increasing in five of 43 (12%) of the wells (MW-36R, MW-56R, MW-57R, MW-61R and MW-66). Further, of the five wells located in the northern plume with increasing TCE concentration trends:

- Two wells (MW-61R and MW-66) had concentrations during the 2016 first quarter that were within historical ranges of detected values. The TCE concentration of 5.3 µg/L at MW-61R represents a slight increase in the TCE concentration compared to the first quarter of 2016 (3.9 µg/L vs. 5.3 µg/L), but the current concentration still represents a substantial decrease in TCE concentrations over the last year as a result of ISCR. Further monitoring is necessary to confirm continued downward trends in TCE concentrations as a result of ISCR (as discussed in the Groundwater Monitoring Plan).

  TCE concentrations at MW-66 during the previous year have ranged from 0.53 µg/L to 3.3 µg/L µg/L and the current concentration of 2.6 µg/L which is within the range of previous concentrations. The maximum concentration detected in MW-66 is 3.5 µg/L in March 2014. MW-66 was abandoned in early August 2016 due to the Jenny Lind Road construction project and a new well was installed west of Jenny Lind Road (approximately 100 feet west of the former location of MW-66). MW-67 and MW-193 were also abandoned due to the road construction project and new wells were installed west of Jenny Lind Road.

- The TCE concentration at MW-36R of 1.7 µg/L is the first non-estimated detection since November 2010 but below historical detection limits and only slightly above current detection limits.

- The TCE concentration at MW-56R is 734 µg/L is a historical maximum concentration for this well; although, other increases in TCE concentrations are noted in this well during spring sampling events (e.g. TCE concentrations during previous select Spring monitoring events were 230 µg/L in May 2010, 618 µg/L in March 2014, and 495 µg/L in April 2015). This well is scheduled to be monitored again in October 2016 in accordance with the revised Groundwater Monitoring Plan.

- The May 2016 TCE concentration at MW-57R of 425 µg/L is a historical high concentration; although TCE concentrations at MW-57R have remained relatively stable during the last year with previous quarterly TCE concentrations of 409 µg/L, 400 µg/L and 422 µg/L in July 2015, October 2015 and January 2016, respectively.

- **Northeast Corner Wells (nine wells):** The five wells (MW-87 through MW-91) located on Whirlpool property in the area of the northeast corner plume have been sampled eight times between June 2014 and May 2016 and four wells (MW-96 through MW-99) located on Boys & Girls Club property further to the northeast have been sampled seven times between October 2014 and May 2016. This allows for statistical analysis of temporal trends over an approximate two year period but does not allow for the interpretation of long-term temporal trends in these wells. Overall TCE concentrations trends at MW-88 and MW-90 are continuously non-detect to low J-flagged values, at

MW-89 the current quarter concentration of 14.0 µg/L is less than the high value of 19.5 µg/L in June 2014.

The overall TCE concentration trends are increasing in MW-87 and MW-91 with concentrations ranging from 564 µg/L to 839 µg/L and 234 µg/L to 530 µg/L, respectively. During the last five quarterly events, TCE concentrations in MW-87 have been 758 µg/L, 758 µg/L, 708 µg/L, 757 µg/L (duplicate sample result of 781 µg/L) and 839 µg/L; therefore, these results suggest the TCE concentrations in MW-87 appear to be stable during the last year with a possible increase noted during the latest monitoring event. During the last five quarterly events, TCE concentrations in MW-91 have been 438 µg/L, 411 µg/L, 405 µg/L (duplicate sample result of 442 µg/L), 413 µg/L (duplicate sample result of 422 µg/L) and 530 µg/L (duplicate sample result of 459 µg/L); therefore, these results suggest the TCE concentrations in MW-91 appear to be fairly stable in the time period of April 2015 through May 2016 (noting an increase during the latest monitoring event). MW-87 and MW-91 are both scheduled to be monitored during the October 2016 groundwater monitoring event in accordance with the proposed, revised Groundwater Monitoring Plan.

TCE concentrations in MW-96 through MW-99 and MW-184 on the Boys & Girls Club property continue to be below detection limits (i.e. less than 0.17 µg/L) (except for estimated TCE concentrations of 0.21 µg/L during the January 2016 event at MW-99 and 0.59 µg/L during the January 2015 event at MW-96). TCE was detected in MW-183 at 2.8 µg/L during this monitoring event which compares to the 2.0 µg/L and 2.7 µg/L TCE concentrations detected in October 2015 and January 2016, respectively.

- **Southern Plume Wells (36 wells):** As described in more detail below, our determination that a majority of the wells exhibit little or no TCE or a decreasing or stable TCE concentration trend is based on the fact that 33 of 36 (92%) of the southern wells exhibit either little or no TCE or a decreasing or stable TCE concentration trend. The trend analysis for the 36 wells associated with monitoring the southern plume indicates the following:
    - Eight wells exhibit a stable trend for TCE concentrations.
    - Nineteen wells exhibit a decreasing trend for TCE concentrations.
    - Three wells exhibit no trend regarding TCE concentrations (TCE concentrations at two of these wells, consisting of ITMW-20 and MW-26, have been non-detect or less than 5 µg/L since October 2011). TCE concentrations at MW-85 (the other well with no trend) exhibit no trend according to the statistical test and the concentrations have varied by two orders of magnitude during the year of monitoring. The TCE concentration at MW-85 decreased from 12,000 µg/L in October 2015 to 6,980 µg/L in January 2016 and now has further decreased to 678 µg/L in May 2016. These fluctuations in concentrations preclude development of a mathematical trend using Mann-Kendall trend analysis.
    - Three wells exhibit TCE concentrations below PQLs.

  - Three wells (ITMW-6 and ITMW-10 located south of the former manufacturing building and MW-38 located immediately north of Area 1) exhibit an increasing trend for TCE concentrations.

  As noted, TCE concentration trends are statistically increasing in three of the 36 (8%) southern plume wells (ITMW-6, ITMW-10 and MW-38) and of these wells the following observations can be made:

  - MW-38 is a source area well and is discussed further below.
  - ITMW-6 TCE concentrations have been primarily detected at less than 5 µg/L. TCE concentrations have ranged from 2.7 to 4.7 µg/L over the time period of October 2013 through May 2016. The current TCE concentration is 4.4 µg/L which is within the range of concentrations reported over the last several years.
  - ITMW-10 will continue to be monitored regarding the increasing trend of TCE concentrations near the south central boundary of the building; concentrations for cis-1,2-DCE and VC at ITMW-10 showed decreasing trends. The May 2016 TCE concentration of 743 µg/L (duplicate sample result of 673 µg/L) is slightly lower than the previous January 2016 concentration of 761 µg/L.

- **Source Area Wells (16 wells):** The source area wells showed predominantly decreasing or stable concentration trends for TCE (ten wells decreasing, four wells stable and one well with no trend) and for cis-1, 2-DCE (nine wells decreasing and six wells stable). Only one source area well, MW-38, has continued to demonstrate an increasing concentration trend for TCE and cis-1,2-DCE based upon the Mann-Kendall test, however TCE concentrations have been continuing to decrease at MW-38 since October 2014 and the current TCE concentration is 55% less than the October 2014 concentration. During the last year, the quarterly TCE concentrations in MW-38 have been 3,420 µg/L, 2,740 µg/L, 3,680 µg/L and 3,040 µg/L; therefore, these results suggest the TCE concentrations in MW-38 are beginning to stabilize.

4.1.2 Isoconcentration Maps

Figures 2A and 2B show isoconcentration lines at the northern, northeastern and southern plumes for the 2016 Second Quarter groundwater monitoring event. Figure 2A of this report shows TCE concentrations exceeding 5 µg/L on and near the northeast corner of the facility. The presence of TCE in this area does not necessarily represent an expansion of the plume beyond the bounds of its historical maximum extent.

The 2014 second quarter groundwater monitoring event was the first time that the TCE concentration at MW-61 significantly exceeded 5 µg/L, requiring the isoconcentration line to be extended to include MW-61. This trend continued during the 2015 fourth quarter event, with a TCE concentration of 13.3 µg/L reported at MW-61R. An ISCR pilot test commenced at MW-61R in October 2015 and the first quarter 2016 TCE concentration in MW-61R was 3.9 µg/L; therefore, the isoconcentration no longer extended past this well. The most recent concentration of 5.3 ug/L has caused the isoconcentration to slightly extend further than MW-61R. Concentrations will continue to be monitored in this area.

MW-193 was installed northeast (down-gradient) of MW-61R in September 2015 and TCE was not detected during the fourth quarter 2015, first quarter 2016, or second quarter 2016 sampling events. As noted above, MW-193 was abandoned in early August 2016 due to the Jenny Lind Road construction project, and a new well was installed west of Jenny Lind Road and immediately south of Brazil Avenue to continue monitoring the northeast portion of the north plume.

4.1.3 Concentration vs. Time Plots

The average (arithmetic mean) of the detected TCE, cis-1,2-DCE and VC concentrations were calculated for each of the 20 comprehensive groundwater monitoring events conducted at the Site beginning in 2009 and are summarized in Table 10. Average concentrations for all locations presented on Table 10 (combined northern and southern plume wells, northern plume wells, southern plume wells, source area wells and northeast corner wells) increased compared to the first quarter 2016 sampling event (1,252 µg/L versus 1,614 µg/L) but decreased compared to the fourth quarter 2015 event (1,818 µg/L).

Figures 5 through 9 show the average concentrations versus time for the combined northern and southern plume wells, the northern plume wells, the southern plume wells, the source area wells and the northeast corner plume wells, respectively. Decreases in average concentrations for TCE, cis-1,2-DCE and VC are noted over the monitoring period for the combined northern and southern plume wells, southern plume wells and source area wells. The average concentrations of TCE, cis-1,2-DCE and VC in the northern plume wells continue to decrease, but at a moderate rate compared to the remainder of the wells. The average TCE concentration trend in the northeast corner wells has continued to increase gradually over the approximate one year and 10 month time period since the wells were installed.

TCE and cis-1,2-DCE concentration versus time charts are also provided for pairs of wells located in the southern plume, source area and two located in the northern plume (Figures 10 and 11). As shown on Figure 10, although TCE concentrations continue to increase in ITMW-10 (primarily during the previous ten most recent sampling events) concentrations of cis-1,2-DCE in ITMW-10 and in nearby ITMW-9 have been decreasing. The concentration of TCE at ITMW-9 shows a decreasing to stable trend. Figure 11 shows concentration trends for ITMW-19 and MW-25 located in the source area; concentrations are generally decreasing with decreases of one to two orders of magnitude following the third ISCO injection event in the source area. Figure 12 shows TCE concentrations at MW-61/61R increasing above historical maximums but the October 2015, January 2016 and May 2016 results are comparable to historical low concentrations.

4.2 Summary of Plume Stability

The overall groundwater conditions at the Site exhibit decreasing to stable characteristics in a predominant number of wells based upon statistical analysis of temporal concentration trends, decreasing average TCE concentrations in the southern plume, decreasing to stable average TCE concentrations in the northern plume and an aerial extent for the north plume predominantly within the bounds of the historical maximum plume extent. Using the Mann-

Kendall statistic test, temporal trend increases in TCE concentrations observed in MW-61R and MW-66 are within historical ranges and continue to be reported at levels below or near the RAL (more recently in MW-61R). The boundaries of the south plume have been modified based upon the findings from the Property Boundary Investigation September 2014, data obtained from MW-182 (installed in late June 2015) and the data from the south sentinel wells (installed in late September 2015).

The site-wide groundwater conditions can be categorized as three separate plumes with distinct characteristics (i.e. the southern plume, the northern plume and northeastern plume).

The southern plume is characterized by:

- A relatively flat south, southeast potentiometric gradient with a southwestern gradient in the southern section of the plume;
- Source area (Area 1) TCE concentrations greater than 10,000 µg/L;
- An aerial extent of approximately 1,121,000 square feet (ft^2) (predominately located under the footprint of the Whirlpool building); and
- A decreasing trend in average TCE concentrations.

The northern plume is characterized by:

- A north-northeast potentiometric gradient that is flat in the south portion of the north plume but steepens to north-northeast;
- TCE concentrations generally between 100 and 800 µg/L;
- An aerial extent of approximately 463,000 ft^2 located north of the Whirlpool property (containing the manufacturing building) and extending to the residential area to the north and northeast; and
- A decreasing trend in average TCE concentrations.

The northeast plume is characterized by:

- An east, northeast potentiometric gradient.
- TCE concentrations generally between 5 and 850 µg/L.

An aerial extent of approximately 240,000 ft^2 located northeast of the Whirlpool building and extending to property owned by the Boys and Girls Club, but offsite groundwater TCE concentrations in monitoring wells are below the RALs.

5 ISCO Remedial Effectiveness

This section includes discussion of April and May 2016 TCE concentrations in groundwater as they relate to the effectiveness of the last ISCO injection event completed in Area 1, Area 2 and the supplemental neck area in September and October 2015. This event also complements the three 2014 ISCO injection events completed in Area 1, the supplemental neck area and Area 2 and Area 3. Further discussion of all injection events are found in the 2015 Two Year Technical Review Report (February 2016). In addition, further specific discussion of the 2015 injection event is discussed in the Fourth Quarter 2015 Progress Report dated January 2016 and further specific discussion of the three 2014 ISCO injection events are found in the quarterly progress reports completed in 2014 as well as the 2014 Remedial Action Effectiveness Report dated January 2015.

The percent reduction in TCE concentrations was calculated for individual wells and for groups of wells in areas where ISCO injections occurred. If a well had not been sampled in January 2016 then the most recent result available was used to calculate the sum of TCE concentrations for each area. The calculations for assessment of ISCO remedial effectiveness will be modified in future monitoring reports in accordance with the assessment of rebound presented in the revised Groundwater Monitoring Plan (see Section 5.1).

Table 11 presents a comparison of TCE concentrations in groundwater prior to the October 2014 ISCO event (September 2014 and October 2014) and the associated post injection monitoring results in Area 1. The most recent post injection monitoring results from May 2016 indicate overall TCE concentration decreases in thirteen monitoring wells ranging from 3% (MW-95) to nearly 100% (ITMW-18). Concentration increases relative to baseline conditions (September and October 2014 concentrations) include 2% at MW-92 and 126% at ITMW-11. The sum of TCE concentrations at the wells monitored in Area 1 decreased from a baseline of 944,213 µg/L in September and October 2014 to approximately 343,904 µg/L in May 2016 (~64% decrease).

MW-25, MW-85 and MW-86 are located near the former linear drainage feature where the highest concentrations of TCE in groundwater have historically been measured. Table 12 presents historic data from May 2014 (prior to the second injection event) for these wells through May 2016. While TCE concentrations increased at MW-25 since May 2014, the sum of TCE concentrations in all three wells has decreased from approximately 553,470 µg/L in May 2014 to approximately 118,578 µg/L in May 2016 (~79% decrease). Baseline TCE concentrations at MW-25 and MW-85 were much lower, less than 1% to less than 4% of the baseline concentration observed at MW-86. Therefore, it is likely that the ISCO treatment in the area has liberated TCE bound to the surrounding soil into the aqueous phase. As mentioned in the April 8, 2016, Response to ADEQ Correspondence on the Fourth Quarter 2015 Progress Report, fluctuations in TCE concentration in the groundwater can be viewed as a positive effect because contaminants become much more treatable in the aqueous phase.

Table 13 summarizes the TCE concentrations from wells in the supplemental neck area. The sum of TCE concentrations in the supplemental neck area decreased from approximately 1,296 µg/L prior to the second injection event in May 2014 to 48 µg/L in May 2016 (~96% decrease).

This represents a continued decrease relative to the 60 day post injection monitoring results in December 2015 when the sum of TCE concentrations was 225 µg/L. Similarly Table 14 summarizes the TCE concentrations from wells in Area 2 and Area 3. The sum of TCE concentrations in Area 2 and Area 3 decreased from approximately 3,865 µg/L prior to the second injection event in May 2014 to 546 µg/L in May 2016 (~86% reduction). This represents a further decrease in TCE concentrations in Area 2 and Area 3 since December 2015 when the sum was 669 µg/L. As of May 2016, the majority of the supplemental neck area and Area 2 and Area 3 wells saw greater than 85% decrease and no increasing TCE concentrations relative to baseline conditions were measured.

The effectiveness of ISCO injection events as compared to May 2016 monitoring results is summarized as follows:

- The sum of TCE concentrations in Area 1 wells (IW-127, IW-141, IW-147, IW-152, IW-153, IW-157, MW-25, MW-38, MW-85, MW-86, MW-92, MW-93, MW-94, MW-95, MW-172, ITMW-11, ITMW-12, ITMW-15, ITMW-17, ITMW-18 and ITMW-19) decreased from an approximate baseline (September and October 2014) of 944,213 µg/L to approximately 343,904 µg/L in May 2016, roughly one year and six months following the last injection event in this area (~64% decrease), other notable decreases in TCE concentrations (greater than 85%) were observed at MW-85, MW-94, ITMW-18 and ITMW-19.
- The sum of TCE concentrations in wells in the supplemental neck area (IW-101, MW-23, MW-24, MW-83 and MW-84) decreased from approximately 1,296 µg/L to approximately 48 µg/L roughly seven months following the last injection event in this area for an approximate 96% decrease. No increasing TCE concentrations relative to baseline concentrations were measured.
- The sum of TCE concentrations in wells in Area 2 and Area 3 (MW-34, MW-35R, MW-36, MW-65, MW-81, MW-82, IW-77, IW-78, IW-79, IW-80 and IW-115) decreased from approximately 3,865 µg/L to approximately 546 µg/L roughly seven months following the last injection event in this area for an approximate 86% decrease. No increasing TCE concentrations relative to baseline concentrations were measured.

Overall TCE concentrations continue to decrease in the supplemental neck area and Areas 2 and 3 while remaining generally stable in Area 1 relative to the preceding sampling events.

5.1 Rebound

Rebound is a term used when concentrations of a COC in groundwater are observed to decrease following the implementation of a remediation technology and then increase at a later time. Rebound may be the result of back diffusion of COCs out of low permeability media; incomplete treatment of sorbed TCE followed by re-equilibration with the aqueous phase; or other processes[3].

[3] ISCO for Groundwater Remediation: Analysis of Field Applications and Performance; Krembs, Siegrist, Crimi, Furrer and Petri; Groundwater Monitoring and Remediation20, No. 4, Fall 2010, pages 42-53 (Peer reviewed reference).

Rebound is an expected phenomenon and is known, in particular, to be a common occurrence when using in-situ chemical oxidation (ISCO) as a source area remedy, as noted in the June 29, 2015, letter submitted to ADEQ titled Methods for Assessment of Constituent Concentration Rebound by Ramboll Environ. A rebound condition does not necessarily mean that the ISCO injection event has failed. Rebound can be an indication of the positive effects of the transfer of contaminants to the more treatable aqueous phase.

As discussed at length in the revised Groundwater Monitoring Plan (and in response to ADEQ requests), the calculation of rebound consists of comparing the pre-ISCO concentration in respective wells with the post-ISCO concentration. The pre-ISCO concentration is calculated as the average of the TCE concentrations for the four quarters or the year prior to performance of ISCO. Several wells used to monitor ISCO were installed immediately prior to performance of ISCO and therefore only limited data is available prior to the ISCO event for comparison.

Assessment of rebound also includes consideration of the variability (i.e. variability includes comparison of TCE concentrations, sodium persulfate concentrations and certain field parameters to within a range of variability of 10% or less over three consecutive monitoring events) of groundwater conditions at the respective monitoring wells, prior to assessing rebound. Only two monitoring wells in the ISCO treatment areas continue to exhibit variable TCE concentrations --MW-25 and MW-38 (see Table 1 in the revised Groundwater Monitoring Plan). Monitoring wells adjacent to Area 1 consisting of MW-93 and MW-95 also exhibit variable TCE concentrations. Monitoring wells exhibiting low variability consist of: the monitoring wells in Areas 2 and 3, those in the Neck Area, and ITMW-18 and ITMW-19 in Area 1. It is premature to assess rebound definitively in treatment areas that continue to exhibit variable TCE concentrations, sodium persulfate concentrations or field parameters. However, further monitoring of those identified wells is warranted and proposed, in order to facilitate any conclusive assessments of rebound at those specific locations.

A qualitative review of the data and comparison of pre-ISCO and post-ISCO concentrations (summarized in the revised Groundwater Monitoring Plan) indicates assessment of rebound should focus on MW-25 (noting variable conditions continue at this well). All other wells in the treatment areas exhibit significant concentration reductions with no indication of rebound (regardless of the quantitative computation used to calculate rebound), excluding MW-38 which currently exhibits less than effective ISCO treatment at this well. To simplify the assessment of rebound, in the future we will consider that if the TCE concentration in a respective well has consistently exhibited higher TCE concentrations post-ISCO compared to the pre-ISCO concentrations, then a rebound condition is considered to exist at that specific well.

6 ISCR Remedial Effectiveness

This section includes discussion of 2016 second quarter results for the ISCR Pilot Study being conducted in the northeast extent of the off-site TCE impacts near monitoring well MW-61R. A total of 4,844 gallons of ISCR reagents including 7,500 pounds of ProvectIR-40™ [40% by weight 20-30 micron zero valent iron (ZVI)], 660 pounds MgO and 13 L of DHC (SDC-9 consortium) inoculum were injected across three permeable reactive barrier (PRB) treatment zones in 44 temporary direct push injection points from September 29 through October 2, 2015 (Figure 13). Post injection monitoring for field water quality parameters (temperature, conductivity, DO, pH, ORP, ferrous iron), laboratory geochemical and biochemical indicators (total iron, manganese, sulfate, alkalinity, ammonia, phosphate, TOC and volatile fatty acid (VFA): acetate, propionate and butyrate), hydrogen and VOCs using EPA Method 5030B/8260 was conducted on October 8, 2015 (six days following the end of the injection event) at subsequent 30 day intervals through January 2016 and at 210 days after injection in May 2016 (see Table 15).

Observations regarding the field water quality data collected approximately 210 days post ISCR injection (concurrent with the Second Quarter event) are as follows:

- At MW-61R the 210 day results indicate sustained negative ORP beginning 20 days post injection (–152 mV) through May 2016 (-125 mV), very low DO over the same period (0 to 0.17 mg/L) and elevated specific conductance (2,190 to 1,250 µS/cm). Field pH reading of 6.79 SU is within the range considered neutral (6 to 8 standard units) and exceeds the baseline value of 6.22. The groundwater exhibited an organic odor and pale yellow color.
- At TMW-11 the ORP level remained negative (-150 mV in December 2015, -128 mV in January 2016 and -154mV in May), DO is still near zero (0.15 mg/L) and the specific conductance is elevated (2,512 µS/cm). The groundwater exhibited a strong organic odor. Field pH reading of 7.17 SU exceeds the baseline value of 6.52 SU.
- At TMW-10, DO and ORP decreased and the pH increased since January 2016.

Table 16 presents the laboratory analytical results for VOCs and various natural attenuation parameters. The results in Table 16 indicate that the ISCR injection promoted a significant increase in total iron, manganese, sulfate, alkalinity, ammonia, phosphate, TOC and VFA: acetate, propionate and butyrate in comparison to the baseline data for MW-61R and TMW-11. The increases in total iron, ferric iron and ferrous iron were due to the ZVI material associated with the ProvectIR-40™ product. Likewise, the ISCR injection also resulted in a significant increase in TOC, which was subsequently utilized by the indigenous and bio-augmented microbial populations to produce VFA. The VFAs increased by more than two to three orders of magnitude in MW-61R, which also promoted the production of hydrogen, which is used as the electron donor for reductive dechlorination of VOCs. At the 90 day sample point, there were still elevated levels of VFAs propionate and acetate in TMW-11.

Approximately 210 days following injection, laboratory results supporting continuation of ISCR at MW-61R and TMW-11 include the following:

- Elevated total and ferric iron;
- Elevated alkalinity and pH;
- Elevated methane and positive results for ethane and ethene; and
- Positive results for hydrogen and the presence of DHC.

Table 17 shows the TCE concentrations for MW-61R, TMW-10 and TMW-11 over time and the percent TCE reductions post 210 days injection of the ISCR reagent. Concentrations have fluctuated slightly but results still indicate 68% reduction and a 74% reduction in TCE levels in MW-61R and TMW-11, respectively, indicating significant reduction of TCE continues near these wells. The cis-1,2-DCE and ethene results in Table 16 demonstrate reductive dechlorination in the groundwater near these wells.

Evidence that the pilot process is affecting groundwater conditions near TMW-10 include:

- Increase in iron levels and alkalinity;
- Increase in cis-1,2-DCE concentrations;
- Increase in methane (1.3 to 700 µg/L), detection of ethane, ethene and hydrogen; and
- TCE concentration reductions ranging from 35-46%.

A summary of the field and analytical monitoring data is discussed below:

- Field water quality parameters and laboratory geochemical and biochemical analytical data indicate that the ISCR injection impacted MW-61R and TMW-11 within approximately one month post injection. Specifically, there was a significant reduction in DO and ORP in MW-61R and TMW-11.
- The increase in cis-1,2-DCE concentrations in MW-61R and TMW-11 in comparison to baseline levels over the first 90 days indicate that the ISCR injection enhanced microbial reductive dechlorination in the groundwater.
- TCE concentration reductions ranging from 54-98% at TMW-11 over the 210 days since the ISCR injection, which appear to be due to a combination of abiotic and biological reactions.
- There has been a 29-76% reduction in TCE at MW-61R since the ISCR injection which appears to be due to a combination of abiotic and biological reactions.
- There have been TCE reductions ranging from 35-46% in TMW-10 and cis-1,2-DCE levels have increased indicating reductive dechlorination is occurring.
- The sum of the TCE concentrations for MW-61R, TMW-10 and TMW-11, 210 days after ISCR injection, decrease from approximately 238 µg/L to 136 µg/L (~43% decrease).
- Cis-1,2-DCE levels are very low (decreased from January to May in MW-61R and TMW-11), VC remains non-detect in the presence of DCE and ethene is present indicating dechlorination is occurring to the end product ethene.

Reducing conditions have been sustained through the period of the pilot even with water table fluctuation(s) due to significant precipitation late 2015 resulting in a water table rise of 3 to 4 feet which brought additional oxygenated water into the area. Since late 2015, the water table has been dropping. The minor TCE concentration increases could be associated with microbial population being exposed to more of the soil column (due to the rise and subsequent fall of the water table) and additional desorption from the soil-water matrix as the water table declines resulting in the small TCE increases in the monitoring data.

7 Summary and Conclusions

Ramboll Environ performed the 2016 Second Quarter Groundwater Monitoring Event on behalf of Whirlpool on April 18, 2016, and during the week of May 2, 2016. The quarterly monitoring was conducted for collection of groundwater samples for analysis of VOCs and MNA parameters defined by the RADD as well as additional parameters not included in the RADD.

- The groundwater potentiometric surface observed during the Second Quarter event is generally consistent with that historically observed at the Site.
- The direction of the lateral hydraulic gradient continues to be influenced by a divide located just south of Ingersoll Avenue with directions of the hydraulic gradient predominantly to the northeast and south on either side of the general divide.
    - Groundwater north of the divide is flowing in a northeasterly direction; and
    - Groundwater south of the divide is flowing in a southern/southeasterly direction with a southwesterly trend south of the manufacturing building.
- Second Quarter event groundwater monitoring data shows generally decreasing to stable trends for TCE concentrations.
    - Plume boundary well data continue to show results generally consistent with historical TCE concentrations although trends in the northern portion of the plume near MW-61R have decreased due to ISCR injections;
    - Offsite well data are similar to previous monitoring events and continue to show generally decreasing to stable TCE concentration trends; and
    - Onsite well data continue to show generally decreasing to stable TCE concentration trends; although, the data has been influenced by the ISCO injections.
- The combination of chemical, geochemical and microbial data from the second quarter event are similar to the quarterly monitoring events in 2014 and 2015. The VOC results demonstrate that reductive dechlorination is occurring in multiple locations in the plume.
- The ISCO events performed in 2014 and 2015 continue to be effective with TCE concentration reductions as follows:
    - Approximately 79% decrease since May 2014 at source area wells MW-25, MW-85 and MW-86;
    - Supplemental neck area decrease of approximately 96% since May 2014; and
    - Approximately 86% decrease since May 2014 at wells in Areas 2 and 3.
- The ISCR event performed in September/October 2015 is proving to be effective with TCE concentrations reducing as follows:
    - The TCE concentration in MW-61R has been reduced by 68% and the TCE concentration in TMW-11 has been reduced by 74% as of approximately 210 days after ISCR injection.

- The sum of TCE concentrations for wells monitored continue to show a decreasing concentration trend from approximately 238 µg/L to 136 µg/L (~43% decrease).

Notes:

ft = Feet
NA = Not available (not installed or abandoned/replaced)
nm = Not measured
1 = Construction diagram notes use of pre-packed stainless steel screen
2 = Construction diagram text and graphical representation differ on construction details. Graphical representation used to infer elevations
3 = Construction diagram notes presence of sedimentation sump below screened interval
Horizontal and vertical coordinates converted to Arkansas State Plane, North Zone (NAD83) and North American Vertical Datum of 1988 (NAVD88) based on in historic site file. Casing elevations for ITMW-1 through ITMW-21 and MW-22 extracted from 2011/2012 Annual Ground Water Monitoring Report dated June 28, 2012. information provided
Casing elevations for remaining wells extracted from survey data provided by Philip J. Leraris, PE, LS, dated May 12, 2009.
IW-129, IW-130, IW-131, and MW-81 to MW-99 surveyed during 2014.
Well screen intervals and depths adapted from monitoring well construction diagrams.

TABLE 4
SUMMARY OF FINAL WELL GROUND WATER FIELD PARAMETERS MEASUREMENTS
Whirlpool Facility - Fort Smith, Arkansas

Location	Well Casing Diameter (in)	Date Sampled	Water Level prior to Purging (ft btoc)	Total Depth of Well Casing (ft)	Set Tubing Depth (ft)	Time Sampled	Water Level after Purging (ft btoc)	Purge Volume (Gallons)	Purge Rate (ml/min)	Temperature (^{o}C)	Specific Conductivity (µS/cm)	DO (mg/L)	pH	ORP (mV)	Turbidity (NTUs)	Ferrous Iron (mg/L)	Persulfate (mg/L)	Color	Sample ID

Notes:

ft btoc = Feet below top of casing
in = Inches
ORP = Oxidation reduction potential
DO = Dissolved oxygen
(^{o}C) = Degrees Celcius
mV = Millivolts
^ = Well not sampled

mL/min = Milliliters per minute
mg/L = Milligrams per liter
NTUs = Nephelometric turbidity units
NM = Not measured
(µS/cm) = Microsiemens per centimeter
-- = Color not noted

All wells gauged using electronic water level meter and purged using peristaltic pumps.
Tubing inlet depths based on estimated distance from total depth.

Notes:
ft = Feet
[1] MW-56R and MW-63R were installed in June 2015
[2] Negative gradient indicates downward gradient
[3] Reference elevations used in vertical gradient calculations were changed from ground surface to top of casing for the First Quarter 2016 Annual Groundwater Monitoring Report.

Notes:

1 All concentrations are presented in ug/L except where noted.

2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all compounds are shown.

3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.

4 Concentration presented in nM = nanomolar. Sampling Method - Bubble Strip.

U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method

RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
NM = Not measured

Onsite Wells
Offsite Wells
Plume Boundary Wells

Notes:

1 All concentrations are presented in ug/L except where noted.

2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all compounds are shown.

3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.

4 Concentration presented in nM = nanomolar. Sampling Method - Bubble Strip.

U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method

RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
NM = Not measured

Onsite Wells
Offsite Wells
Plume Boundary Wells

Notes:
1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all compounds are shown.
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble Strip.
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
NM = Not measured

Notes:
1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all compounds are shown.
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble Strip.
U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
NM = Not measured

Onsite Wells

Notes:

1 All concentrations are presented in ug/L except where noted.

2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all compounds are shown.

3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.

4 Concentration presented in nM = nanomolar. Sampling Method - Bubble Strip.

U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method

RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
NM = Not measured

Onsite Wells
Offsite Wells
Plume Boundary Wells

Notes:

1 All concentrations are presented in ug/L except where noted.
2 Only compounds with at least one detection are shown, with the exception of Monitored Natural Attenuation Parameters, for which all compounds are shown.
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.
4 Concentration presented in nM = nanomolar. Sampling Method - Bubble Strip.

U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method

RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per Liter
mL = Milliliters
NE = Not established
NM = Not measured

Onsite Wells
Offsite Wells
Plume Boundary Wells

TABLE 6
SUMMARY OF MONITORING WELL GROUNDWATER SAMPLE ANALYTICAL RESULTS
(SECOND QUARTER 2016)
Whirlpool Facility - Fort Smith, Arkansas

Notes:

E,J: Estimated Concentration

ND: Result is not detected at the associated method quantitation limit

NT: Analyte not tested

U: Not detected (MDL included where available, RDL included for older analyses)

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Notes:

µS/cm = MicroSiemens per centimeter
mg/L = Miligrams per liter
ND = Not detected
TOC = Top of casing
DO = Dissolved oxygen
ORP = Oxidation reduction potential
mV = Millivolts
* = Inconclusive test

Injection intervals: 8 to 10 feet (ft) below ground surface (bgs) and 10 to 12 ft., bgs (see boring logs for modification of injection intervals).
Injection pressures: 150 psi air surge to clear injection rod ports and develop pathway-breakout, injection pressures 80 to 100 psi at injection pump.
Injection solution at each depth interval: 85.2 pounds (lbs) Provectus IR; 7.5 (lbs) MgO; 0.15 lbs DHC inoculum; (55 gallons total solution).
10/1/15, 15:08 hours, pressurization, gurgling TMW-10 during injection at IP-34.
10/1/15, 15:52 hours, pressurization, gurgling MW-61R during injection at IP-12.
10/2/15, 10:06 hours, pressurization, TMW-11 well cap displaced during injection at IP-26.
10/2/15, yellow GW, solids, yeast-odor MW-61R.
10/2/15, yellow GW, solids, yeast-odor TMW-11.

Notes:
1 All concentrations are presented in ug/L except where noted.
2 All compounds are shown.
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.

U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per liter
mL = Milliliters
NE = Not established
NM = Not measured

Vinyl Chloride Reductase (vrcA) [cells/mL]	NE	NM	NM	NM	NM	U (8.33)	U (3.33)

Notes:
1 All concentrations are presented in ug/L except where noted.
2 All compounds are shown.
3 Concentrations that exceed the Remedial Action Levels per ADEQ RADD Issued Dec 2013 are double underlined.

U = Not detected
J = Estimated concentration
d = The analyte concentration was determined from a dilution.
( ) = Method detection limit for VOCs; reporting limit for all other parameters
* = Sampled on different day than other parameters with different method
RADD = Remedial action decision document
ADEQ = Arkansas Department of Environmental Quality
VOC = Volatile organic compounds
µg/L = Micrograms per liter
mL = Milliliters
NE = Not established
NM = Not measured

TABLE 17
SUMMARY OF TCE CONCENTRATIONS (ISCR PILOT STUDY)
Whirlpool Facility - Fort Smith, Arkansas

Event	Date(s)	MW-61R	TMW-10	TMW-11
Baseline	9/18/2015	16.5	190	31.1
4Q monitoring (6 days post)	10/8/2015	11.7	102	14.3
30 days after injection	11/5/2015	9.2	120	6.3
60 days after injection	12/1/2015	5	114	0.63
90 days after injecton	1/8/2016	3.9	103	3.1
210 days after injecton	5/3/2016 & 5/4/2016	5.3	123	8.1
	Percent Reduction	67.9%	35.3%	74.0%

Second Quarter 2016 Calibration Logs

Whirlpool Ft. Smith Field Equipment Calibration Checklist

Date: 5/2/16

Calibrated by: Mike Cleming

Turn on YSI. Note time in DO section Line 1.

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 566892 **Exp:** 7-31-16

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8306 **Exp:** 11/2019

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 566637 **Exp:** 7-31-17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 4A61132 **Exp:** 7/2016
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 56K154 **Exp:** 11-30-17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1105 + 10min = 1115
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.12 in. x 25.4 = 765.048 mmHg - 15.169 = 749.879 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:

YSI – Serial Number: 13J102654

1. Specific Conductance: 1.154 / 1.413
2. ORP: 244.5 / 240.1
3. pH:
   - Point 1: 7.01 / ~~7.04~~ 7.00
   - Point 2: 4.06 / 4.00
   - Point 3: 10.15 / 10.02
4. DO: 98.3 / 98.7

Turbidity Meter Model/Serial Number: Lamotte 2020we / 1865

Whirlpool Ft. Smith Field Equipment Calibration Checklist

Date: 6/2/2016

Calibrated by: WES

Turn on YSI. Note time in DO section Line 1.

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 5GG892 **Exp:** 7/31/2016

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8306 **Exp:** 11/2019

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5GG637 **Exp:** 7/31/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 4AG1032 **Exp:** July/2016
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5GK154 **Exp:** 11/30/17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1245 + 10min = 1255
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.09 in. x 25.4 = 764.3 mmHg - 15.169 = 749.117 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:

YSI – Serial Number: 14F100057

1. Specific Conductance: 1.413
2. ORP: 240.0
3. pH:
   - Point 1: 7.00
   - Point 2: 4.00
   - Point 3: 9.97
4. DO: 103%

Date: 5/2/16

Calibrated by: NZ

Turn on YSI. Note time in DO section Line 1.

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 5GG892 **Exp:** 7/16

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8832 **Exp:** 4/20

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC488 **Exp:** 3/31/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC304 **Exp:** 3/17
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AA164 **Exp:** 1/17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1046 + 10min = 1056
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.09 in. x 25.4 = 764.286 mmHg - 15.169 = 749.117 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Whirlpool Ft. Smith Field Equipment Calibration Checklist

Date: 5/2/16

Calibrated by: Victoria Swigen

Turn on YSI. Note time on line 38!

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 12105 **Exp:** 3/18/17

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8752 **Exp:** 4/30/2020

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 2308700 **Exp:** 7/31/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 2510033 **Exp:** 10/2017
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 2601666 **Exp:** 6/2017
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1033 + 10min = 1043
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.10 in. x 25.4 = 764.54 mmHg - 15.169 = 749.371 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 6GB188 **Exp:** 02/28/2018
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 1104 + 10min = 1114
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.09 in. x 25.4 = 764.286 mmHg - 15.169 = 749.117 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:

YSI – Serial Number: 14A100108

1. Specific Conductance: 1.163
2. ORP: 244.8 → 240
3. pH:

9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 6GB188 **Exp:** 02/28/2018
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 0705 + 10min = 0715
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.09 in. x 25.4 = 764.286 mmHg - 15.169 = 749.117 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:

YSI – Serial Number: 14A100108

1. Specific Conductance: 1352 → 1413
2. ORP: 243.4 → 240
3. pH:
   - Point 1: 6.98 → 7.00
   - Point 2: 4.03 → 4.00
   - Point 3: 10.07 → 10.01
4. DO: 104.2 → 98.6%

Turn on YSI. Note time on line 38!

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 1210 S **Exp:** 3/15/17

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8752 **Exp:** 4/30/20

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 2505700 **Exp:** 7/31/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 2516C33 **Exp:** 10/20/17
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 26016665 **Exp:** 6/17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 0706 + 10min = 0716
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.10 in. x 25.4 = 764.54 mmHg - 15.169 = 749.371 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 0710 + 10min = 0720
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   29.97 in. x 25.4 = 761.24 mmHg - 15.169 = 746.069 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:

YSI – Serial Number:

1. Specific Conductance: 1381
2. ORP: 248.2
3. pH:
   - Point 1: 6.93
   - Point 2: 4.08
   - Point 3: 9.93
4. DO: 10.1

   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.04 in. x 25.4 = 763.016 mmHg - 15.169 = 747.847 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:
YSI – Serial Number: 031454

1. Specific Conductance: 1413
2. ORP: 240
3. pH:
   - Point 1: 7.0
   - Point 2: 4.0
   - Point 3: 10.02
4. DO: 98.4 %

Turbidity Meter Model/Serial Number: 018829

RAMBOLL ENVIRON

Whirlpool Ft. Smith Field Equipment Calibration Checklist

Date: 5/5/16

Calibrated by: H. Butterfield

Turn on YSI. Note time in DO section Line 1.

Specific Conductance calibration (should take *at least* 1.5 minutes): **Lot #:** 5AG892 **Exp:** July/16

1. Pour conductivity standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in specific conductance. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

ORP calibration (should take *at least* 1.5 minutes): **Lot #:** 8832 **Exp:** 04/2020

1. Pour ORP (Zobell) standard into calibration cup and immerse sensor.
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in ORP. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.

3-Point pH calibration (should take *at least* 4.5 minutes):

1. Pour pH 7.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC488 **Exp:** 3/31/17
2. Allow *1 minute* for temperature stabilization.
3. Press "calibrate" after *30 seconds* of no significant change in pH. Note below.
4. Discard used calibration standard, and rinse calibration cup and probes with DI water.
5. Pour pH 4.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AC304 **Exp:** Mar/17
6. Allow *1 minute* for temperature stabilization.
7. Press "calibrate" after *30 seconds* of no significant change in pH. Note standard below.
8. Discard used calibration standard, and rinse calibration cup and probes with DI water.
9. Pour pH 10.0 standard into the calibration cup and immerse pH sensor. **Lot #** 5AA164 **Exp:** Jan/17
10. Allow *1 minute* for temperature stabilization.
11. Press "calibrate" after *30 seconds* of no significant change in pH. Note below
12. Discard used calibration standard, and rinse calibration cup and probes with DI water.

Dissolved Oxygen (% DO) calibration (should take *at least* 10 minutes):

1. Ensure unit has been on for at least 10 minutes: Initial time: 0706 + 10min = 0716
2. Enter the local barometric pressure.
   (Note: to convert from inches (common on a weather app or forecast) to mmHg, multiply by 25.4, then to correct to Ft. Smith's altitude, subtract 15.169 mmHg.)
   30.01 in. x 25.4 = 762.254 mmHg - 15.169 = 747.085 mmHg
3. Place ~3mm of DI water in the bottom of the calibration cup.
4. Lightly screw on the calibration cup (only 1 or 2 threads!)
5. Allow *10 minutes* for the air in the cup to become water-saturated and temp to stabilize.
6. Press "calibrate" after *30 seconds* of no significant change in DO. Note below.
7. Discard used DI water, and rinse calibration cup and probes with DI water.

Turbidity calibration:

1. Select "measure" on the main menu, then "Turbidity – With Blank"
2. Scan a sample using the 0.0 NTU Blank solution. "Scan Blank"
3. Scan a sample using the 10 NTU standard. "Scan Sample"
4. Select "Calibrate," then use the arrow buttons to adjust the value to the standard (10.0 NTU).

Field Notebook calibration entry:

YSI – Serial Number: 11K100340

1. Specific Conductance: 1,413 $\mu S/cm^3$
2. ORP: 240.0
3. pH:
   - Point 1: 7.00
   - Point 2: 4.01
   - Point 3: 10.02
4. DO: 98.2%

RE: Project: FORT SMITH, AR
Pace Project No.: 60217246

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on April 19, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Revised Report Rev_1

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60217246

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
3 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60217246

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
3 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60217246

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
4 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/75403

B: Analyte was detected in the associated method blank.
- BLANK for HBN 427912 [MSV/7540 (Lab ID: 1747343)
  - cis-1,2-Dichloroethene

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75403

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60217246

Method: **SM 4500-H+B**
Description: 4500H+ pH, Electrometric
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
3 samples were analyzed for SM 4500-H+B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H6: Analysis initiated outside of the 15 minute EPA required holding time.
- MW-31R-201604 (Lab ID: 60217246001)
- MW-32R-201604 (Lab ID: 60217246002)
- MW-33R-201604 (Lab ID: 60217246003)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

Batch Comments:

Field pH
- QC Batch: WET / 61809

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60217246

Method: **SM 4500-S-2 D**
Description: 4500S2D Sulfide, Total
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
3 samples were analyzed for SM 4500-S-2 D. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: WET/61361

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60217139012

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1745458)
  - Sulfide, Total
- MSD (Lab ID: 1745459)
  - Sulfide, Total

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60217246

Method: **EPA 300.0**
Description: 300.0 IC Anions 28 Days
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
3 samples were analyzed for EPA 300.0. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60217246

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/75403

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: WET/61805

[1] Ferrous Fe performed in the field

Batch: WET/61809

[1] Field pH

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Fort Smith, AR Pace Energy Lab
Pace Project No.: 60217878

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on April 19, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

RE: **FORT SMITH, AR / 3437500P**
Pace Workorder: 18801

Dear Colleen Clyne:

Enclosed are the analytical results for sample(s) received by the laboratory on Tuesday, April 19, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 04/26/2016

LABORATORY ACCREDITATIONS & CERTIFICATIONS

Accreditor:	Pennsylvania Department of Environmental Protection, Bureau of Laboratories
Accreditation ID:	02-00538
Scope:	NELAP Non-Potable Water and Solid & Hazardous Waste
Accreditor:	South Carolina Department of Health and Environmental Control, Office of Environmental Laboratory Certification
Accreditation ID:	89009003
Scope:	Clean Water Act (CWA); Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: New Jersey, Department of Environmental Protection
Accreditation ID:	PA026
Scope:	Non-Potable Water; Solid and Chemical Materials
Accreditor:	NELAP: New York, Department of Health Wadsworth Center
Accreditation ID:	11815
Scope:	Non-Potable Water; Solid and Hazardous Waste
Accreditor:	State of Connecticut, Department of Public Health, Division of Environmental Health
Accreditation ID:	PH-0263
Scope:	Clean Water Act (CWA) Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: Texas, Commission on Environmental Quality
Accreditation ID:	T104704453-09-TX
Scope:	Non-Potable Water
Accreditor:	State of New Hampshire
Accreditation ID:	299409
Scope:	Non-potable water
Accreditor:	State of Georgia
Accreditation ID:	Chapter 391-3-26
Scope:	As per the Georgia EPD Rules and Regulations for Commercial Laboratories, PAES is accredited by the Pennsylvania Department of Environmental Protection Bureau of Laboratories under the National Environmental Laboratory Approval Program (NELAC).

ANALYTICAL RESULTS QUALIFIERS

Workorder: 18801 FORT SMITH, AR / 3437500P

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.
B	The analyte was detected in the associated blank.

RE: Project: FORT SMITH, AR
Pace Project No.: 60218184

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 03, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218184

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
12 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

Pace Project No.: 60218184

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
12 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218184

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
17 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75624

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60218184006,60218184012

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1753107)
  - Trichloroethene

R1: RPD value was outside control limits.

- MSD (Lab ID: 1753106)
  - 1,1,2,2-Tetrachloroethane
  - Dibromochloromethane
- MSD (Lab ID: 1753108)
  - Styrene
  - Trichloroethene

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60218184

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: WET/61805

[1] Ferrous Fe performed in the field

Batch: WET/61809

[1] Field pH

Batch: WET/61838

[1] Ferrous Fe performed in the field

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

Sample Condition Upon Receipt

WO#: 60218184

60218184

Client Name: Environ

Optional
Proj Due Date:
Proj Name:

Courier: FedEx ☐ UPS ☐ VIA ☑ Clay ☐ PEX ☐ ECI ☐ Pace ☐ Other ☐ Client ☐

Tracking #: Pace Shipping Label Used? Yes ☐ No ☑

Custody Seal on Cooler/Box Present: Yes ☑ No ☐ Seals intact: Yes ☑ No ☐ pu 5/3/16

Packing Material: Bubble Wrap ☐ Bubble Bags ☑ Foam ☐ None ☐ Other ☐

Thermometer Used: CF +1.0 T-239 / CF 0.0 T-262 **Type of Ice:** Wet Blue None ☐ Samples received on ice, cooling process has begun. (circle one)

Cooler Temperature: 3-7/3-0/2.9

Temperature should be above freezing to 6°C

Date and initials of person examining contents: IM 5/3/16

Chain of Custody present:	☑Yes ☐No ☐N/A	1.
Chain of Custody filled out:	☑Yes ☐No ☐N/A	2.
Chain of Custody relinquished:	☑Yes ☐No ☐N/A	3.
Sampler name & signature on COC:	☑Yes ☐No ☐N/A	4.
Samples arrived within holding time:	☑Yes ☐No ☐N/A	5.
Short Hold Time analyses (<72hr): pu 5/3/16	☑Yes ☐No ☐N/A	6. NO2/NO3 pH
Rush Turn Around Time requested:	☐Yes ☑No ☐N/A	7.
Sufficient volume:	☑Yes ☐No ☐N/A	8. Receive with TB.
Correct containers used:	☑Yes ☐No ☐N/A	I = TB1 II = TB2 III = TB3
Pace containers used:	☑Yes ☐No ☐N/A	9.
Containers intact:	☑Yes ☐No ☐N/A	10.
Unpreserved 5035A soils frozen w/in 48hrs?	☐Yes ☐No ☑N/A	11.
Filtered volume received for dissolved tests?	☐Yes ☐No ☑N/A	12.
Sample labels match COC: Includes date/time/ID/analyses Matrix: WT	☑Yes ☐No ☐N/A	13.
All containers needing preservation have been checked.	☑Yes ☐No ☐N/A	
All containers needing preservation are found to be in compliance with EPA recommendation.	☑Yes ☐No ☐N/A	14.
Exceptions: VOA, Coliform, O&G, WI-DRO (water)	☑Yes ☐No	Initial when completed / Lot # of added preservative
Trip Blank present: Pace Trip Blank lot # (if purchased): 070716-3	☑Yes ☐No ☐N/A	15.
Headspace in VOA vials (>6mm):	☐Yes ☑No ☐N/A	16.
Project sampled in USDA Regulated Area:	☐Yes ☐No ☑N/A	17. List State:
Additional labels attached to 5035A vials in the field?	☐Yes ☐No ☑N/A	18.

RE: Project: FORT SMITH, AR
Pace Project No.: 60218192

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 03, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218192

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 12, 2016

General Information:
3 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60218192

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: FORT SMITH, AR
Pace Project No.: 60218288

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory between May 04, 2016 and May 05, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218288

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
18 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218288

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
18 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60218288

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/75619
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75661
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75668
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75701
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75745
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: WET/61811
[1] Ferrous Fe performed in the field

BATCH QUALIFIERS

Batch: WET/61849

[1] Ferrous fe performed in the field

ANALYTE QUALIFIERS

1e Total iron was confirmed.
B Analyte was detected in the associated method blank.
H6 Analysis initiated outside of the 15 minute EPA required holding time.
M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Unpreserved 5035A soils frozen w/in 48hrs?	☐Yes	☐No	☑N/A	11. TB-05 = 11
Filtered volume received for dissolved tests?	☐Yes	☐No	☑N/A	12. TB-06-1 = 111
Sample labels match COC:	☑Yes	☐No	☐N/A	TB-06-2 = 1111
Includes date/time/ID/analyses Matrix: WT				13.
All containers needing preservation have been checked.	☑Yes	☐No	☐N/A	
All containers needing preservation are found to be in compliance with EPA recommendation.	☑Yes	☐No	☐N/A	14.
Exceptions: VOA, Coliform, O&G, WI-DRO (water)	☑Yes	☐No		Initial when completed / Lot # of added preservative
Trip Blank present:	☑Yes	☐No	☐N/A	
Pace Trip Blank lot # (if purchased): Cover				15.
Headspace in VOA vials (>6mm):	☐Yes	☑No	☐N/A	
				16.
Project sampled in USDA Regulated Area:	☐Yes	☐No	☑N/A	17. List State:
Additional labels attached to 5035A vials in the field?	☐Yes	☐No	☑N/A	18.

Client Notification/ Resolution: Copy COC to Client? Y / (N) Field Data Required? Y / (N)

Person Contacted: Date/Time:

Comments/ Resolution: Emailed Wendy about COC discrepancies. CBC 5/4/16
Per Wendy - will send MW-36R tonight. DUP-03 for VOCs only. 1 trip blank should be TB-07. CBC 5/4/16

Project Manager Review: CBC Date: 5/4/16

Pace Project No.: 60218294

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 04, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218294

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
4 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
4 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60218294

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/75668

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: WET/61813

[1] Ferrous Fe perfromed in the field

Batch: WET/61817

[1] Field pH

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: FORT SMITH, AR
Pace Project No.: 60218387

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 05, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218387

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
26 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218387

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
26 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MPRP/35784

B: Analyte was detected in the associated method blank.
- BLANK for HBN 429138 [MPRP/357 (Lab ID: 1752464)
  - Iron

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218387

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
44 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

QC Batch: MSV/75679

S0: Surrogate recovery outside laboratory control limits.
- MW-24-201605 (Lab ID: 60218387023)
  - Toluene-d8 (S)

QC Batch: MSV/75721

S0: Surrogate recovery outside laboratory control limits.
- IW-76-201605 (Lab ID: 60218387016)
  - Toluene-d8 (S)

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MSV/75679

B: Analyte was detected in the associated method blank.
- BLANK for HBN 429656 [MSV/7567 (Lab ID: 1755407)
  - Chloroform

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75619

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 17, 2016

QC Batch: MSV/75654

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/75668

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/75679

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60218387020,60218387021

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MSD (Lab ID: 1755410)
  - Acetone

R1: RPD value was outside control limits.

- MSD (Lab ID: 1755410)
  - Acetone
- MSD (Lab ID: 1755412)
  - 1,1-Dichloroethane
  - Chloroform

QC Batch: MSV/75701

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/75721

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60218544005

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1756183)
  - Styrene
- MSD (Lab ID: 1756184)
  - Styrene

QC Batch: MSV/75745

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218387

Method: **SM 2320B**
Description: 2320B Alkalinity
Client: Ramboll Environ_AR
Date: May 17, 2016

General Information:
26 samples were analyzed for SM 2320B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Duplicate Sample:
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

Pace Analytical Services, Inc.
9608 Loiret Blvd.
Lenexa, KS 66219
(913)599-5665

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60218387

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/75619
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75654
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75668
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75701
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: MSV/75745
[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.
Batch: WET/61823
[1] Ferrous Fe performed in the field
Batch: WET/61824
[1] Ferrous Fe performed in the field
Batch: WET/61835
[1] Field pH

Pace Project No.: 60218387

BATCH QUALIFIERS

Batch: WET/61836

[1]	Field pH

ANALYTE QUALIFIERS

B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.
S0	Surrogate recovery outside laboratory control limits.
S8	Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-extraction and/or re-analysis)

Sample Condition Upon Receipt

WO# : 60218387

60218387

Client Name: Environ

Optional
Proj Due Date:
Proj Name:

Courier: FedEx ☐ UPS ☐ VIA ☑ Clay ☐ PEX ☐ ECI ☐ Pace ☐ Other ☐ Client ☐

Tracking #: _____ Pace Shipping Label Used? Yes ☐ No ☐

Custody Seal on Cooler/Box Present: Yes ☑ No ☐ Seals intact: Yes ☑ No ☐

Packing Material: Bubble Wrap ☐ Bubble Bags ☑ Foam ☑ None ☐ Other ☐

Thermometer Used: CF +1.0 T-239 / CF 0.0 T-262 **Type of Ice:** (Wet) Blue None ☐ Samples received on ice, cooling process has begun.
(circle one)

Cooler Temperature: 2.9 2.5 3.3 1.9 2.2

Temperature should be above freezing to 6°C 2.6 2.8

Date and initials of person examining contents: 05/05/16

Chain of Custody present:	☑Yes ☐No ☐N/A	1.
Chain of Custody filled out:	☑Yes ☐No ☐N/A	2.
Chain of Custody relinquished:	☑Yes ☐No ☐N/A	3.
Sampler name & signature on COC:	☑Yes ☐No ☐N/A	4.
Samples arrived within holding time:	☑Yes ☐No ☐N/A	5.
Short Hold Time analyses (<72hr):	☑Yes ☐No ☐N/A	6. NO2 NO3
Rush Turn Around Time requested:	☐Yes ☑No ☐N/A	7.
Sufficient volume:	☑Yes ☐No ☐N/A	8.
Correct containers used:	☑Yes ☐No ☐N/A	
Pace containers used:	☑Yes ☐No ☐N/A	9.
Containers intact:	☑Yes ☐No ☐N/A	10.
Unpreserved 5035A soils frozen w/in 48hrs?	☐Yes ☐No ☑N/A	11.
Filtered volume received for dissolved tests?	☐Yes ☐No ☐N/A	12.
Sample labels match COC:	☑Yes ☐No ☐N/A	
Includes date/time/ID/analyses Matrix: WT		13.
All containers needing preservation have been checked.	☑Yes ☐No ☐N/A	
All containers needing preservation are found to be in compliance with EPA recommendation.	☑Yes ☐No ☐N/A	14.
Exceptions: VOA, Coliform, O&G, WI-DRO (water)	☑Yes ☐No	Initial when completed / Lot # of added preservative
Trip Blank present:	☑Yes ☐No ☐N/A	
Pace Trip Blank lot # (if purchased): covered		15.
Headspace in VOA vials (>6mm):	☐Yes ☑No ☐N/A	16.
Project sampled in USDA Regulated Area:	☐Yes ☐No ☑N/A	17. List State:
Additional labels attached to 5035A vials in the field?	☐Yes ☐No ☑N/A	18.

RE: Project: FORT SMITH, AR
Pace Project No.: 60218425

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 05, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218425

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 13, 2016

General Information:
4 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75701

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

QC Batch: MSV/75721

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60218544005

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1756183)
  - Styrene
- MSD (Lab ID: 1756184)
  - Styrene

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: FORT SMITH, AR
Pace Project No.: 60218425

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-K Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: MSV/75701

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

RE: Project: Fort Smith, AR Pace Energy Lab
Pace Project No.: 60218428

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 04, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

ANALYTICAL RESULTS QUALIFIERS

Workorder: 18967 FORT SMITH, AR / 60218428

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

RE: Project: Fort Smith, AR
Pace Project No.: 60218488

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 04, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60218488

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 12, 2016

General Information:
3 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75668

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60218488

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Fort Smith, AR
Pace Project No.: 60218489

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 04, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Revised Report Rev_1

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60218489

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: June 14, 2016

General Information:
2 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75668

A matrix spike/matrix spike duplicate was not performed due to insufficient sample volume.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60218489

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: Project: Fort Smith, AR
Pace Project No.: 60218530

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 06, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60218530

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
1 sample was analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

Pace Project No.: 60218530

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
1 sample was analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MPRP/35833

B: Analyte was detected in the associated method blank.
- BLANK for HBN 429562 [MPRP/358 (Lab ID: 1754898)
  - Manganese

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

PROJECT NARRATIVE

Project: Fort Smith, AR
Pace Project No.: 60218530

Method: **EPA 5030B/8260**
Description: 8260 MSV
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
2 samples were analyzed for EPA 5030B/8260. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Internal Standards:
All internal standards were within QC limits with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

QC Batch: MSV/75721

A matrix spike and/or matrix spike duplicate (MS/MSD) were performed on the following sample(s): 60218544005

M1: Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

- MS (Lab ID: 1756183)
  - Styrene
- MSD (Lab ID: 1756184)
  - Styrene

QUALIFIERS

Project: Fort Smith, AR
Pace Project No.: 60218530

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-D	Pace Analytical Services - Dallas
PASI-K	Pace Analytical Services - Kansas City

BATCH QUALIFIERS

Batch: WET/61838

[1]	Ferrous Fe performed in the field

ANALYTE QUALIFIERS

1e	Field pH
B	Analyte was detected in the associated method blank.
H6	Analysis initiated outside of the 15 minute EPA required holding time.
M1	Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
R1	RPD value was outside control limits.

RE: Project: Fort Smith, AR Pace Energy Lab
Pace Project No.: 60218542

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory between May 05, 2016 and May 06, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne
colleen.clyne@pacelabs.com
Project Manager

RE: **FORT SMITH, AR**
Pace Workorder: 19051

Dear Colleen Clyne:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, May 06, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 05/17/2016

Accreditor:	Pennsylvania Department of Environmental Protection, Bureau of Laboratories
Accreditation ID:	02-00538
Scope:	NELAP Non-Potable Water and Solid & Hazardous Waste
Accreditor:	South Carolina Department of Health and Environmental Control, Office of Environmental Laboratory Certification
Accreditation ID:	89009003
Scope:	Clean Water Act (CWA); Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: New Jersey, Department of Environmental Protection
Accreditation ID:	PA026
Scope:	Non-Potable Water; Solid and Chemical Materials
Accreditor:	NELAP: New York, Department of Health Wadsworth Center
Accreditation ID:	11815
Scope:	Non-Potable Water; Solid and Hazardous Waste
Accreditor:	State of Connecticut, Department of Public Health, Division of Environmental Health
Accreditation ID:	PH-0263
Scope:	Clean Water Act (CWA) Resource Conservation and Recovery Act (RCRA)
Accreditor:	NELAP: Texas, Commission on Environmental Quality
Accreditation ID:	T104704453-09-TX
Scope:	Non-Potable Water
Accreditor:	State of New Hampshire
Accreditation ID:	299409
Scope:	Non-potable water
Accreditor:	State of Georgia
Accreditation ID:	Chapter 391-3-26
Scope:	As per the Georgia EPD Rules and Regulations for Commercial Laboratories, PAES is accredited by the Pennsylvania Department of Environmental Protection Bureau of Laboratories under the National Environmental Laboratory Approval Program (NELAC).

ANALYTICAL RESULTS QUALIFIERS

Workorder: 19051 FORT SMITH, AR

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

NON-CONFORMANCE FORM

PAES Work Order #: 19051

Date: 5.6.16 Time of Receipt: 1150 Receiver: LJ

Client: Environ

REASON FOR NON-CONFORMANCE

1. All samples' vials & samples on 1st COC had date & 5/3/16.
2. MW-23-201605: No time on vials.
3. Received 13 additional samples Not on COC 5/9/16:
MW-65-201605: Vials ID was MW-85-201605, with same date & time of collection.

RE: **FORT SMITH, AR**
Pace Workorder: *19052*

Dear Colleen Clyne:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, May 06, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh

ANALYTICAL RESULTS QUALIFIERS

Workorder: 19052 FORT SMITH, AR

DEFINITIONS/QUALIFIERS

Disclaimer : The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.

MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

NON-CONFORMANCE FORM

PAES Work Order #: 19052

Date: 5/6/16 Time of Receipt: 1150 Receiver: LJ

Client: Environ

REASON FOR NON-CONFORMANCE

1. All samples' vials & samples on 1st COC had date & 5/3/16.

2. MW-23-201605: No time on vials.

3. Received 13 additional samples Not on COC.

5/9/16:

MW-65-201605: Vials ID was MW-85-201605, with same date & time & collection.

RE: **FORT SMITH, AR**
Pace Workorder: *19054*

Dear Colleen Clyne:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, May 06, 2016. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Ruth Welsh 05/18/2016

ANALYTICAL RESULTS QUALIFIERS

Workorder: 19054 FORT SMITH, AR

DEFINITIONS/QUALIFIERS

Disclaimer :	The Pennsylvania Department of Environmental Protection (PADEP) has decided to no longer recognize analyses that do not produce data for primary compliance, for NELAP accreditation. The methods affected by this decision are AM20GAx, AM21G, SW846 7199 and AM4.02. The laboratory shall continue to administer the NELAP/TNI standard requirements in the performance of these methods.
MDL	Method Detection Limit. Can be used synonymously with LOD; Limit Of Detection.
PQL	Practical Quanitation Limit. Can be used synonymously with LOQ; Limit Of Quantitation.
ND	Not detected at or above reporting limit.
DF	Dilution Factor.
S	Surrogate.
RPD	Relative Percent Difference.
% Rec	Percent Recovery.
U	Indicates the compound was analyzed for, but not detected at or above the noted concentration.
J	Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (PQL).
n	The laboratory does not hold NELAP/TNI accreditation for this method or analyte.

NON-CONFORMANCE FORM

PAES Work Order #: 190524

Date: 5 6 16 Time of Receipt: 1150 Receiver: CJ

Client: Enviro

REASON FOR NON-CONFORMANCE

1. All samples' vials & samples on 1st COC had date & 5/3/16

2. MW-23-201605: No time on vials.

3. Received 13 additional samples Not on COC.

5/9/16:

MW-65-201605: Vials ID was MW-85-201605, with same date & time & collection

ACTION TAKEN

RE: Project: FORT SMITH, AR
Pace Project No.: 60218544

Dear Wendy Stonestreet:
Enclosed are the analytical results for sample(s) received by the laboratory on May 06, 2016. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Colleen Clyne

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218544

Method: **EPA 8015 - Alcohol**
Description: Alcohol by Direct Inject GCFID
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
28 samples were analyzed for EPA 8015 - Alcohol. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Surrogates:
All surrogates were within QC limits with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This report shall not be reproduced, except in full,

PROJECT NARRATIVE

Project: FORT SMITH, AR
Pace Project No.: 60218544

Method: **EPA 6010**
Description: 6010 MET ICP
Client: Ramboll Environ_AR
Date: May 24, 2016

General Information:
28 samples were analyzed for EPA 6010. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

Sample Preparation:
The samples were prepared in accordance with EPA 3010 with any exceptions noted below.

Initial Calibrations (including MS Tune as applicable):
All criteria were within method requirements with any exceptions noted below.

Continuing Calibration:
All criteria were within method requirements with any exceptions noted below.

Method Blank:
All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

QC Batch: MPRP/35833

B: Analyte was detected in the associated method blank.
- BLANK for HBN 429562 [MPRP/358 (Lab ID: 1754898)
  - Manganese

Laboratory Control Spike:
All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Date: May 24, 2016

General Information:
28 samples were analyzed for SM 4500-H+B. All samples were received in acceptable condition with any exceptions noted below or on the chain-of custody and/or the sample condition upon receipt form (SCUR) attached at the end of this report.

Hold Time:
The samples were analyzed within the method required hold times with any exceptions noted below.

H6: Analysis initiated outside of the 15 minute EPA required holding time.
